plead for adoption as the most effective way to suppress this oppression.

Since voluntary unionism can meet all the demands of the social nature of man, those who accuse supporters of right-to-work laws of being influenced, consciously or unconsciously, by a condemned and outmoded social philosophy of laissez faire individualism simply because they seek to protect by right to work legislation the personal rights, liberty and conscience of the worker from oppression by modern compulsory unionism, would do well to mediate on the above words of the Holy Father.

Dare To Be Different

EXTENSION OF REMARKS
OF
HON. ROMAN C. PUCINSKI
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Monday, March 2, 1959

Mr. PUCINSKI. Mr. Speaker, the weekly Sunday supplement, This Week, carried an article in its March 1, 1959, issue entitled "Dare To Be Different" which I am today submitting for publication in the Appendix of the CONGRESSIONAL RECORD. I ask that this article by Adm. Hyman G. Rickover be included in the CONGRESSIONAL RECORD because it so graphically and daringly discusses one of the great problems confronting America today. That problem is a growing trend toward the cult of conformity.

The fact that Admiral Rickover, the father of Americas' atomic powered submarine, has had the courage to speak out on this subject is a refreshing interlude in an era when more and more great men of this Nation are being forced into conformity.

It is significant that Admiral Rickover should make his thoughts known to the public for he symbolizes the very essence of this problem. His personal struggle to persuade the Nation that an atomic powered submarine was feasible and his unselfish determination to prove this point is perhaps one of the great examples of an individual who refused to be a conformist.

The right to disagree; the right to speak out against overwhelming odds; the right to have courage to present new ideas is the very dynamics on which this wonderful Nation of ours was born.

Admiral Rickover grew up in Chicago. His patriotic parents still live in that great city. I am proud to be able today to call attention to his dramatic article and hope that his sober thoughts will be an inspiration to other Americans who are tragically slipping into the limbo of conformity.

Admiral Rickover's challenging article follows:

DARE TO BE DIFFERENT

(By Adm. Hyman G. Rickover)

"Whoso would be a man must be a nonconformist"—Emerson.

The ancient Locrians in Greece gave freedom of speech to all citizens—though at a cost which many must have considered too high. At public meetings, anyone could stand up and argue for changes in law or custom, on one condition. A rope was placed around his neck before he began to speak and if what he said did not meet with public approval, he was forthwith hanged.

Here in America, it would indeed be tragic if democracy deteriorated into mass tyranny over the unconventional individual. Democracy and equality do not require that we deny to the minority of people with creative minds the right to use them in their own way and to their fullest potential. People who use their minds successfully ought not to be expected to pretend they are just like everybody else.

We should then lose the diversity from which spring all great ideas; we should rob ourselves of the precious quality that distinguishes man from all other orders—his determination to think for himself, to be different.

Fighting Encephalitis With Surplus Property

EXTENSION OF REMARKS
OF
HON. B. F. SISK
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, March 2, 1959

Mr. SISK. Mr. Speaker, encephalitis is a major public-health problem in many parts of the Nation. In my State, according to records of the State of California Department of Public Health, the average yearly number of human infectious encephalitis cases reported from 1949 through 1958 was 447, of which an average of 93 were proven to be of mosquito-borne origin, and a great many more were suspected to be. In the three-county district of the San Joaquin Valley that I represent, the annual number of cases averaged 55, including 21 of mosquito-borne origin, during the same period.

Many victims of this dreaded disease died or suffered permanent brain damage.

An excellent report by Nate Haseltine on work done by Federal agencies in fighting encephalitis on an emergency basis was printed in the Washington Post and Times Herald of February 23, 1959.

However, we should remember that a key part of the public-health effort to suppress and eradicate encephalitis is the day-to-day control work done by mosquito abatement districts throughout the country. In a sense, this work might be called preventive medicine.

In California, almost $4 million a year is spent in this work by the State public-health department and more than 50 local operating mosquito abatement agencies.

I believe such districts should be aided in their assault on the carriers of this horrible disease when it is possible and practical to do so. One of the ways to help mosquito abatement districts would be to make them eligible to receive donable surplus Federal property. I can think of no better way in which certain equipment could be used in protecting human lives.

Under leave to extend my remarks in the RECORD, I include the part of Mr. Haseltine's article dealing with encephalitis:

U.S. DISEASE FIGHTERS—WHEN NATIONAL CENTER TACKLES A DEADLY EPIDEMIC

(By Nate Haseltine)

ATLANTA, GA., February 22.—Life here at the Communicable Disease Center, they tell you, is never dull. But it can become pretty routine for long stretches.

So Dr. Rudolf Donath, epidemic fighter, was not unhappy last August 22 when one such stretch ended with orders to pack up and travel. An outbreak of encephalitis had hit four counties in the Salt Lake Valleys of Utah.

Within an hour the epidemiologist was aboard a Utah-bound plane, mentally mapping out the work ahead of him.

On reaching Ogden, Utah, he learned there already had been 20 suspected cases; four victims had died, and fear nearing panic was gripping the populations in the counties north of Salt Lake City.

Infectious encephalitis is a fearsome malady.

SPREAD BY MOSQUITOES

Its virus kept alive in the bodies of many wild birds, is carried to horses and humans by infected mosquitoes. Wherever it breaks out populations cringe and withdraw from each other. The Utah epidemic was, as laboratory tests later confirmed, Western equine encephalitis.

This is not passed from the sick to the well; mosquitoes must be the virus carriers—but who knew then?

Like polio, the malady starts with high fever, chills, muscle aches and weakness, and stiffening of back and neck muscles. Stricken infants develop raging fevers and may go into convulsions. Some die, or may survive with damaged brains.

In adults the onset is more gradual but by the second or third day sleepiness sets in, a sleepiness that may progress to coma, disorientation and delirium.

Some call infectious encephalitis America's sleeping sickness. It is unrelated however, to that ailment transmitted to humans in Africa by the tsetse fly.

DOCTOR'S ASSIGNMENT

Dr. Donath knew the work ahead of him. His job was to find the source, the breeding area for the mosquitoes. His job was to calm the people and enlist their help. He was to interview the patients and their physicians, and with the help of State and local health department staff members, break the chain of the disease's transmission.

The Control Center here in Atlanta also routed entomologists to the scene. Experts in the ways of mosquitoes, their job was to trap the insects in the fields to find out which were the virus carriers and to find their breeding sources.

The CDC also dispatched engineers with special spraying equipment from its Greeley, Colo., field station. Their task was to spread mosquito-killing fogs across the fields where standing pools of irrigation water in the warm days released clouds of insects.

The engineers also directed draining procedures, and mapped out a more healthful irrigation system for future seasons.

PATIENTS CHECKED

Dr. Donath, for his part, visited the sick in the Ogden hospital. He checked the records of those already dicharged and he went to their homes with their physicians to take blood samples. He looked for unreported cases and checked the suggestive ones.

Before his work was done he was able to confirm positively 40 cases of encephalitis out of data on 120 clinically suspect cases in 4 counties. About 100 horses, particularly vulnerable to western equine encephalitis, also had died before the outbreak's end in mid-September.

Did Dr. Donath stop this epidemic? No one will ever know. Back at work here today, wrapped up in routine, he said, only:

"What we did may help that area far more in the seasons to come than it did last summer. The people now know what to look for, what to do."

Today the Utah battle scene is just a numbered pin on a large map on the wall of an office here at the communicable disease center.

TEXAS DISEASE AREA

Another pin marks Hidalgo County, Tex., where the St. Louis variety of infectious encephalitis struck in 1954. This mosquito-borne virus does not sicken horses. It is even more dreaded than eastern or western equine encephalitis and can pass from human to human after the first bite of the first infected mosquito.

The puzzler in this epidemic was to identify the carrier mosquito. Authorities had known for some years that the mosquito Culex tarsalis was a vector (disease transmitting agent) for St. Louis encephalitis. But the disease detectives couldn't blame that species.

Until then the common house mosquito, Culex pipiens quinquefasciatus, was considered innocent. Studies of the Hidalgo County brood showed that the house mosquitoes were transmitting the infections.

Though these mosquitoes are built for long distance flying, the entomologists said, they don't have the inclination for it, preferring to stay close to habitations. This habit may have broken the back of the Hidalgo outbreak. Sprayers worked in from the canebreaks to the houses, in all-out, but localized, mosquito extermination campaigns.

THREE HUNDRED CASES REPORTED

Before the outbreaks end, however, 300 cases of encephalitis were recorded. The health authorities, however, said the actual number was more likely about 1,000.

The communicable disease center here is the nerve center of the Nation for disease surveillance. It is here that the disease detectives keep track of appearances and outbreaks of influenze, polio, encephalitis, diphtheria, malaria, hepatitis, diarrheal diseases, and hospital-bred staphylococcus.

Labor's Civil Rights Program Called a Dismal Failure

EXTENSION OF REMARKS
OF
HON. THOMAS B. CURTIS
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Monday, March 2, 1959

Mr. CURTIS of Missouri. Mr. Speaker, I am inserting in the RECORD a news release calling attention to the article which appeared in the March edition of Fortune magazine. I believe, however, that my colleagues would derive much benefit from reading the entire article. In this connection I also would like to have them refer to the editorial on the same subject which I placed in the RECORD on February 23, 1959, which appeared in the St. Louis Post-Dispatch.

The news release follows:

LABOR'S CIVIL RIGHTS PROGRAM CALLED A DISMAL FAILURE

NEW YORK, N.Y., February 24.—Labor's ambitious plans for improving the lot of the Negro union member have been a dismal failure, Fortune magazine said today.

Fortune called the AFL–CIO civil rights program, first propounded 3 years ago, a fiasco in both the North and the South.

Despite a federation ruling that all discriminatory provisions must be deleted from member union constitutions, and an AFL–CIO committee to investigate abuses, Fortune reported that Negro workers are today largely excluded from some of the largest unions including the International Brotherhood of Electrical Workers, the Plumbers, and the Locomotive Firemen.

In many other unions, the magazine said, there is a mixed pattern: exclusion in some areas, free acceptance in some, and acceptance in segregated locals in others. Some such mixture characterizes the Bricklayers, Painters, Plasterers, Operating Engineers, Sheet Metal Workers, Railway Clerks, Telegraphers, Maintenance of Way Employees, Railway Carmen, Tobacco Workers, Pulp and Sulphite Workers.

Negroes do best in the big northern cities. In New York, even the Electrical Workers accept them freely. In Chicago, the Plumbers can point to a Negro business agent. However, Negro organizations have been complaining bitterly about one situation involving the Railway Clerks. All over the United States the Clerks have segregated locals. The practice is institutionalized to the point that all Negro local numbers begin with "6." In New York City, for example, Negroes belong to Local 6118, the "Friendship Lodge," while whites belong to Local 783, the "George M. Harrison Lodge." Harrison is the international president of the Clerks.

New President of St. David's Society of Wyoming Valley, Pa.

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Monday, March 2, 1959

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Wilkes-Barre Times Leader of February 24, 1959:

ST. DAVID'S NEW PRESIDENT

The elevation of John Griffiths of Wilkes-Barre to the presidency of the St. David's Society of Wyoming Valley is recognition of his service to the organization as an officer and member.

Mr. Griffiths is one of the most active members of the society. Currently, in the role of chairman, he is occupied with the preparations for the annual St. David's dinner at Irem Temple on Saturday night. He also is a former vice president and financial secretary. For 24 years he has been affiliated with the Heights St. David's Society.

Mr. Griffiths has devoted a great deal of time and energy to the St. David's Society. He is capable of vast enthusiasm and has a capacity for friendship and leadership that should redound to the benefit of the organization.

A native of the Heights, Mr. Griffiths lives in the house where he was born more than a half-century ago. His father, the late John Griffiths, immigrated to Wilkes-Barre from south Wales 71 years ago. His mother was born here of old Welsh stock, so he comes naturally by his interest in St. David's Society.

As treasurer of First Welsh Presbyterian Church for a quarter century, Mr. Griffiths has played a leading role in its affairs. He and his wife are advisors to the youth fellowship.

Mr. Griffiths also has been interested in education, serving as president of the Custer and G.A.R. Parent-Teacher Associations. He was treasurer of the Man-Cite Club for years and is a member of Fidelity Lodge, Free and Accepted Masons.

As assistant mining engineer for Luzerne County, he is widely known in courthouse circles. Before that he was with the city engineering department. Years ago he was employed by Lehigh Valley Coal Co.

It is no small distinction for a resident of the community to head the St. David's Society and carry on the traditions of 13 centuries. The responsibility is a heavy one, but with his experience he would seem to be well equipped to undertake the assignment.

A Definite Challenge

EXTENSION OF REMARKS
OF
HON. JOHN W. McCORMACK
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Monday, March 2, 1959

Mr. McCORMACK. Mr. Speaker, elsewhere in today's RECORD I have inserted an article from the Wall Street Journal of March 2, 1959, entitled, "Challenge in Science." A summary of the article is in the first paragraph as follows:

Considering Russia's accelerating pace in research and the Russians' intense motivation to overtake Americans on all fronts, the United States is in danger of losing its overall science leadership within 10 years.

This is, indeed, a sobering statement and so is a statement dated February 26, 1959, of the Secretary of Health, Education, and Welfare, the Honorable Arthur S. Flemming. His statement may be summarized as follows:

I have learned, with considerable disappointment, that many schools across the country, for one reason or another, are failing to take advantage of a virtually cost-free opportunity to strengthen the teaching of science and mathematics.

Government surplus equipment suitable for use in teaching science and mathematics is currently declared surplus at the rate of about $100 million in initial value each year.

Although the equipment is available to colleges and universities and to public, parochial and nonprofit private schools throughout the country, only about 20 percent of the scientific items actually find their way into educational institutions.

Mr. Speaker, the implication of the Secretary's statement seems to be that the schools in the United States are at fault in failing to get valuable scientific equipment virtually free. As chairman of the Special Subcommittee on Donable Property of the House Government Operations Committee and as sponsor of Public Law 61 which made surplus property available to educational activities it is my considered judgment that the failure of the educational institutions to make 100 percent use of the surplus equipment is due to lack of leadership and coordination in the executive branch of the Government. I regret that it is necessary to make this statement but since the passage of Public Law 61 in the spring of 1955 there have been numerous examples of lack of cooperation and coordination between the several executive

agencies which are responsible for the execution of the program which was unanimously passed by the Congress.

It is a serious matter, Mr. Speaker, to state on the one hand that the Russians are challenging our leadership in the overall scientific fields and at the same time admitting that useful and necessary scientific items which are surplus to the requirements of the Federal Government are utilized only to the extent of 20 percent for purposes which involve our survival. I urge that Secretary Flemming utilize his authority either directly or through higher echelons and do what is now possible under existing legislation to insure that surplus property when useful and necessary for purposes of education health and civil defense are so employed and at the earliest possible moment.

Last calendar year surplus property at initial cost of $334,109,167 was transferred to the States for purposes of education, health, and civil defense. However, the 1960 budget statement indicates that there will be a total of $8 billion in surplus property declared in fiscal 1959 and a total of $10 billion in fiscal 1960.

Why there is so much surplus property is a serious matter upon which I have often spoken and, of course, involves the necessary organization of the Department of Defense which generates more than 90 percent of all surplus property.

The full statement of Secretary Flemming follows:

STATEMENT BY ARTHUR S. FLEMMING, SECRETARY OF HEALTH, EDUCATION, AND WELFARE

I have learned, with considerable disappointment, that many schools across the country, for one reason or another, are failing to take advtange of a virtually cost-free opportunity to strengthen the teaching of science and mathematics.

Government surplus equipment suitable for use in teaching science and mathematics is currently declared surplus at the rate of about $100 million in initial value each year.

Although the equipment is available to colleges and universities and to public, parochial, and nonprofit private schools throughout the country, only about 20 percent of the scientific items actually find their way into educational institutions.

Schools that have picked up scientific surplus property have put it to good use in science and mathematics teaching; but there are many more schools that apparently are unaware of the kinds of equipment that they can obtain simply by paying warehousing and transportation costs.

This equipment ranges all the way from push buttons for second graders to jet airplanes for engineering students. It includes nautical and navigation instruments; radio and radar equipment; electric motors and generators; photographic equipment; spectrometers; laboratory items and supplies, including chemicals; lenses, and electronic items and components.

A large part of this equipment comes from the Department of Defense, where it has been used in research laboratories, in training personnel, or in actual operations throughout the country. Other items come from the Atomic Energy Commission, from the laboratories of the Department of Agriculture, from the Veterans' Administration, and from other Federal agencies. Many of the items are in the original packing cases.

The spotty demand for scientific surplus equipment is in sharp contrast to the speed with which other surplus items, such as building supplies for school maintenance and machine tools and materials for vocational education programs, are picked up.

That scientific equipment could be equally valuable to schools and colleges generally—if they know of its existence—is shown by the fact that it is constantly being bought up by dealers, after it has gone begging for a sufficient length of time, and then is resold to schools.

Once property has been determined surplus—that is, its usefulness to the Government has ceased—the Surplus Property Division of this Department assumes responsibility for getting as much of it as possible where it can do the most good. State surplus property agencies—and every State and the District of Columbia has one—let the Department know how much they think will be requested, and the property is transferred to State warehouses. Representatives of schools may visit these State warehouses and select the items they require. Some States also circulate lists of available materials and accept orders by mail.

Real and personal property which is not disposed of in this way is advertised for sale to the public. About a year ago, for example, 100 instruments which record direction and velocity of the wind were declared surplus property, but educational institutions did not ask for them. They were sold to surplus dealers who in turn sold them to schools. Electrical measuring instruments have been sold by the thousands for as little as a few cents each and later resold to schools.

Where real efforts have been made to inform the schools, the results have been extremely gratifying. The North Carolina State agency, for example, has circularized every school in the State with a list of scientific items available, and established a Saturday warehouse open house for science teachers. The State agency now accepts all the scientific equipment it can get, knowing that the schools will put it to good use. In Nebraska the State agency worked with the University of Nebraska in preparing guide sheets for science teachers, to show how available equipment can be modified or adapted. The Texas agency has on its staff a specialist whose chief concern is to see that available scientific equipment is put to maximum use in Texas schools.

I am convinced that all that is needed is more information about what is available in the surplus property warehouses and greater initiative on the part of the schools themselves.

A school can obtain much useful equipment for its science and mathematics courses simply by:

1. Getting in touch with the State surplus property agency and establishing the school's eligibility.

2. Sending the appropriate personnel to the warehouse to see what is actually available or likely to be coming in.

3. Informing each science or mathematics teacher what is available and at the same time obtaining a list of items that each teacher would like to have for his classes.

4. Providing the State agency with a list of desired items so that the State agency can be on the lookout for them as they become surplus.

In many instances it is simply a matter of backing the school bus or station wagon up to the loading platform of the warehouse, picking up previously selected items and driving off with them.

Valuable scientific equipment constantly comes on this market. Within a few weeks 19 unused dynamometers for checking engine efficiency are likely to be available in the New Orleans area, left over from the Michaud ordnance plant, which formerly built tanks. Each has an acquisition cost of more than $11,000. These dynamometers will—I hope—find their way into engineering schools which need them.

A large number of secondary schools, colleges, and universities have taken advantage of the opportunity to obtain valuable equipment at little or no cost. Just last week $4 million worth of radar units were allocated to universities and colleges. Last fall a $1,300,000 aerial navigation trainer was given to the University of Pennsylvania, which will use its components in building a nuclear reactor. Electronic computors have been given to the University of New Mexico, the Louisiana Polytechnic Institution, the University of Kansas, and George Washington University in Washington, D.C. Students in a Kentucky high school operate a "ham" radio station put together with surplus property—and students in a Virginia technical school operate their own TV station—also assembled from surplus property. The Aeronautical Engineering Department of the University of Maryland has constructed a supersonic wind tunnel from parts of a former Japanese wind tunnel and two large steel tanks formerly used by the Navy in conducting a diving school.

The surplus property utilization program as a whole has made major contributions to our schools, and our public health and civil defense agencies since its establishment in 1946.

During the past 13 years 84,522 acres of land and 6,871 buildings have been conveyed to colleges, universities, and junior colleges. These represent an acquisition and improvement cost of over $296 million.

Over 20,000 buildings have been transferred to elementary and high schools, mostly for use as shops and classrooms. The facilities given to public schools through surplus property are worth more than $500 million.

Early in 1958 vocational and trade schools—and colleges and universities—reported an urgent need for machine tools to expand training facilities and replace obsolete equipment. For this reason, increased emphasis was given this phase of the surplus property program. During 1958, 7,476 machine tools were allocated, with an acquisition cost of nearly $13½ million. This represents an increase over 1957 of 339 percent in the number of machine tools donated, and a 312-percent increase in their acquisition cost. Additional thousands of components, accessories and supplies for these machines, as well as related testing and measuring equipment, were also given to schools. As patterns of defense production continue to change, even more machines are expected to be available in the tools-for-schools program. These machine tools should be in especial demand by area vocational educational programs now being established or expanded under title VIII of the National Defense Education Act.

During the past year, about 80 percent of all surplus personal property was distributed to schools, about 10 percent to hospital and health facilities, and 10 percent for civil defense purposes.

Since the inception of the surplus property utilization program in 1946, personal property with a Government acquisition cost of $1,590,835,673 had been made available to State agencies for donation for health, education, and civil defense purposes. Real property with an acquisition cost of $742,373,674 has been transferred to health and educational institutions.

Hon. Latham Castle

EXTENSION OF REMARKS

OF

HON. ROLAND V. LIBONATI

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Monday, February 16, 1959

Mr. LIBONATI. Mr. Speaker, President Eisenhower is to be congratulated for nominating the present attorney general of the State of Illinois, Latham

Castle, to become a judge of the U.S. Court of Appeals for the Seventh Circuit—Illinois—to succeed the late Judge Philip J. Finnegan.

Latham Castle is of old Illinois pioneer stock. His grandfather, Miles Beach Castle, an early settler in De Kalb County, founded the Sandwich State Bank in 1856. Latham, after service in World War I, was graduated from Northwestern University Law School in 1924. He became city attorney of Sandwich, Ill., in 1926; and in 1928 was elected States attorney of De Kalb County, reelected in 1932 and 1936. His future in the law continued in 1942 until 1952 as county judge. In 1952 he was elected attorney general of the State of Illinois and reelected in 1956.

Latham Castle is a legal scholar as well as a brilliant lawyer. He represents the highest ideals in his profession. He has never forgotten his loyalties to friendship. His career as a public servant has been marked with a real sense of high integrity. He has a fine mind, and life's experience has mellowed his judgment and understanding. His judicial training, together with a high quality of the understanding of law enforcement, both as States attorney and attorney general, have prepared him for the responsibility of this high office.

I congratulate him, his lovely mate, Georgiana, and his son, John, for this merited honor. The court of appeals will welcome such an illustrious son of the law.

Eric Allen, Jr., Discusses Individual Liberties and Wins a George Washington Honor Medal

EXTENSION OF REMARKS
OF
HON. CHARLES O. PORTER
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Monday, March 2, 1959

Mr. PORTER. Mr. Speaker, in February, Eric W. Allen, Jr., managing editor of the Medford Mail Tribune, won a Freedoms Foundation award for his December 4, 1957, editorial "Liberty Versus License."

In his fine editorial Eric Allen wrote:

In determining the principles which govern human relationships, one must go back to those which have been proven, time and time again, and are the only ones which will work. They stem, actually, from the Golden Rule.

And in a democracy they can be embodied in the idea of the greatest good for the greatest number, and the belief that there should be the greatest possible liberty for all—but license for none.

His words pertain to the Bill of Rights and individual liberties under our form of constitutional Government. His editorial was 1 of 33 selected from throughout the United States.

I am proud to have Eric as a friend and, on occasion, as a helpful and thoughtful critic.

Under leave to extend my remarks in the RECORD, I include a news story from the February 23, 1959, edition of the Medford (Oreg.) Mail-Tribune announcing the Oregon winners of Freedoms Foundation awards and Eric Allen's prize-winning editorial, "Liberty Versus License":

[From the Medford (Oreg.) Mail-Tribune, Feb. 23, 1959]

ERIC ALLEN, JR., RECEIVES FREEDOM GROUP'S AWARD

VALLEY FORGE, PA.—Four Oregon individuals and 4 Salem schools were announced today as recipients of 1958 Freedom awards by the Freedoms Foundation here.

The awards are made annually to individuals, organizations, and schools throughout the country for their contributions toward a better understanding of the American way of life during 1958.

Individual awards winners for Oregon included:

Eric W. Allen, Jr., managing editor of the Medford Mail-Tribune, a George Washington honor medal for an editorial, "Liberty Versus License."

Henry Slater, Burns, an honor medal for an essay, "Let's Stand Up and Be Counted."

Judy McKenzie, McMinnville, honor medal award for youth public address, "What the Flag Means To Me."

Dr. Mark A. Talney, Portland, a second place award of $50 and George Washington honor medal, for a sermon, "George Washington: Example of True Greatness."

The Salem schools honored were Englewood, Leslie Junior High, Morningside, and Richmond.

LIBERTY VERSUS LICENSE

Americans are rightly jealous of their freedom—their liberty to do as they will without hinderance.

This historic trait, which has grown for a longer time that the Nation has existed, is an admirable one. But, like every other good trait, it can be overextended.

In the democratic philosophy, liberty should extend just so far as the liberty of the next man. In other words, one can do anything he wants unless it harms another.

That is the test of when liberty becomes license.

One sees examples of this on all sides, and at all levels, in big things and small.

It was true when the early timber barons cut off the forests of Michigan and the Dakotas, leaving infertile and flood-producing hills for future generations.

It is true of the reckless driver. No one cares particularly if he gets hurt—it is the lives and property of the others he endangers that require traffic law enforcement.

It is true of the obnoxious couple in the theater, who loudly munch popcorn or converse freely without thought of the discomfort or inconvenience to others.

One of the classic examples was the judicial ruling that freedom of speech does not give anyone a right to yell "Fire!" in a crowded theater.

There are other examples, close to home both in time and distance.

Does one man's enjoyment of a fishing stream entitle him to oppose, on any basis, measures designed to control floods for the protection of the lives and property of others?

Does one family's desire to own a home without restrictions grant them the right to construct a septic tank the overflow from which threatens the health of their neighbor's children?

Does a logger's right to harvest timber carry with it the right to do so in a way which creates stream pollution and the danger of erosion?

Does a man's right to do business grant him the authority to destroy property values of another, perhaps by building a wrecking yard or slaughterhouse next door to an attractive home?

These are questions which any growing community must face, and think about, and answer.

For they are questions which continually arise as more and more people settle in an area. And if they are not settled, in principle, they will result in bitterness and acrimony. And then it will be too late. In some instances, it is already too late.

In determining the principles which govern human relationships, one must go back to those which have been proven, time and time again, and are the only ones which will work. They stem, actually, from the Golden Rule.

And in a democracy they can be embodied in the idea of the greatest good for the greatest number, and the belief that there should be the greatest possible liberty for all—but license for none.—E.A.

Why Municipalities Oppose Bill To Amend Natural Gas Act

EXTENSION OF REMARKS
OF
HON. GEORGE M. GRANT
OF ALABAMA
IN THE HOUSE OF REPRESENTATIVES
Monday, March 2, 1959

Mr. GRANT. Mr. Speaker, several days ago a group of the Alabama League of Municipalities, under the able leadership of executive director Ed E. Reid, met in Washington with members of the Alabama congressional delegation.

Along with other mayors, Hon. H. H. Dees, mayor of Atmore and past president of the organization, made a report which I am privileged to insert in the CONGRESSIONAL RECORD:

WHY MUNICIPALITIES OPPOSE BILL TO AMEND NATURAL GAS ACT

(By H. H. Dees, mayor of Atmore)

Gentlemen, one of the bills under consideration of the 86th Congress would, if enacted, work serious detriment to the municipalities and the people of Alabama, as well as to the entire Nation.

I refer to the bill known as H.R. 366—the Harris bill—to amend the Natural Gas Act so as to remove some of the regulation of the Federal Power Commission over the producers of natural gas.

This is a reoccurring issue in Congress, and it has an unsavory history. The bill of the 84th Congress, which would have exempted natural gas producers completely from Federal regulation, was passed by Congress over the objections of many Congressmen, including our own KENNETH ROBERTS of the Fourth Alabama District, who is a member of the Interstate and Foreign Commerce Committee, which handles natural gas legislation. Congressman ROBERTS has fought this legislation every time it was proposed, and he is actively opposing the present measure.

When the 84th Congress sent that Natural Gas bill to the President, he returned it without approval. The President explained that he was distressed over efforts of certain private persons to press passage of this bill to further their own interests by highly questionable activities.

COMPROMISE BILL DROPPED LAST YEAR

Of course, those people who fostered that bill would not let it die, and another compromise bill came up in the 85th Congress. This one was reported out of committee,

but it was also killed in questionable circumstances. Some Texas Republicans held a big dinner to try to raise money to influence Congressmen to vote for their bill; and when the political blunder was uncovered, the bill was never even mentioned again during that session.

Now there is a new bill, substantially the same as that of the 85th Congress, which is called a compromise bill because it gives the FPC certain regulatory authority. However, the power to regulate is so circumscribed that it does not in any measure serve to protect the consuming areas of Alabama and the rest of the Nation from unjustified increases in the price of natural gas. The exploitation of the consumer is assured in the provisions of this bill.

This bill specifically prohibits the Federal Power Commission from considering costs or from using the public utility rate base cost-of-service concept or formula in determining what is nebulously called the "reasonable market price." Determination of this price in accurate degree would appear near impossible. For the Commission is called upon to set up a reasonable market price through consideration of a number of factors, including the last sale, highest price, lowest price, weighted highest price, average field price or other price, as well as other things. One of the things the Commission is directed to consider in arriving at the vague reasonable market price is whether the contract price was arrived at competitively and in arm's length bargaining. This is to be done, presumably, despite the frequent close community of interest between pipeline companies and producers through mutual ownership, in whole or in part.

COST FINDING SHOULD BE PART OF REGULATORY PROCESS

Admitting that costs not always are easy to obtain, it is nonetheless true that their use is imperative in making a determination of a fair price. A staff member of the Philadelphia Gas Works has stated, and I quote:

"We believe that cost finding is and will continue to be an essential part of the regulatory process; that new approaches are necessary; and that it will be possible to develop procedures by which the Federal Power Commission can determine fair cost levels, against which it can evaluate rates for natural gas in the field as they may be proposed. We believe that the end result can mean an economically healthy and expanding producing industry, while at the same time affording protection to the consumer against unnecessary price increases."

Departure from the cost principle coupled with the involved and weak regulatory power of the FPC as prescribed in this bill foreshadows a serious hike in the price of natural gas to 22 million householders and 2 million industrial establishments in the United States. Proponents of the bill themselves concede that prices of natural gas will rise if the reasonable market price yardstick is applied. It has been estimated that a price increase of 5 cents per thousand cubic feet of natural gas would increase the field price to consumers in Alabama alone by $7 million a year. A 10-cent-per-thousand-cubic-feet increase would boost the annual field price in my home State by $14.7 million. Over the Nation, a 10-cent-per-thousand-cubic-foot raise would mean $633 million more in consumer costs. It is possible that natural-gas consumers could expect an ultimate 15-cent increase, at a new cost to the Nation's consumers of more than $950 million a year. Not only is there this direct cost to natural-gas users, but there is an accompanying hike in the cost of electricity whenever natural gas field prices are allowed to jump upward. According to a study made by Energy Research Associates, each 5-cent-per-thousand-cubic-foot increase in the field price of gas would raise the cost of producing electricity in the United States by $58,176,307 a year. A full 15-cent field-price increase would mean a $174,528,923 boost in the cost to gas-consuming electricity producers each year. This increase would mean Alabama consumers of natural gas to generate electricity would pay $3,278,030 a year more for their electricity than they now pay, and this cost increase would be passed along to the thousands of Alabamians who use electricity from these sources.

PRICE INCREASES WOULD HIT HOMEOWNERS

It is pertinent to note that these price increases will, for the major part, be borne by the homeowner. It is the private citizen who will pay the bulk of costs—including the profit—while the industries pay little more than the actual cost of the gas plus transportation. These consumers are captive users of natural gas inasmuch as they are tied to the ends of pipelines and have invested more than $12 billion in gas-burning equipment. This fact negates another argument of the proponents of this bill that natural gas is a commodity like oil and coal and is the only commodity subject to utility-type regulation. This is a false look at the situation. Natural gas is not transported like coal or oil by motor, rail or water. Natural gas must be transported through an expensive pipeline extending from source to consumer. Natural gas thus acquires the characteristics of a utility—of a monopoly, if you will—and thus makes it a seller's market. Once a pipeline is built, it cannot simply be picked up and cast about like a garden hose in search of a cheaper, more economical gas. Neither is it economically feasible for the consumer faced with rising natural gas prices to discontinue his use of gas and switch over to coal, oil or some other fuel.

DEVELOPMENT OF GAS SOURCES NOT IMPEDED

When the proponents of this legislation concede to the fact that this disturbing rise in costs of natural gas to consumers is inherent in this bill, they attempt to justify this by claiming that there must be a change in present Federal regulations to stimulate the drilling of new wells and further exploration by gas and oil companies. There has been no convincing evidence that development of gas resources is being impeded by the kind of regulation permissible under existing law. Nor is there evidence that the industry has not prospered, nor will continue to prosper, under the current regulations.

Since the Phillips Petroleum Co. case of June 1954 when the Supreme Court held that the Natural Gas Act applies also to the sales of natural gas by independent producers who are engaged in interstate commerce for resale, the natural gas companies have fared quite well. According to Federal Power Commission reports, the net income of natural gas pipeline companies which file statements with FPC has risen steadily since the Phillips decision. The 1954 net income was up to $166,163,000, or 7.4 percent more than in 1953, when it was slightly over $154.6 million. In 1955, it was $219.3 million and in 1956 it was $241.4 million. The pipeline firms under FPC jurisdiction obtained Commission authorization to add more than 2.25 billion cubic feet of daily delivery capacity during the year ending June 30, 1956. That was some half-billion cubic feet more than in the preceding 12 months. Do these figures indicate the need for a mass giveaway that would benefit a small special interest group of less than 200 big gas producers? Even if there did exist the necessity to modify present controls to encourage natural gas development, there would need to be retained some manner of formula for setting prices. Not to do so, to use the words of an editorial in the Washington Post of last June "would make a mockery of the regulation under local laws of gas distributing companies, placing local regulation completely at the mercy of a vague concept of fair wholesale values administered without legal guidance."

THE FPC MUST HAVE AUTHORITY TO REGULATE

The Federal Power Commission must have the authority to regulate gas at the wellhead if the consumer is to be protected from exploitation by excessive costs. The only way to protect the unorganized, unrepresented consumer from being overcharged by a few powerful gas and oil concerns is to regulate the field price of natural gas. That regulation must be one defined in specific terms and not so circumscribed as to be impossible to impose. Defeat of the Harris bill would mean continued FPC authority which would result in a satisfactory balance between production and profits, and consumption at a reasonable price.

Mayor Luther Kniffer of Wilkes-Barre Plans To Retire

EXTENSION OF REMARKS

OF

HON. DANIEL J. FLOOD

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Monday, March 2, 1959

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Wilkes-Barre Times Leader of February 19, 1959.

END OF POLITICAL ERA—RETIREMENT OF MAYOR KNIFFEN

While the decision of Mayor Luther Kniffen to retire from public life was not a surprise because of his health and advancing years, nevertheless it will have widespread repercussions at City Hall and in county as well as in city politics.

Although he will not be a candidate for a fourth term, it is inevitable that he will continue in the public eye because of his prominence and influence as well as his role as a leading funeral director in the community. Men like Mayor Kniffen just don't drop from sight when they sever official ties.

The city's chief executive has been honored as few men have in the history of the community. As mayor, councilman and school director, he held three key posts in his native city, evidence of the high esteem in which he was held. Luzerne County added to this impressive record with the offices of sheriff and coroner.

But it was as mayor of Wilkes-Barre that he unquestionably derived his greatest satisfaction. The office, in the first place, had for him sentimental attachment because it was held by his colorful father, the late Lewis Kniffen. But it was not as his father's son that he was elected three times, but on the basis of his own record as an official, citizen, and neighbor.

As he starts down the home stretch, Mayor Kniffen can look back on 11 hectic years. The office has not been a sinecure during the past decade. Wilkes-Barre, like the world at large, has been through troubled times and the end is not in sight for either.

As mayor, Mr. Kniffen has had far more to do than to greet distinguished visitors, sign proclamations and attend dinners. The office itself made him chief executive and principal law enforcement officer. By statute, he has been head of the Department of Public Affairs which includes the Bureau of Police, the Bureau of Law and the Bureau of Weights and Measures. He has been chair-

man of the Board of Revision of Taxes and Appeals, the Flood Control Committee, the Sinking Fund Committee and the Traffic Committee. As head of City Council, he perhaps wielded his greatest influence, since his authority extended into every sphere of municipal government, directly or indirectly.

Few people realize what is involved in such an office. Mayor Kniffen, like President Eisenhower, has been living in a figurative fish bowl and his chores are never done, for he is subject to duty around the clock. Sometimes, it is difficult, under these circumstances, to understand the fascination of the White House and City Hall unless it is the glamor, the prestige and the challenge of public service.

Mayor Kniffen's success as a civic and fraternal leader has been no less outstanding than his career as a public official. It has been no accident that he won recognition in so many fields.

With 10 months of his fiscal term ahead of him and countless years in private life, Wilkes-Barre, of necessity, must delay its farewells, but this newspaper will take the liberty, on behalf of a grateful public, to extend best wishes.

Federal Meat Inspection

EXTENSION OF REMARKS

OF

HON. MELVIN PRICE

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Monday, March 2, 1959

Mr. PRICE. Mr. Speaker, under leave to extend my remarks in the RECORD, I submit herewith a joint statement supporting meat inspection appropriations contained in the budget request. I urgently request my colleagues to support the budget request of $21,475,000 for the Meat Inspection Division of the Department of Agriculture.

The statement follows:

A JOINT STATEMENT SUPPORTING MEAT INSPECTION APPROPRIATIONS

Mrs. Homemaker demands assurance that the meat she buys for her family's dinner table is clean and wholesome. Congress, more than a half century ago, decided that she has the right to this guarantee. It, therefore, established a meat inspection agency.

We, the officers of consumer, public health, farm, livestock, producer, labor and management organizations, agree that Mrs. Homemaker and her family must be fully and effectively protected. We are, therefore, anxious that the Meat Inspection Division of the Department of Agriculture obtain sufficient funds to employ an adequate staff of inspectors.

For a period, which fortunately ended last year, the Meat Inspection Division was inadequately supported. It could not increase its staff of inspectors to meet the steadily rising demands, which resulted from the meat industry's decentralization and growth. The increase in funds in the appropriation and supplemental appropriation for fiscal year 1959 have, we are glad to say, again put the division on the road to full effectiveness.

The $21,475,000 budget request for the Meat Inspection Division for fiscal year 1960, although hardly generous, does promise to continue to permit the hiring of new and needed inspectors. We, frankly, would have liked to have seen a somewhat higher request, but we hope this amount will prove adequate.

We, therefore, urge Congress to approve the budget request of $21,475,000 for the Meat Inspection Division of the Department of Agriculture. We believe it is the minimum amount necessary to permit the division to keep an adequate staff of inspectors, who must provide the consumer protection so necessary to our Nation's health.

Thomas J. Lloyd and Patrick E. Gorman, President and Secretary-Treasurer, Amalgamated Meat Cutters and Butcher Workmen (AFL–CIO); Radford Hall, Executive Secretary, American National Cattlemen's Association; Homer R. Davison, President, American Meat Institute; A. Z. Baker, President, American Stock Yards Association; James G. Patton, President, The National Farmers Union; Herschel D. Newsom, Master, The National Grange; John A. Killick, Executive Secretary, National Independent Meat Packers Association; Dr. R. A. Hendershott, Secrtary, United States Livestock Sanitary Association; E. F. Forbes, President and General Manager, Western States Meat Packers Association.

Lincoln: Lest We Forget

EXTENSION OF REMARKS

OF

HON. RALPH YARBOROUGH

OF TEXAS

IN THE SENATE OF THE UNITED STATES

Monday, March 2, 1959

Mr. YARBOROUGH. Mr. President, just over 150 years ago, in a small log cabin with a packed dirt floor, young Dennis Hanks held a new born baby. As he returned the babe to its mother, he remarked, "He'll never come to much."

Just a little over half a century later, Secretary of War Edwin M. Stanton stood by the death bed of a President and, in an emotion-filled voice, pronounced a benediction on that same child, now the American martyr: "Now he belongs to the ages," Stanton said.

In the magnificent lifetime between those two statements, the hard-working, self-educated rail splitter from Kentucky earned for himself the nickname of "Honest Abe" and the reputation of a wise and just man. Monuments made of stone have fallen, but the monument contained in the name and reputation of Abraham Lincoln will endure for thousands of years, just as the reputations of the greatest of the ancient Greeks live today.

Lincoln freed the slaves, saved the Union, and, but for his assassination, would have saved the South and the Nation the horrors of reconstruction. He loved all mankind. His triumph over personal obstacles is one of the greatest chapters in human history.

I do not see how anyone can visit the beautiful quiet of the Lincoln Memorial here, with its classic statue, or come to these congressional halls without hearing softly re-echoing the proud words: "government of the people, by the people, and for the people."

On a Sunday in February I went to the old Ford's Theater here where President Lincoln was assassinated. There, as a member of the Lincoln Sesquicentennial Commission, and its observance of the 150th anniversary of Abraham Lincoln's birth, I heard an address by Professor Earl W. Wiley of Ohio State University. He is chairman of the Ohio Lincoln Sesquicentennial Commission.

Mr. President, I felt the address, entitled, "Abraham Lincoln: Lest We Forget," worthy of the Nation's attention. I request unanimous consent to have it printed in the Appendix of the RECORD at this point.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

ABRAHAM LINCOLN: LEST WE FORGET

I am genuinely happy of the opportunity to be here today. I know of no other place where I would rather be on this sequicentennial Sabbath than in this memorial that knew Lincoln's presence. I know of no other subject so pertinent to the national hour as that of Abraham Lincoln. I know of no other duty more urgent on our citizens as that of paying homage to the memory of this man whose ideals are being flouted in many places. I know of no other of our honored dead more worthy of our prayers and acclaim, and whose memory holds more for us, the living, than him we come here to honor.

I leave to the historians the task of revealing anything new about Lincoln. In the few minutes I am privileged to address you, I turn to Lincoln's own words for my theme. Words as you know are important. They make you laugh. They make you cry. They make you love. They make you hate. They make you happy. They make you sad. But it is so easy to get them out of place. This was shown by an incident that occurred at an important dinner party. The host, giving last minute instructions, reminded the cook not to serve the salad dressed, but to serve it undressed, since he wanted to take care of that detail himself. At the salad course he was horrified to see the cook, clad only in her slip, come through the door carrying the salad bowl. "What's the meaning of this?" he asked. "You said undressed," she retorted, "but this is as far as I go!" Lincoln, too, utilized humor for his purpose. But today I would keep Lincoln, the man of laughter, in context with his overall development as one who grew eloquent on the subject of human rights. The day came when he spoke immortal words at Gettysburg. It is the story of that development I would share with you today.

Six months following Lincoln's arrival in Illinois from Indiana, he made his first political address. He was 21 years of age. Accompanied by John Hanks, his cousin, he attended an open air rally held near Decatur, and not far from the spot where the oxcart conveying the worldly possessions of the Hankses, the Johnstons, and the Lincolns, jolted to its final stop in the long trek from Pigeon Creek. When John F. Posey, a local character, completed his remarks, Hanks openly declared the address a poor effort and boasted that young Lincoln could make a better speech.

Without the slightest show of stage fright, Abe mounted the box Hanks turned down for him, and declared a program of internal improvements essential to Illinois' economic progress. He wore a light blue jeans coat, short in the sleeves, trousers that failed to reach the tops of his lowcut shoes, and a broadbrimmed hat. The journey to Gettysburg had begun.

In the summer of 1831 Lincoln took up residence in New Salem, a frontier community located on a high bluff overlooking the Sangamon River. He was fortified with a disarming gift of gab, a fondness for the fanfare of the crowd, a liking for people, boundless ambition, a fund of droll stories, and an

empty purse. He chatted nimbly with people as he had done in the past—at the mill, at an election booth, in Rutledge's tavern, or on the village green. His stock of tall tales, his feats of mimicry, his pranks of ventriloquism joined with gay satire, all recited with a merry twinkle of the eye and tuned to the soft cadence of a Kentucky drawl, threw the Clary Grove boys into fits of laughter, and amused his mates banked around the mosquito-ridden bivouacs of the Black Hawk uprising. Lincoln became the genial Oliver Goldsmith of New Salem Hill.

But he was something more than the village wag. He proved himself able to hold his own in the forensic contests sponsored by the New Salem Literary Society. He analyzed and debated such questions as, Are the pioneers of the West entitled to a pension? What is dearer to man, life or liberty? Which is the greater evil, slavery or intemperance, in the United States? Supposing a law be passed freeing the Negroes, which would be the more politic in the United States, to educate them and make them equal citizens with us or colonize them in another land and hold them as other allies?

Young Lincoln exchanged the coin of words for the good will of his New Salem associates. The roistering lads of Clary Grove put their mark of approval on him, and more substantial residents, like James Rutledge, set him apart as a youth of promise. Denton Offutt predicted a bright future for his young clerk. Mentor Graham tutored him in the rudiments of grammar. Jack Kelso read poetry to him. John Calhoun encouraged him to study the elements of surveying. Bowling Green taught him the procedures of the squire's court. So it went, and when Lincoln recruited a company of volunteers for the Black Hawk war, the men elected him captain.

Geniality was paying off for Lincoln. It was an easy step from here to politics, for a democratic society entertains the credo that a popular man makes an able public officer. Presently he became a candidate for the general assembly, encouraged by friends to take the step. This was in 1832. He lost the election, standing 7th among the 13 candidates, 4 of whom were chosen. Yet he polled more than half of the votes cast in the entire county, and of the 208 votes cast in his home precinct, he received 205.

Politics were personal on the frontier. The color of a candidate's hair, the size of his nose, the fit of his coat, would sometimes assume an importance out of all proportion to the issues of the campaign. To survive in pioneer politics, accordingly, Lincoln must cultivate an ad hominem style of argument. He proved an apt student, as shown by the following attack he made on no other than President Van Buren. A member of the opposition in the Illinois House declared that results of the late elections in the States indicated that every State in the Union would vote for Mr. Van Buren in the next presidential election:

"Address that argument to cowards and knaves; with the free and the brave it will effect nothing. It may be true, if it must, let it. * * * I know that the great volcano at Washington, aroused and directed by the evil spirit that reigns there, is belching forth the lava of political corruption, in a current broad and deep, which is sweeping with frightful velocity over the whole length and breadth of the land, bidding fair to leave unscathed no green spot or living things, while on its bosom are riding like demons on the waves of Hell, the imps of that evil spirit, and fiendishly taunting all those who dare resist its destroying course, with the helplessness of their effort; and knowing this, I cannot deny that all may be swept away. Broken by it, I, too, may be; bow to it I never will."

That represented Lincoln's invective in December 1839. It marked the voice of youth, defiant, vehement, rash, insolent, positive, high-minded. A decade later, he turned his partisan eloquence on General Cass. He was now Congressman Lincoln, speaking in the Hall of Representatives:

"By the way, Mr. Speaker, did you know I am a military hero. Yes, sir; in the days of the Black Hawk war I fought, bled, and came away. Speaking of General Cass' career reminds me of my own. I was not at Stillman's defeat, but I was about as near to it as Cass was to Hull's surrender; and, like him, I saw the place afterward. It is quite certain I did not break my sword, for I had none to break; but I beat a musket pretty badly on one occasion. If Cass broke his sword, the idea is he broke it in desperation; I bent the musket by accident. If General Cass went in advance of me in picking blueberries, I guess I surpassed him in charges upon the wild onions. If he saw any live, fighting Indians, it was more than I did; but I had a good many bloody struggles with the mosquitoes, and although I never fainted from loss of blood, I can truly say I was often very hungry. Mr. Speaker, if I should ever conclude to doff whatever our Democratic friends may suppose there is of black-cockade federalism about me, and therefore they shall take me up as their candidate for the presidency, I protest they shall not make fun of me, as they have of General Cass, by attempting to write me into a military hero."

In 1850, President Zachary Taylor died, and Lincoln eulogized him in memorial services in Chicago. He again showed a fondness for the sophomoric word and swelling phrase in portions of his address:

"And now the din of battle nears the fort and sweeps obliquely by; a gleam of hope flies through the half imprisoned few; they fly to the wall; every eye is strained—it is—it is—the stars and stripes are still aloft. Anon the anxious brethren meet; and while hand strikes hand, the heavens are rent with a loud, long, glorious, gushing cry of victory, victory, victory."

The serenity of the Gettysburg Address still lay far beyond Lincoln's power of expression, and he now was in his forty-second year. But grave issues were in the making that called for restraint, for the calm and deliberative treatment that comes only with maturity. In 1854 the Senate of the United States passed the Kansas-Nebraska bill, and the ageless subject of slavery again commanded the headlines. It was the eve of a political hurly-burly that carried sickening implications. But even revolutions must be defined. Some one among the controversialists must state terms and specify objectives. When that man speaks the crowd pauses in its confusion and looks to him for guidance, inclined to follow one who can phrase what lies beyond their own poor gift of expression.

The man to whom the anti-Nebraskans presently turned in their uncertainty was Abraham Lincoln. He established his claim to authority on the afternoon of October 4, 1854, in the Hall of Representatives, in Springfield, Ill. An audience representing all shades of opinion on the new legislation heard him speak. Among them was Senator Stephen A. Douglas, author of the repeal measure.

That day Lincoln shed his Whig coat. He was something more than the rough-and-ready partisan who had carried the party torch for 20 years. This day he was the nationalist. He planted himself squarely on the Declaration of Independence. He was gracious and tolerant toward the South. He made no thrusts toward Douglas. He stood on high moral ground, on the thesis that slavery was wrong in principle, and being wrong in principle, its extension into free territory was immoral. He summed up his position in a passage that foreshadowed his eloquence at Gettysburg:

"This declared indifference, but, as I must think, covert real zeal, for the spread of slavery, I cannot but hate. I hate it because of the monstrous injustice of slavery itself. I hate it because it deprives our republican example of its influence in the world; enables the enemies of free institutions with plausibility to taunt us as hypocrites; causes the real friends of freedom to doubt our sincerity and especially because it forces so many good men among ouselves into an open war with the very fundamental principles of civil liberty, criticizing the Declaration of Independence, and insisting that there is no right principle of action but self-interest."

During the following months the political situation intensified. Then at candlelight, June 16, 1858, a tired group of delegates and alternates and spectators assembled in the same Hall of Representatives in Springfield where Lincoln spoke the words just quoted. That day the Illinois Republicans had met in convention, deliberated on the problems confronting such a body, drafted the customary resolutions of purpose, and designated Abraham Lincoln as their first and only choice to oppose Senator Douglas for his seat in the Senate.

A burst of applause announced the arrival of Abraham Lincoln, and all eyes turned to the rear door of the hall. The tall solemn-faced man elbowed his way down an aisle, as a thousand throats thundered out a noisy greeting. Men in shirtsleeves jumped to their feet and waved their arms. Lincoln calmly mounted the platform and sat down. The formalities completed, he walked forward on the stand, holding a manuscript in his hand. He paused, surveyed his audience, and in a deliberate and distinct voice read:

"If we could first know where we are, and whither we are tending, we could then better judge what to do, and how to do it.

"We are now far into the fifth year, since a policy was initiated, with the avowed object, and confident promise, of putting an end to slavery agitation.

"Under the operation of that policy, that agitation has not only, not ceased, but has constantly augmented.

"In my opinion, it will not cease, until a crisis shall have been reached, and passed.

"'A house divided against itself cannot stand.'

"I believe this Government cannot endure; permanently half slave and half free.

"I do not expect the Union to be dissolved—I do not expect the house to fall—but I do expect it will cease to be divided.

"It will become all one thing, or all the other.

"Either the opponents of slavery, will arrest the further spread of it, and place it where the public mind shall rest in the belief that it is in course of ultimate extinction; or its advocates will push it forward, till it shall become alike in all the States, old as well as new, North as well as South.

"Have we no tendency to the latter condition?"

Lincoln summed up the answer to his query in an allegory. He was too seasoned a speaker to discuss at length the historical implications of the repeal of the Missouri compromise, as he had done in 1854. But he mentioned the repeal policy. He mentioned the Dred Scott decision, and he referred to the apparent studied indifference that men in high places had shown toward the spread of slavery into free territory. He likened Democratic leadership since 1852 to the building of a house:

"We cannot absolutely know that all these exact adaptations are the result of preconcert. But when we see a lot of framed timbers, different proportions of which we know have been gotten out at different times and places and by different workmen—Stephen, Franklin, Roger, and James, for instance—and when we see these timbers joined together, and see they exactly make

the frame of a house or a mill, all the tenons and mortices exactly fitting, and all the lengths and proportions of the different pieces exactly adapted to their respective places * * * we find it impossible to not believe that Stephen and Franklin and Roger and James all understood one another from the beginning, and all worked upon a common plan or draft drawn up before the first lick was struck."

The men of the prairies brought up on the parables of the Bible and the fables of Aesop could understand that language. The address constituted the starting point of Lincoln's national recognition. The New York Tribune, June 24, 1858, reproduced the speech in full, and editorially paid high tribute to Lincoln. Several Illinois newspapers printed the text of the speech. Country journals quoted parts of it. Theodore Parker, in Boston, considered the address excellent. The daring aspersions in the speech led to the joint meetings between Lincoln and Douglas later in the year, when Lincoln seized on the opportunity to express himself on the great issues disturbing his generation. One result of these contests took Lincoln into Ohio, Wisconsin, Kansas, and the East, there to continue his brilliant analysis of political principles that would have a bearing on the Presidential election of 1860.

Lincoln made his greatest political argument at Cooper Institute, February 27, 1880, in New York City. He addressed a brimming audience of 12 to 15 hundred people. William Cullen Bryant introduced him to the audience. Henry Ward Beecher, George William Curtis, and Horace Greeley, were among the celebrities in attendance. But the majority of those present were working men. This was a rare opportunity for a man politically ambitious.

Lincoln found his text in an argument Senator Douglas had contributed to the Harper's Magazine, published in September 1859. Lincoln's old rival there sought to show, using historical evidence, that the founders of the Republic intended that each political unit of the Nation had the authority to decide for itself its disposition of the slavery institution. It all led up to the conclusion that popular sovereignty had been the guiding principle of the men who founded the Republic.

Through the years from 1854 Lincoln, also, had approached the much-bandied question on historical grounds. But not in Cooper Institute. He had grown more objective in his thinking. So he approached the problem statistically. The founders of the Government were, he defined, the 39 men eligible to vote on the adoption of the Constitution in Convention. By actual count, he represented, showing studied investigation of the evidence, 21 of these. "A clear majority of the whole—certainly understood no proper division of local from Federal authority, nor any part of the Constitution (that), forbade the Federal Government to control slavery in the Federal Territories."

Lincoln, the tall, guant guest speaker in the ill-fitting clothes, took the floor at Cooper Institute as a backwoods orator from the unwashed West, and left it as a potential nominee of the Republican Party for President. He placed himself closer to Seward. He placated the fears of Greeley, and won the respect of men like Beecher. Publication of his address added to his prestige. There were those who read into his remarks something of the insight of Crittenden and Calhoun, something of the spirit of compromise of Clay, something of the eloquence of Webster, as when Lincoln remarked in conclusion, "Let us have faith that right makes might, and in that faith, let us, to the end, dare to do our duty as we understand it."

A few minutes before 8 o'clock on the gloomy morning of February 11, 1861, Lincoln stood inside the dingy waiting room of the Great Western Railroad in Springfield, Ill., chatting with friends. He was on his way to Washington to assume the duties of President. Foot beats of late arrivals echoed on the wet pavements outside; a thin sheet of rain and sleet lashed the station windows and the engine bell clanged noisily. A final clasp of the hand, a hurried word, and the President-elect mounted the steps of the rear coach and disappeared within.

Presently, in response to calls from the crowd gathered at the station, Lincoln again stood on the car platform. He removed his tall hat from his head, leaned against the brake wheel, and spoke. He relived for a fleeting moment the days when, as a penniless and untaught youth, he came to Springfield to make his home. He referred to his marriage there, to the coming of his children, and to the trials he faced. He mentioned a little mound in the local cemetery where one of his boys lay buried. Then he faced the future. Was he, the humble railsplitter, big enough for the great task that lay before him? The grinding of wheels, the banging of the bell, the hiss of steam, the bumping of car against car, announced the departure. Yet, in unforgettable words he had described the bitter sweet of sorrow that touches the heart of the traveler who turns his back on the old hometown. He was getting nearer to Gettysburg.

Inaugural morning in 1861 clear and cool in the National Capital. A sharp wind ruffled the waters of the Potomac and lashed the flags flung out bravely in Pennsylvania Avenue. The city swarmed with life, youngbloods half eager that the threatened gage of battle be cast and their elders, mindful of fever-stricken camps in Mexico, deprecating the thought of war. Squads of soldiers appeared on the streets and as quickly disappeared. The aged figure of Gen. Winfield Scott on horse left no doubt of that hero's loyalty to the colors he held so high at Lundy's Lane. The click of rifle hammers, the sharp blasts of artillery, the tart smell of smoke and powder, were reminders of what men thought that day.

The bearded Lincoln stood on a rickety platform and sought to maintain the public dignity. He had only words with which to pacify determined men who already had moved into action. He pleaded and argued his case. The note of firmness recalled Jackson. The tone of compromise suggested Clay. The hint of self-government reflected Douglas, and the high sense of tenderness marked Seward. But it was all of no use. The President had an oath in heaven to uphold the Constitution. The Union would be maintained. Yet, in closing, he held out the friendly hand:

"I am loath to close. We are not enemies, but friends. We must not be enemies. Though passions may have strained, it must not break our bonds of affection. The mystic chords of memory, stretching from every battlefield, and patriot grave, to every living heart and hearthstone, all over this broad land, will yet swell the chorus of the Union, when again touched, assuredly they will be, by the better angels of our nature."

War came, and months later came Gettysburg. The gaunt man slowly arose from a rocking chair and shuffled forward on the wooden stand. It was the same man who 30 years before mounted a box turned down for him by John Hanks and made his first public address. "Down in front" a dozen voices chorused. The weary figure in black paused, lowered his head slightly, and waited for the rumble of the crowd to cease. Adjusting his steel-rimmed spectacles, pressing out his sheets of manuscripts, he lifted his shrill tenor tones over new-made graves.

Lincoln spoke calmly, deliberately, as if he addressed his Cabinet around a table in the White House. Following Edward Everett's polished elocutionary performance his delivery seemed in contrast. There were no studied gestures; yet the speaker was the same man who once went up and down the aisle of the national hall of Representatives with coattails flying. Occasionally he would emphasize a word or phrase as when he urged the people to rededicate themselves to the restoration of civil rights in the Union for which men had just died. He suddenly dropped his arms and was gone. With startling brevity a classic had been added to the rolls of history. In lyrical rhythms he had captured the universal significance of a particular event. That is the ultimate of effective speech.

The road to Gettysburg was long. Forty years earlier the speaker was a lad at Pigeon Creek, Ind., using a gift of gab to satisfy his craving for recognition among his fellows. He next became the trusted partisan, ready to defend his party against all attacks. He then became the nationalist, and defended the principles of the founders of the Republic. Now, he was the humanist, concerned with men the world over. Lincoln had grown tall. He was 7 feet tall at Gettysburg. He had ascended to the pinnacle where the better angels of our nature reach down to assist struggling men.

Remarks by Gov. Ernest F. Hollings Before the Washington Light Infantry Annual Banquet, Charleston, S.C., February 23, 1959

EXTENSION OF REMARKS
OF

HON. L. MENDEL RIVERS

OF SOUTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES

Monday, March 2, 1959

Mr. RIVERS of South Carolina. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I include herewith an address by His Excellency Ernest F. Hollings, Governor of South Carolina, delivered before the Washington Light Infantry, Charleston, S.C., one of the oldest and most distinguished organizations of its kind in the entire country:

REMARKS BY GOV. ERNEST F. HOLLINGS, BEFORE THE WASHINGTON LIGHT INFANTRY ANNUAL BANQUET, CHARLESTON, S.C., FEBRUARY 23, 1959

It is truly inspiring to join in this memorable anniversary of an organization so closely enmeshed with the history and the hopes of our great Nation. Born in the trying infancy of a new Union, the Washington Light Infantry has since marched through the crucibles of war and the quiet testing of peace. If any member of that first unit in 1807 could have lived through all the decades since, he would have a vivid story to tell of the ebb and flow of our national defense. In 1812 the Nation met its first military test after union and the Washington Light Infantry was mustered into service. In 1847 came the Mexican War and Washington Light Infantry members formed the nucleus for the gallant Company A from Charleston in the famous Palmetto Regiment. In 1843 the Washington Light Infantry took part in the opening of the Citadel after striving diligently to help achieve the military college for the education of our young men, and in 1882 it was again the Washington Light Infantry which came to the aid of the Citadel in getting the institution reopened after the holocaust of civil war. During that war Washington Light Infantry officers and men

formed three companies and fought for the South with courageous distinction. In 1916 came service on the Mexican border and in 1917 the Washington Light Infantry was again called to active duty and rendered distinctive service in some of the greatest battles of World War I. After the war came reorganization as Company B, 118th Infantry, South Carolina National Guard, and in World War II the call to active duty came again for overseas service while the Reserve company took over duties at home. Today this splendid unit, still flying the historic Eutaw flag, stands in readiness for whatever challenges may come.

Details of military organization may differ with the times, but the type of our military institution was determined in the earliest days of our Government. It has not changed since General Washington's day. It recognizes that in a democracy it is the duty of every citizen to defend those things which we all hold dear. The real measure of our national strength is the devotion of the individual American to the well being of America, and the preservation of the human values for which America stands.

This is the philosophy upon which our National Guard, of which the Washington Light Infantry is so vibrant a part, is built. The philosophy of the citizen soldier must always stand at the heart of our defense planning in a democracy such as ours. The second section of the Bill of Rights as contained in the original 10 amendments states:

"A well regulated militia being necessary to the security of a free state, the right of the people to keep and bear arms shall not be infringed."

That short but all-important section is the foundation on which our entire National Guard structure rests. Its referral to the people is particularly significant in this matter of moral core strength for a successful military force. It again relates the military to the people from which it springs.

We have seen events at times which threatened the strength of the Guard, but the Guard has stood fast in resisting these challenges and remains today as the Nation's largest and most active military reserve. As your Governor, I look forward to my associations with our South Carolina National Guard and pledge my efforts in its behalf wherever needed.

Often here at these Washington Light Infantry occasions we have heard described the tremendous military budgets we face today. These facts are but strong reminders of the total, global nature of the struggle in which we are now engaged, transcending the economic, psychological, and political as well as the military. National leaders have warned us well of the dangers involved—of the need and great cost of adequate military posture. They continually warn us also of the dangers of losing by default through economic collapse.

These things are true. It is well that our people be alerted to these dangers. However, there is another field of just as vital importance which normally goes unheralded. This is the will to win in the heart of the individual citizen, both in and out of uniform. Call it patriotism, moral courage, or call it what you will—if we ever have this quality shaken we may well fear the worse. It is this vital element which I would like to discuss with you tonight.

When Minuteman Joseph Smith grabbed his rifle from the wall and leveled it at approaching redcoats in 1776, there was no question as to why he was there. He was protecting his very home from a hated invader. It was as simple as that.

But down the long march of history as warfare and reasons for warfare have broadened in scope the question of why we fight has become more and more complex, and more and more difficult to comprehend. It was our own Gen. Charles P. Summerall, late president of The Citadel and revered friend of the Washington Light Infantry, who once said while serving as Army Chief of Staff, "The average mind is such that it does not analyze abstract causes or even the great principle over which wars are fought. Men are elemental and practical and cling to real things." World War II veterans, for example, remember well the great lengths to which the Government went in informing them of why we fight. The average soldier, sailor, airman, and marine still sometimes found it hard to answer that question. As one of the generals in charge of this indoctrination expressed it, "In common with too many of their fellow citizens, these young men had little knowledge of the human values at issue in the world arena, values that they would soon be called upon to preserve at the ultimate price of their lives. Was it not the poet, Vachel Lindsay, who passionately cried, 'Not that they die, O Lord, but that they die like sheep'?" Before World War II we paid no attention to such indoctrination—we had always taken for granted the ancient virtues of our people, but in 1941 these complacent assumptions came down like a house of cards. For in that year we found young men in the Armed Forces divided and confused, ignorant of world events. Since they saw no danger, they saw no compelling reason why they should be made to serve.

The long-range, postwar, need for military strength was also obviously not grasped by our people as tremendous pressure was brought to bear to bring the boys home, resulting in the quick destruction of what had been the greatest fighting force in history. This occurred while our eventual enemy, Soviet Russia, was holding firm and preparing for the struggle she saw ahead.

Then we come to Korea and the question of why we fight became even more complex and remote from the man on the firing line. The tempo of indoctrination to answer that question had to be stepped up, and still the answer was not clear. Views among our top military and political leaders were so conflicting and dissension so serious among our citizens that the will to win for the first time came in jeopardy. This was climaxed by the introduction into the annals of the American soldier of a character known as turncoat.

I do not make this as a treasonous observation. Certainly, it is not my intent to degrade the character, ability and courage of the Korean soldier. Never has America fielded a more courageous soldier and yet never with less purpose. He was the civilian yanked from the peacetime summer of 1950, with no warning, and placed in a land very few of us had ever heard of before. There was no sinking of a Lusitania. There was no Pearl Harbor. These United States had not been invaded, and no country we had promised to defend had been trespassed.

Yet, while everyone was talking peace and taking summer vacations, there he was, thousands of miles from home, told to kill or be killed; to sweat and die; to freeze and die; to suffer hardships beyond comprehension; and do everything else but one thing—be victorious. He was told he could not win. Yet he fought on more bravely than ever. He gave blood to his fellowman because the people at home would not contribute blood. He gave to the Korean homeless because the people at home would not contribute to the Korean homeless. For us, we ashamedly call it a conflict, and without shame signed an armistice, leaving him on the battlefield and in the enemy's prison camps.

Gen. Mark Clark, the United Nations commander at the time of the armistice and the greatest patriot of our time, has reported that several hundred American prisoners known to be held by the Communists were left behind. Although the United Nations has since obtained the release of some, General Clark knows, and others in authority know, that there are tonight American soldiers languishing in Communists prisons. These same soldiers were told in 1950 "Home by Christmas." Tonight as we celebrate we hear their parents' plaintive plea, "Which Christmas?" Will our moral courage withstand the pressures which plague us as we try to justify the fact that several years after the armistice, the greatest freedom-loving Nation on earth still has not obtained freedom for these of its sons? What effect does this have on the will to win?

Finally, here in democracy's supposed great bastion, we see internal discord and conflicts which further cloud the vision of the individual citizen in his sense of moral duty to his country. We see U.S. troops thrown into the capital of a sovereign State to enforce measures perpetrated by an increasingly powerful Federal Government. We see troops committed to decimate rights and responsibilities carefully reserved for the States by those who fought for freedom in the 1770's. Though it does not affect our basic loyalty, what about our enthusiasm for the Federal Government? What damage has been done to the soldier's will to win?

When we see a U.S. Supreme Court seemingly intent on using its own interpretation of our Constitution to upset the basic source of our governmental strength—its balance of powers—we rightfully fear some shaking of allegiance to rulings of that Court. The same is true of the instruments of the Court—troops—and the allegiance of the troops.

When we see rights of minorities suppressed before the will of highly organized, powerful pressure groups, we rightfully fear some degree of damage to the system that permits such a tragedy. President Washington, for whom your own illustrious group was named, was careful in his Farewell Address to warn against the dangers of small but artful minorities. He said: "However combinations or associations of the above description may now and then answer popular ends, they are likely in the course of time and things to become potent engines by which cunning, ambitious and unprincipled men will be enabled to subvert the power of the people and to usurp for themselves the reins of government; destroying afterwards the very engine which lifted them to unjust dominion."

When we know that all these things are aided and encouraged by foreign ideologies toward an ultimate goal of a divided America, we have cause for worry and concern.

All these things add to the complexity of building and holding a national defense posture of sufficient strength to guard us militarily, ensure economic solvency and marshal the moral courage of our citizens in the face of the greatest threat we have ever faced.

No matter how far we may move in achieving spectacular new space age weapons of war, we must never forget the finest asset we have ever had or ever will have is the moral strength and courage of the individual citizen—whether he be manning a weapon or holding firm at home. Repeatedly the great captains of history warn that the critical factor in war lies in the moral field. From Bonaparte to MacArthur, the chain of testimony is unbroken—there is no substitute for the will to win. An Army derives its moral strength from the people it defends—from their confidence, their institutions, their beliefs. There is no substitute for this. The nation's will is the soldier's will; the nation's faith is the soldier's faith; the nation's virtues are the soldier's virtues. No army is stronger than its beliefs. Around a hard and enduring moral core we must build our military strength. To do otherwise is to build a colossus of straw.

These are times that demand the best in all of us. No mere outlay of money or

physical resources will bring a day, an hour, or a moment of freedom. Its price is vigilance, sacrifice, and service on the part of each individual American. Gen. J. Lawton Collins, former Army Chief of Staff, put it well when he said, "The most important element of armies has always been men imbued with the will to win. And today the strength of nations is still measured by their ability to produce such men."

National defense is no longer the simple matter of grabbing a gun and taking the nearest cover. It is rather now so complex that it challenges us to the utmost to maintain strength and unity in the hearts of our people, in the fiber of our national economy and in our weapons of war. And, as we well know, it is much more difficult to keep one's guard up in times of relative peace than when the enemy is standing across the firing line.

In our preoccupation with weapons and dollars we must never forget that greatest armament of all—a diligent, courageous, united, and loyal citizenry which knows in its soul that the American way of life is worth any sacrifice to maintain and protect.

It was not the power of the barbarian hordes at the gates of Rome that brought to its knees that civilization which had stood for 10 centuries. Rome was finished long before the enemy finally attacked. It was finished because the character of its people had deteriorated. In their quest for pleasure they had lost their ideal of courage, industry, morality, and national unity which had made Rome master of the known world. It failed because the individual Roman citizen lost his own personal identification with respect to the defense of the state, not only on the battlefield but in every aspect of life. And in more recent years, we witnessed military collapse in France and the Netherlands following moral collapse in the face of the Nazis.

It is fallacy to think that since you are a superior civilization you will always be victorious in world conflict. The oppressed Chinese overthrew Genghis Kahn and the Huns defeated superior Rome because of guts, the will to win. Civilizations survive only when their people have faith and courage in their system. Here in America we feel we are a superior people, and so we are in many respects. But the question of our survival depends on whether we can hold fast to that superiority of spirit which has marked our past victories.

Let us remember that in any future war, whether it be limited or total geographically, it must be total in our human effort if we are to be successful. All who are called must go. All who are called must fight. All who survive must be allowed to come home. All of us—at home or in the field—must stand united if we are to be victorious.

In the sweep of history our military bulwarks will not protect us if we as individuals fail to accept our individual responsibilities with total dedication. May God help us if we ever waiver in our faith in America and our unity as Americans, for therein lies our future safety as a nation.

New Commissioner of the Pennsylvania State Police

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Monday, March 2, 1959

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Wilkes-Barre Times Leader of February 24, 1959:

POLICE HEAD CONFIRMED

Confirmation by the senate of the appointment of Frank G. McCartney of Lanford as commissioner of the Pennsylvania State police was long overdue.

In the first place, Governor Lawrence is entitled to pick his own subordinates. Commissioner McCartney, a member of the State police for two decades as well as a State investigator and a coal company police chief, was the first and only police commissioner choice of the State's new chief executive. He quite properly rejected a suggestion to designate another for the post or to consider a compromise since he is responsible for his cabinet members.

The only objection, raised to Commissioner McCartney, was a matter of speculation about his executive ability. He had not been commissioned in the State police and this was the sole basis for the opposition to him. His record as an officer was excellent and his experience broad.

Former associates in the State police, who should be good judges, privately expressed the belief Mr. McCartney would be a capable leader. This expression of confidence, in itself, was reassuring, since it constituted a high compliment to the nominee.

It is only logical to assume a man, who was a member of the force so long and who is familiar with the problems of law enforcement in the Commonwealth, ought to be able to handle the job. To be sure, it is a heavy responsibility, but the new Commissioner has a background that indicates he will measure up to the challenges in the 4 years ahead.

The Wild Redtape Yonder

EXTENSION OF REMARKS
OF
HON. JOHN W. McCORMACK
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Monday, March 2, 1959

Mr. McCORMACK. Mr. Speaker, under permission to extend my remarks I include an editorial appearing in the Boston Herald of February 19, 1959, entitled "The Wild Redtape Yonder," where a resident of California received a bill from the Air Force for $13.94 and the invoice was 28 pages long and bore the signatures of 2 lieutenant colonels, 3 majors, 1 captain, a first lieutenant, and 15 civilian department heads.

Conditions of this kind, wherever they exist in any department or agency, should be eliminated and done by the department or agency itself, and if not, the appropriate congressional committees should make a thorough study of this matter because it is apparent that tremendous sums of money could be saved.

THE WILD REDTAPE YONDER

A California man has received a $13.94 bill from the Air Force. The invoice is 28 pages long and bears the signatures of 2 lieutenant colonels, 3 majors, 1 captain, a first lieutenant, and 15 civilian department heads.

The recipient of this awesome document, it seems, cracked a radiator on a forklift truck he was operating as a civilian employee at an airfield in 1957. He's willing to pay, having in mind that payment will defray, at least in part, the cost of billing.

We salute this man for his concern for his Government. And we recommend that the diligent officials concerned be awarded, forthwith, the distinguished filing cross, with paper clip cluster.

First Washington Jazz Jubilee

EXTENSION OF REMARKS
OF
HON. JOHN BRADEMAS
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 17, 1959

Mr. BRADEMAS. Mr. Speaker, an exhibition entitled "Seven Ages of Jazz" will be opened this afternoon in the Library of Congress, where Americans may glimpse a little of their musical past during March while the Congressional Circle of Friendship House is sponsoring the first Washington Jazz Jubilee. A large group of congressional wives—many of whom live or have lived in Southeast Washington—has planned this jazz jubilee for the benefit of Friendship House, a settlement that has served the Southeast community for more than half a century. Culturally, however, it will benefit all jazz admirers in the Capital, who may participate in one aspect or another of this unusual celebration.

A jubilee can be either "a season or an occasion for general joy," Webster says, and this jubilee promises to be both. Its season will be the month of March; its occasions will be various. The Washington Jazz Jubilee began March 1, with last night's lecture on jazz at the National Gallery of Art by Prof. Marshall Stearns of Hunter College, who is executive director of the Institute of Jazz Studies. The next event will be the opening of the Library of Congress exhibit at 4 p.m. today, when the Library and the Congressional Circle will hold a preview of "Seven Ages of Jazz." On March 12, the Gres Gallery at 1729 20th Street NW., will open a special exhibit of primitive African sculpture entitled "Rhythms in Form and Music." The celebration will reach its climax on March 16 with a unique concert by outstanding jazz musicians at a fund-raising benefit for Friendship House.

Throughout March the Library of Congress exhibition may be viewed in the North Gallery on the ground floor of the Main Library Building. There you may see music manuscripts, published music, books, recordings, and photographs selected from the Library's collections to recall some of the story of jazz. The display illustrates the seeds of jazz in folk music; its early appearance and development in New Orleans, Memphis, Los Angeles, San Francisco, St. Louis, and Kansas City; its flourishing in the "big time" of Chicago and New York; and its spread to nearly every corner of the world.

Many famous performers and composers have created and developed the fabric of jazz and its countless styles. They have made it a vital stream in 20th century creative effort, and they have given stimulus to the popular song, the

musical comedy, and the music of the opera house and concert hall. Many of these figures of the jazz world will be featured in the Library's exhibit. A number of their works will be performed at the Washington Jazz Jubilee on March 16.

This jazz concert, to be held in Sheraton Hall at the Sheraton-Park Hotel on Monday evening, March 16, is the first program of its kind to be presented in the Nation's Capital. Mrs. Richard Bolling, the wife of my colleague from Kansas City and a well-versed authority on jazz, is general chairman of this benefit.

Because of the excellent talent and program proposed, I understand it is attracting nationwide attention. Mrs. Bolling and her committees have planned the production in two parts. In the first half of the evening, top-ranking jazz artist will present a fast-paced and colorful history of jazz by performing its music from such early forms as old spirituals, work songs, and New Orleans funeral marches to the contemporary "cool" school of modern jazz. Musicians brought to Washington for this event will illustrate the best in jazz from Congo Square to Carnegie Hall. After an intermission, the performers will break loose in a swinging "jam session" for jazz aficionados in the audience.

Some 1,500 guests wil join in this benefit for Friendship House, which at the present time faces new challenges and even greater responsibilities because of urban redevelopment in its area. Tickets may be obtained by telephoning Friendship House. The Jubilee is fortunate in having Mrs. Eisenhower and Mrs. Nixon as its ranking patrons among many members of official Washington and of the diplomatic corps, as well as other prominent Washingtonians.

The Congressional Circle of Friendship House has had advice from members of the Newport Jazz Festival in planning its benefit program, and its producer is Willis Conover, maestro of the Voice of America's popular "Music USA," a daily 45-minute program broadcast around the world. With "The World of Jazz," another program of the Voice, it is among our most popular broadcasts overseas. I need not remind my colleagues of the universal appeal of American jazz, nor of the fact that our jazz musicians have served us as excellent emissaries abroad, even in Iron Curtain countries.

Hon. Sid Simpson

SPEECH
OF
HON. LESLIE C. ARENDS
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 26, 1959

Mr. ARENDS. Mr. Speaker, no one could have a closer friend, nor a better one, than I had in SID SIMPSON. We consulted with each other on many matters, each of us well knowing that we could always rely upon an utterly frank expression of opinion. Whether he agreed with you or not, SID was one of those individuals that said exactly what he thought. I always found in him a man of convictions with the courage of his convictions to express them frankly.

SID was an outstanding Member of this body. He served his district well. This is attested to by the number of years he served with us. As a member of the Committee on Agriculture, he contributed much to the farm area he represented and contributed much to our deliberations on various farm problems.

He had a keen sense of humor. Often his humor in stories and anecdotes were not solely to amuse but to make a point. With an anecdote he could say more pointedly and more emphatically than many of us could say with many words.

With the passing of SID SIMPSON there is indeed a void in this House. I miss him not only as a colleague. I miss him as a personal friend of long standing.

His lovely wife is serving here in his place. I extend to her, and to his two wonderful daughters my sincere sympathy. Theirs is a great loss. We share that loss with them.

The Library of Congress Looks at Reclamation

EXTENSION OF REMARKS
OF
HON. WAYNE N. ASPINALL
OF COLORADO
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 5, 1959

Mr. ASPINALL. Mr. Speaker, in November 1957, the Irrigation and Reclamation Subcommittee, of which I was then chairman, requested the Legislative Reference Service of the Library of Congress to prepare an objective and factual report on the Federal Reclamation program. The report was furnished the committee on December 1958, and has since been printed as committee print No. 1 of the 86th Congress. This impartial and unbiased study by the Legislative Reference Service indicates that the Federal reclamation program is clearly an important element in our national economy. The report contains valuable material and statistics relating to the program and I commend it to all of my colleagues in the Congress as an excellent professional treatment of the subject.

This report has received favorable editorial comment throughout the West. As an example, I am including an editorial from the February 18 issue of the Sacramento Bee.

THE LIBRARY OF CONGRESS LOOKS AT RECLAMATION

The Library of Congress, through its legislative research service, has compiled an appraisal of the national reclamation program and one can assume it to be a document without bias.

It reports among many other things that during 1957 the Federal Internal Revenue Service collected $341,607,000 in taxes, mostly on incomes, from areas served by the Federal reclamation projects.

Since many of these undertakings have been built in areas which otherwise were in large part unproductive, it can be assumed the IRS collections largely represented money it otherwise would not have received.

Over the period of years these projects have been in existence these collections have totaled $3,218 million, or some $300 million more than the sum the Government has spent on all the reclamation works.

This, of course, has no bearing on the fact earnings from these projects, from the sale of water and power, have returned $355,514,171 to the Federal Treasury. Nor does it take into consideration the hundreds of millions of dollars in nonreimbursable benefits such as flood control, navigation improvement, recreation, etc.

Well over half of the repayments, $189,134,119, have come from the sale of power. In the case of the Central Valleys project, $66,864,658 of $68,785,061 in repayments has accrued from electric energy.

In numerous other ways the report reveals how the reclamation program has made direct contributions to the national economy moneywise. In additional benefits, such as in the production of crops and of power for the aluminum industry so vital during wartime, the projects have been of inestimable national value.

All of this exposes the nonsense of claiming the people in the States of the South and East are subsidizing the western reclamation projects. If anything it is the other way around.

And in large measure the success of the projects has been due to the generation of low cost public power which the private power lobby would abolish.

Barricades of Freedom—Life Line Radio Broadcast by Wayne Poucher

EXTENSION OF REMARKS
OF
HON. B. CARROLL REECE
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES
Monday, March 2, 1959

Mr. REECE of Tennessee. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include therein the text of an address by Wayne Poucher, radio minister of Life Line Foundation, Inc., a religious and patriotic educational movement.

Life Line broadcasts are heard daily, 6 days a week, over a large number of radio stations throughout the Nation.

The address follows:

If I were one of my own forefathers, I think I would disclaim me. As a matter of fact, I think our forefathers, if they could see us today, might give serious consideration to disclaiming the lot of us for the simple reason that we have given such a poor account of ourselves in handling the things which they left us. We have demonstrated miserable stewardship in many respects in preserving the heritage they founded and delivered into our hands.

It is not my belief that Americans as a people have lost their love for freedom. But it is my conviction that we are falling down on the all-important job of defending our freedom against those who seek to destroy it. In fact, most of us are not even aware, perhaps not even interested enough to realize that there are efforts being made to destroy our freedom. A freedom which has come down to us at awful cost. We are just as certain that once Americans wake up to the danger, this country will be safe, and so long as America is free, enslaved people everywhere will continue to have hope.

In this effort against the mistaken enemies of freedom, we have the greatest fortification to stand behind that any force has ever had. That is simple faith in God. The history of mankind reveals that the courage to be free has always sprung from a deep abiding faith. Sadly the history of mankind also reveals that every time man has lost his freedom was when his faith had grown cold. So long as we maintain a strong, wholesome, vigorous faith in God, we are well equipped for the struggle against godlessness, the philosophy of the mistaken. If there ever was a natural enemy to atheistic communism, it is faith. This is our main fortification, it may be our last hope.

The second barricade behind which America can stand in our fight for freedom is American business—the most vigorous economic institution ever built on any foundation. It so happens that our foundation is free enterprise, the opportunity system.

But American business, which spends billions of dollars a year for advertising, is not pulling its weight in the hard struggle against freedom's enemies. As a matter of fact, you have only to turn on your radio or television set to find out to what an amazing extent American business will pay for the sponsorship of programs containing subtle propaganda designed to destroy the very system that makes business possible.

There is virtually no end to the influence of advertising on the thinking of Americans. Advertising tells us what kind of toothpaste to use, what kind of clothes to wear, what kind of food to eat and where to buy it, what kind of paint to use on our house, what kind of automobile to drive. Why can't advertising be used to tell of the threats to our freedom and how we can meet those threats?

Don't you agree that the vast majority of Americans will walk an extra block or drive an extra mile to spend their merchandise dollars with a patriotic American merchant who has the courage to say, "I believe in my own country?" Wouldn't you do it? This can be our second greatest fortification, working alongside the tremendous force of a faith-inspired love of freedom.

New, Jesus Christ did not teach any one form of government as a political entity. His emphasis was on the soul. But He taught the dignity of every individual soul. Jesus taught men to love freedom and to be free. Jesus taught that each individual is a sovereignty. When men and women belong to God, they do not fear what man is able to do to them. They have courage to stand for right. It is this torch which has given light to the efforts of man to be free ever since. When the last of His apostles admonished those in whose hands the welfare of the cause of Christ would be left, He said: "Look to yourselves that you lose not those things which we have wrought." Look to yourselves—you must not depend on the other fellow to do it. This is an individual matter. You can't leave it to George. You've got to do it yourself.

Right now, the mighty combined voice of seven generations of our forefathers is echoing down through the corridors of time to tell us, "Look to yourselves that you lose not those things which we have wrought."

This is not a struggle for one man or for a small group of men. It has to be a nationwide undertaking. It calls for knowledge about the objectives of the mistaken. It calls for courage, and it calls for a willingness on the part of Americans everywhere to let the world know that we love our country and our freedom.

Americans have never been lacking in resourcefulness. We need in this hour to summon up determination equal to our resourcefulness—determination not to let freedom's enemies win by default. Determination to make our faith a vital, deep, abiding guide in our every thought and deed. Determination to make our free enterprise system work for freedom as well as for profits. If we can summon up the determination demanded by the necessity that exists, then America will be free for as long as we are disposed to defend it. God willing, freedom-loving Americans will never permit the mistaken to enslave our land.

Washington Report

EXTENSION OF REMARKS
OF
HON. BRUCE ALGER
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 3, 1959

Mr. ALGER. Mr. Speaker, under the leave to extend my remarks in the RECORD, I include the following newsletter of February 28, 1959:

WASHINGTON REPORT

(By Congressman BRUCE ALGER)

George Washington's Farewell Address, of September 17, 1796, is read yearly in the House and Senate on his birthday. Though his principles are timeless and enduring, it is ironic to recognize how we moderns seem determined to shut our eyes to the great abiding truths. His admonitions include:

1. The importance of the Federal union of States, and strict observance of the Constitution and its proper amendment process (no amendment by reinterpretation);

2. Government by separated divisions is good, each checking the other (no usurpation of power by one branch or of State powers by the Federal Government);

3. There can be no national morality if the sense of religious obligation and principle fails in us. (How do we measure up here?)

4. Preserve public credit, be selective in tax, avoid debt, do not burden posterity (and now even our Government bonds are considered less desirable as investments because Congress has depreciated the value of our money by profligate spending);

5. No entangling alliances or favored treatment of any nation, but rather commerce and enlightened self-interest (check our foreign aid, trade programs, and alliances against this).

The payroll of a Representative is public information, and should be (although this is not so in practice in the Senate). Who is hired and what is paid, within limits, is left largely to the discretion of the individual Congressman. Some hire kinfolks, and some pay higher than others. The judgment of the Congressman is the deciding factor and is, of course, subject to approval or disapproval by the voters every 2 years. For my part, I believe in running my office like a business, with incentive pay the factor—pay well as it's earned but only for equivalent performance, value received. On this basis, my staff measures up. No secrets either; the pay records will always stand public scrutiny.

The criticism of the Senate leadership leveled by Wisconsin Democrat WILLIAM PROXMIRE points up a problem of concern to all Congressmen in both parties. Under our setup, Congressmen are elected to represent specific areas, not parties. But just as power has gravitated from the States and localities to Washington, power in the Congress has tended to concentrate in the hands of the majority party's leadership. When as at present a party's majority is somewhat lopsided, and there's even a modicum of party discipline, the power of the leadership can be rather considerable. Particularly is this so at present when Democrats in both Houses are led by men from the same area who have long worked in close cahoots. Representative government may not be very representative. A legislative program may depend on a party line and how that line is determined can be vitally important. If it's arrived at by political masterminding at the top rather than from the bottom up, defections are inevitable among Congressmen really trying to be representative of their states or districts, rather than just acquiescent cogs in a party machine over which they have no control.

Debt retirement by the Federal Government received some attention this week, with several Texans proposing that a yearly payment on our debt be included in the budget. Many, including myself, applaud the idea, and I want to help in such a worthy effort. But here's the rub: How can we retire the debt by any amount when the Congress continues to spend more than is taken in? We must cut waste and welfare programs so that there is a balance of cash on had in the Treasury to pay down the debt. Isn't this so? The irony of this debt retirement proposal is that some of those sponsoring it are among those regularly voting for bigger Federal spending. For example, one gentleman now voicing support for debt reduction voted only 14 percent for economy and 86 percent for big spending last year; another voted 70 percent of the time for big spending last year. Perhaps this inconsistency was the reason for the exhortation of the public to request less of the Federal Government, and this certainly makes sense. However, I hold that a constitutional democracy in a republic demands that our representatives exercise judgment and self-discipline, be leaders, not followers. Therefore, it is up to Congress to vote "No" to big spending proposals and seek to eliminate waste, and to prevent raids on the Treasury by organized pressure groups.

The battle of the budget (and debt retirement) has become a battle of survival for our type of society and human freedom, as I see it. Surely, it is important for each Member to be more concerned with preserving the fiscal health of this great Nation (through the self-discipline of reduced spending) than with his seat in Congress. It's a simple matter of which comes first. Believing this, I intend to press this viewpoint, questioning no one's motives or integrity. If I must, disagree—but without being disagreeable, disliking only the ideas, not the people involved.

The Low-Rent Housing Program Is Vital to Community Growth

EXTENSION OF REMARKS
OF
HON. GEORGE M. GRANT
OF ALABAMA
IN THE HOUSE OF REPRESENTATIVES
Monday, March 2, 1959

Mr. GRANT. Mr. Speaker, I recently was privileged, along with other Members of the Alabama congressional delegation, to attend a meeting here in Washington of the Alabama League of Municipalities.

Reports were made by members of the league, among these being that of Hon. Frank Sikes, mayor of Luverne, Ala. I am privileged to insert his report for the RECORD.

THE LOW-RENT HOUSING PROGRAM IS VITAL TO COMMUNITY GROWTH

(By Frank Sikes, Mayor of Luverne)

First, I would like to talk about Alabama's need for public housing and then delve into

the reasons why an expansion of the program is necessary. I would like to say that the member cities and towns of the Alabama League of Municipalities appreciate—in fact we are proud of—the support the Alabama delegation has given to the low-rent public housing program and urban renewal through the years. It is largely by virtue of your interest and support that these programs have moved forward. I predict that Alabama will be second among all States in the Nation in the number of localities participating in the public housing program before the end of the fiscal year. We had 125 towns participating on January 1, compared to 112 municipalities at the close of 1957. (Georgia is first with 197 towns and cities enrolled and Texas was second at last account on June 30, 1958, with 125 communities.)

The need for more public housing in Alabama is twofold. First, there is the normal or voluntary need. This is supported by the number of applications that may be expected from municipalities which have public housing and will require more units such as Demopolis and Opp, for example, and communities such as Clanton, Atmore, and Flomaton, which have applied, or are expected to apply, for public housing for the first time.

ENFORCED NEED FOR PUBLIC HOUSING

Second, there is the enforced need. This need is imperative. You are familiar, of course, with the necessity for public housing to house families displaced by urban renewal. In Alabama and the southeast 75 percent of all families to be displaced by urban renewal will be eligible on an income basis for public housing. (See testimony Walter E. Keyes, Regional Administrator, Housing and Home Finance Agency, before Housing Subcommittee of the Senate Committee on Banking and Currency, Mobile, Ala., Dec. 30–31, 1957, p. 9.)

I am told that estimates given the housing subcommittee of the Senate and House disclose that half of the families to be displaced by urban renewal in the United States are within the public housing income brackets. We are convinced that we cannot have urban renewal without public housing, because the Housing Act makes it mandatory that standard housing accommodations must be provided for families to be relocated under the urban renewal program. We could, of course, have urban renewal for a time. Time, it has been said, is the servant of all bureaucrats. We can plan and plan and file a carload of blueprints. But there will come a day when the families will have to move and their homes will be razed. I hope to be around at that time.

But let's forget urban renewal for a minute. That subject will be discussed more fully by another mayor this morning. There is a need that is more compelling. That need is for the rehousing of families displaced by the new highway program. The law does not require the rehousing in standard homes of families displaced by superhighways and expressways. It is the moral obligation of the cities, and that is all. Highway construction is let to contractors. Time is money to the contractors. They are going to move in with their bulldozers and road building equipment on schedule. They aren't in the housing business. These superhighways are going to uproot thousands of families in Alabama. There is no surplus of housing in any city in our State. Some of the families perhaps can buy homes under section 221, but those on the public housing income level have neither the credit nor the income to buy a section 221 house. They do well to feed and clothe their families.

HOUSING FOR LOW-INCOME FAMILIES

Gentlemen, the average annual net income of families moving into public housing in the United States during 1957 was only $2,138. In the Southeast the average annual net income for the same period was $1,988.

We must have public housing ready for them, even if the law doesn't require it, because it is the right thing to do and because there is no other way they can be rehoused.

Let me cite an example of preparedness for this highway program. The housing authority of the city of Mobile has just applied for an additional 2,180 low-rent public housing dwellings to rehouse families to be displaced by the new highway program. Mobile has 3,776 low-rent housing dwellings already in operation. Mobile also has an urban renewal program and in time will undoubtedly need more units because of urban renewal pressure. Birmingham has 4,262 public housing dwellings in operation or under construction and has an additional 1,500 dwellings reserved. Mayor Jimmy Morgan tells us that he hopes these 1,500 units will be enough to take care of the low-income families to be displaced by highway construction. Birmingham also has an urban renewal program. Montgomery has 2,049 public housing homes in operation and a backlog of only 72 reserved. They will probably need additional units as forerunners to the highway building. Again there is no estimate of the number that will be required for urban renewal.

STATUS OF PROGRAM AS OF JANUARY 1, 1959

Our able executive director Ed E. Reid has forwarded to you an official summary of the status of the low-rent public housing program in Alabama as of January 1. This summary showed that there was a backlog of 2,610 dwellings in the program reservation stage and 16 municipalities have recently applied and were awaiting program reservations. The units reserved represent the voluntary reservation reservoir and do not include the 2,180 Mobile has requested. The State has an additional 3,118 units under annual contributions contract and awating construction, while 19,918 dwellings are currently in operation or under construction in the State.

Gentlemen, few things have happened in our cities that have meant as much as the low-rent public housing program. Public housing has given families an opportunity to live comfortably and to rear their children with due regard for privacy and decency because overcrowding of families is not permitted. We think that it is doing the job it is supposed to do. These homes are assets in our communities to which the people point with pride. We, too, would like to find some alternative for the housing of low-income families but we know there is no alternative. It hasn't been found in 20 years and you know and we know that we aren't likely to find a substitute for a sound subsidized program. We appeal to you to continue your support of an adequate public housing program in the interest of our growing communities and their low-income families.

Economic Ills of the American Farmer

EXTENSION OF REMARKS
OF
HON. E. ROSS ADAIR
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Monday, March 2, 1959

Mr. ADAIR. Mr. Speaker, a few days ago HOMER E. CAPEHART, the senior Senator from Indiana, made an address in Miami, Fla. In the course of his remarks, he warned both big business and big labor of their responsibility to the American farming community. Under unanimous consent to extend my remarks, I herewith include excerpts from his remarks:

MIAMI, FLA., February 27.—U.S. Senator HOMER E. CAPEHART tonight warned big business and big labor that each has a grave responsibility to become concerned with and help to solve, wherever possible, the economic ills of the American farmer.

"Too many of you have been ignoring for too long the problems which beset our farmers periodically" Senator CAPEHART told a group of bankers and businessmen from throughout the Nation in a luncheon speech at the fifth anniversary ceremonies of the Community National Bank.

"I foresee the possibility that if something isn't done to stabilize the agricultural situation at a sound level within the next 24 months, the entire economy will be in for a severe shock—a shock that would do us much damage, perhaps more, to business and labor than it would to farmers themselves.

"It is just commonsense that when the farm economy goes to pot everybody is going to suffer. The economy is bound to suffer because everything the farmer produces comes from Mother Earth, the only real source of the new wealth required to keep our economy well fed and healthy.

"It follows that when the farmer suffers everybody suffers. Business falls off. That means that eventually jobs for workers fall off. And if you let this process go on long enough, you end up with a serious, serious economic situation.

"That, of course, we must avoid. And what I am saying to you gentlemen—to big business and big labor because we have both in this country—is that for your own good and the good of the American economy generally you had better get busy and study this farm problem and try to do something about it.

"The economic interests of the 6 million farms in this country are your interests too."

The Late Hon. Herman P. Eberharter

EXTENSION OF REMARKS
OF
HON. ROBERT L. F. SIKES
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 5, 1959

Mr. SIKES. Mr. Speaker, once I read a short and not very well written bit of verse by an unknown author. Despite its grammatical shortcomings, the message it carries is most evident. It reads:

A man of greatness is he
Who lives to serve his neighbor.
No matter how tough the going may be
He continues to give his best.

I knew the late Hon. Herman P. Eberharter, Representative from the 28th District of Pennsylvania, well and intimately throughout the period of my service in Congress. Somehow I feel that a little bit of verse could well be applied to him.

Its simple words by no means define the many contributions to mankind that Herman Eberharter gave through his untiring devotion to his duty and through his effective and capable leadership. He was solid, sound and substantial. His death is indeed a great loss to all of us and I join with his friends in expressing the deepest regrets to his

family. I take comfort, however, in the fact that his accomplishments during his lifetime and his fine spirit will be remembered as an example for others to follow.

Two Strikes on Warren Court

EXTENSION OF REMARKS
OF
HON. ALBERT H. BOSCH
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 18, 1959

Mr. BOSCH. Mr. Speaker, I regret that Congress failed to take corrective action last year in the most important field of preemption of legislative prerogatives by the Supreme Court of the United States. During the 1958 campaign, I had occasion to "feel the pulse" of the people in my district on the question of legislation to correct certain decisions of the Court which have clearly encroached upon the legislative prerogatives of the Congress. I have found that the people expect action by Congress in this field. I trust that we will be able to deal with this problem in the not too distant future for it is most necessary that we do so, particularly in the present time of crisis which once again demonstrates the futility of expecting anything but duplicity on the part of the Communist regime.

Under leave to extend my remarks, I include an editorial from today's edition of the New York Daily News which I commend to the attention of my colleagues:

TWO STRIKES ON WARREN COURT

The Earl Warren Supreme Court now has two strikes against it, pitched by those who know the Warren court best.

Some months ago, the association of the States' supreme court chief justices issued a long, detailed and strongly worded statement about this tribunal.

It was charged with frequently going outside its proper field of law interpretation, and was earnestly urged to try using some self-restraint for a change.

Last week in Chicago, the American Bar Association's 246-member house of delegates—the ABA's ruling body—overwhelmingly adopted and made official a report on the Warren court's pro-Communist leanings turned in by the ABA's special committee on Communist tactics, strategy and objectives.

This blast summed up in detail the court's 23 worst pro-Red decisions, plus one case still not finally disposed of, and recommended congressional action to undo these rulings' damage to the Nation insofar as it can be undone.

Such action would include laws enabling the States to enact and enforce statutes against sedition * * * restoring to the Smith Antisubversive Act of 1940 its original provision that it is a crime to advocate the U.S. Government's violent overthrow * * * cracking the Warren court's handcuffs off the House Committee on Un-American Activities * * * and in other ways beefing up the Governments' power to fight the criminal Red conspiracy.

The next pitch, we'd say, is up to Congress. The object would be, not to strike the Supreme Court out (after all, we've got to have courts, including this one), but to shove it back into its own domain.

That domain is the field of interpretation of laws, whereas this Court has time and again bulged over into Congress' field of making laws.

Congress, we believe, should have acted long ago to beat back these invasions of its territory. It came within an ace of doing so last year, but was stopped by its liberals with the aid of the curious Senator LYNDON B. JOHNSON, Democrat, of Texas.

Now that the Warren court has been indicted, so to speak, by a grand jury of State supreme court justices and by another grand jury of eminent and responsible lawyers, what excuse can there be for Congress' putting off appropriate action any longer?

More Convenient Care for Alaskan Mental Patients Comes Through Efforts of Oregon's Congresswoman Edith Green

EXTENSION OF REMARKS
OF
HON. CHARLES O. PORTER
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Monday, March 2, 1959

Mr. PORTER. Mr. Speaker, an outstanding role in providing more convenient care for mental patients in Alaska was played by Congresswoman EDITH GREEN of Oregon. She worked actively to change the existing program whereby the mentally ill of the then Territory had to be sent thousands of miles away from family and friends to a private hospital in Oregon.

Today a new State hospital is being constructed in Alaska. The patients will go there.

EDITH GREEN and others who worked for this logical improvement were condemned by unthinking people, but their humanitarian efforts were not silenced. The picture today is vastly improved.

It is my privilege, under the leave to extend my remarks in the RECORD, to include an editorial from Labor entitled "Her Courage Paid Off," which comments on this matter. Labor has given deserved written tribute to my friend and senior colleague from Oregon:

HER COURAGE PAID OFF

It's worth while to recall a courageous battle fought by Congresswoman EDITH GREEN, Democrat, of Oregon, and to report the outcome. The story is as follows:

Several years ago, Mrs. GREEN pointed out to the House that there was not a single mental hospital in Alaska to serve its people. They had to send their mentally ill loved ones thousands of miles away to a private hospital in Oregon, which had a contract with the Federal Government.

Moreover, under an old, outworn and cruel law, to get even this distant care an unfortunate man, woman, or child had to be "convicted" in an Alaska court, just as though he or she had committed a crime by becoming mentally ill.

A bill to modernize and humanize that law, and to establish a public hospital in Alaska, was introduced by Mrs. GREEN, though the private hospital which was profiting from the old system was in her district and much local pressure was put on her to stop her fight for the voteless Alaskans.

Also, as Labor reported at the time, a weird but powerful nationwide lobby spread vicious propaganda calling the proposed Alaska hospital, and the public land with which it would be endowed under the bill, a "New Siberia, U.S.A." to which opponents of the Eisenhower administration would be "exiled" under some dark and devious plot.

Now, to bring the story up to date: The Oregon Congresswoman continued her fight despite the odds which seemed to be piling up against her, and she finally won. The hospital she advocated is being constructed and has been taken over by the new State government of Alaska. The proprietors of the private profit hospital in Oregon are being investigated on income tax charges. The malicious propaganda campaign against Mrs. GREEN and her bill has "gone with the wind." Her courage paid off.

A Tribute to Andrija Stampar, M.D., 1888–1958

EXTENSION OF REMARKS
OF
HON. JOHN E. FOGARTY
OF RHODE ISLAND
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 11, 1959

Mr. FOGARTY. Mr. Speaker, as a congressional adviser to the U.S. delegation to the 10th World Health Assembly, which met in Geneva, Switzerland, in 1957, I had the privilege of getting to know Dr. Andrija Stampar, of Yugoslavia, who was one of the founders of the World Health Organization and who, in 1957, was still a vigorous leader in world health. I share the sense of loss that was felt by the public health professions at his death last year. We can all be grateful for his part in building an organization that provides such a splendid medium through which our medical and health leaders can work toward the common good in a spirit of friendship with their colleagues from all parts of the world.

Dr. Henry van Zile Hyde, of the Public Health Service, who worked closely with Dr. Stampar for many years, has written a tribute to him which was published in the December 1958 issue of the American Journal of Public Health. This tribute gives us a picture of an unusual man who contributed greatly to public health in his own country and in the world at large. Mr. Speaker, under leave to extend my remarks, I include the article by Dr. Hyde entitled "A Tribute to Andrija Stampar, M.D.":

A TRIBUTE TO ANDRIJA STAMPAR, M.D., 1888–1958

(By Henry van Zile Hyde, M.D., F.A.P.H.A.)

It was the spring of 1946, the third day of the session of the Technical Preparatory Committee of the World Health Organization at the Palais d'Orsay Hotel in Paris. Down the long corridors stomped a broad-shouldered storm cloud with a rounded head. As he approached us, standing outside the door of the gilded room serving as the secretariat office, he broke into a staccato outburst of expressive English, unembroidered by articles and connectives. His wrath was justified. It had taken him 7 days to traverse the distance from Zagreb to Paris, with interminable interruptions in unexpected and inconvenient places for inspection of his documentation. It was postwar Europe.

Thus, some of us met Andrija Stampar, a man whose name we had known and whose force we had already felt, the man known to

many in a seriocomic vein as the Bear of the Balkans. It was to be our privilege to know him and work with him for the next 12 years. His death is a personal loss and a loss to public health, for he was indeed one of the great men of our profession.

Andrija Stampar—as he unfolded his tale bit by bit over the years—was the son of an itinerant pedagog in Croatia, itinerant not because he loved to wander but because of his liberalism. Soon, in any village, he would test the mettle of the conservatives with his views on life and society, and would in due course be asked to leave forthwith. Packing wife and worldly goods into a donkey cart with children trailing along, he would move to another village where his expanding reputation had not yet penetrated. In due course, the story repeated itself. I learned this from Andrija Stampar, one of the boys who trudged behind—only to march forward in later life proclaiming on a world stage the liberalism learned in such a hard school.

In the course of this tenuous existence, one dear lady recognized the potentialities latent in her son's playmate and took Andrija under her wing. In due course she made it possible for him to go to Vienna for an education. He told me once of this trek. His mother provided him with a ham to sustain him on his long walk north. On arrival in Vienna, the young, lone wanderer found a boardinghouse and moved in. Very shortly a crisis developed. He had finished his ham bone and disposed of it in that new wonder—new to him, that is—the inside flush toilet. He said, and doubtless quite rightly, that the result was catastrophic for the plumbing and led to altercations with his new-found hosts. Thus began the education of a great sanitarian.

On his return to Yugoslavia, he rejoined his family, now in better circumstances. His education had been intensive and he was an intense man. And he was profoundly shy. When his sister had friends visiting her, he would repair to his room and lose himself in his books. On one occasion his sister created a crisis by inviting a friend to spend the weekend with her. Before dinner she went to her brother's room and told him that he must make an appearance and must also join in the family activities throughout the weekend. There was no escape for Andrija. So, having combed his hair well and dressed appropriately for the ordeal, he went to the living room, stood in the door, and surveyed the group. His eyes lit upon his sister's friend across the room; he stood transfixed, and then pointing at her blurted out, "I'm going to marry you." During the succeeding months he trudged over the fields in the moonlight to sit enraptured outside her house, eventually gathering sufficient courage to call upon her. In due course, yes, he married her. The clarity of vision, the decisiveness, and, indeed, the shyness persisted through the years as hallmarks of his character and personality.

This doctor of medicine became progressively a doctor of public health, but never lost touch with the science of medicine. When his country, Yugoslavia, was created at Versailles, he became its first director of health. Perhaps it would be more accurate to say that in this new country, new and amorphous, he gave leadership to the development of what became its public health service. It was characterized by quality, breadth of coverage, and the spirit of service. It reflected the intensity and the quality of the man himself and soon became a model health service on which the eyes of the world were focused through the League of Nations, which he was called to serve for 6 years, from 1931 to 1937. Later, his influence spread through his activity as a teacher, as visiting professor of public health at the University of California, and as professor and later rector of the University of Zagreb.

Then came the collapse and destruction of World War II. He was captured when the Germans moved into Zagreb. Again he had a story to tell. He was at first imprisoned in his hometown. His first wife had died some years before and he had married a lovely, gracious physician who had been a member of his public health staff. He liked to tell, jokingly, that he had married her because she brought so many problems to him that he decided the best solution was to take her out of public health. This was his shy way of covering up with a jest one of the tenderest and most delightful marriages it has ever been my joy to witness. But to get back to the prison story, Mrs. Stampar nightly made rounds of the prison walls hoping to catch a glimpse of her husbands at one of the windows. Night after night she did this with no luck. One night she noted a cluster of women standing in front of the great main gate. It appeared that they were to be admitted into the prison for some reason that was not apparent. She took a chance and joined the group. In due course, the German prison guard threw wide the huge iron gates and waved the group of women in. They were then conducted in a direction which Mrs. Stampar, as a physician who had attended patients in the prison on occasion, recognized as the route to the clinic. Then it suddenly struck her that she was in the midst of a group of prostitutes headed for inspection. On arrival at the clinic, she was recognized by the physician in charge, a Zagreb colleague. He beckoned her aside and ushered her into a side room without comment. He then summoned Dr. Stampar to report to the clinic and ushered him into the same room. Every night thereafter Mrs. Stampar visited her husband until he was whisked away into a prison in Austria. When she next saw him, she did not recognize him. An emaciated shadow of himself, he walked unheralded and unrecognized up the sidewalk to the porch of his home, where the family was sitting.

Andrija Stampar recuperated quickly from his grim years in prison, and emerged rapidly into world leadership. When he appeared in Paris on that day in 1946, he was not just the competent health expert of Yugoslavia, he was also vice president of the Economic and Social Council of the newly formed United Nations. It was under his acting chairmanship of that council, in fact, that the Technical Preparatory Committee for the World Health Organization had been organized and convened. He was again a world leader. During the weeks in Paris, those of us who worked with him soon overcame our trepidation and found that the bear of the Balkans was a very friendly bruin indeed—a friend of all mankind.

The next time that many of us saw Dr. Stampar was at the International Health Conference in New York a few months later when the constitution of the World Health Organization was drawn up and adopted. He called that unique conference of Nations to order, turning the gravel over to Dr. Thomas Parran when the latter was elected its president. Stampar continued to take a leading role in the conference as chairman of the Yugoslav delegation and a member of the steering committee. His prestige, the force of his personality, and the general aura of wisdom that surrounded him made him one of its most effective participants. Probably his major contribution to the constitution of the World Health Organization, as one looks back on the Paris and New York meetings that developed it, was the broad vision incorporated in its oft-quoted preamble.

At New York an Interim Commission of 18 nations was established and Stampar was elected its chairman, presiding over the commission at its meetings, which took place quarterly during the succeeding two years. This was not an easy task. There were knotty, emotionally charged problems to be decided that would shape the long future of the World Health Organization. Divisive forces were at work. Cultural backgrounds varied widely. Experience in international cooperation was limited, but faith and hope were high. Disparate basic objectives split East and West. There was great imbalance in national strength, both technical, and financial. Different interpretations, even of the workings of the democratic process, intruded themselves. The validity of the vote, which we accept so instinctively as a useful and welcome device to settle controversial points, was even open to question.

Over this complex situation Stampar presided with skill, charm, and effectiveness, becoming, as Time magazine once pointed out, a crusader for unanimity. The decisions taken during the two years of the life of the Interim Commission brought organization into the disordered international health scene, fused existing agencies into the new structure, launched new programs, and set the pattern for even bigger things in the WHO itself.

Then in 1948 came at last the First World Health Assembly—commemorated this year on its 10th anniversary—at which the road had to be laid out for the long future of the WHO. Basic decisions on organizational structure, administration, budget, program had to be made. There was a tussle over the question whether the organization should be a technical one providing technical services, or a supply organization on the pattern of UNRRA. There were other questions that would determine the very nature of this new world enterprise. Over all this Andrija Stampar presided.

Stampar sat high on the podium of the great Assembly Hall of the Palais des Nations, known to diplomats and sightseers the world over, at the moment of greatest crisis in the affairs of WHO. In accepting the WHO constitution, the United States had reserved the right to withdraw. In the nature of things diplomatic, it is necessary that all parties to an international agreement accept any reservation made by a ratifying nation. Normally this is done through the long, slow, and cumbersome methods of age-old diplomacy. In this case, however, the Secretary General of the United Nations, with whom the treaty had been deposited, rules he would accept the U.S. ratification as valid if the Assembly, representative of the full membership of WHO, made a unanimous request that he do so. Here was a great moment in the life of WHO. Would any single nation oppose U.S. membership? The members of the Soviet bloc, no longer allies of the West, were in the Assembly Hall, duly accredited. A Yugoslav was in the chair. It was June, 1948, and within days Yugoslavia was to be unceremoniously booted out of the Cominform. Things were tense among nations. Friends of the United States moved to the rostrum, expressing confidence, praise, and support. Then the vice minister of health of the Soviet Union took the rostrum. Tension filled the hall and Stampar's grim visage reflected the mood of all who wondered and feared at this moment of crisis for the future of that which had been so carefully constructed for the welfare of all mankind. In the Palais in those days there was no simultaneous translation, but we knew that Dr. Stampar understood Russian and so watched his face keenly for an answer to our fears.

As the Russian spoke with force and vigor, and at what seemed interminable length, Stampar's face remained grimly set. There was no look of hope. The Russian, as we discovered later, was giving no quarter but was criticizing the United States for talking of death at a time of birth. Then—a final

sentence, and a beam of joy erupted on Stampar's face, telling all of us electrically that the Soviet Union had supported the admission of the United States to the World Health Organization. Our Russian colleague had grudgingly stated that, despite our bad behavior, we were perforce essential to the WHO. It was this message that Stampar transmitted to us and to the delegations throughout that great assembly hall without a spoken word. Throughout his life he had had many tense moments, many moments of doubt and fear, yet one can believe that perhaps this was his greatest moment, because it involved not only himself and his family but his great concern for the world and the people in it. And it had come out right for him and for mankind.

Stampar was a man of force and conviction. There were times when we would have been glad to skin the bear of the Balkans and hang his hide high on a tree. But there existed always the underlying affection and the deep-seated respect that made us realize that when he was not right he certainly meant to be. Our contacts with him were deep rooted in friendship and affection.

At home as well as abroad Stampar continued as a leader to the moment of his final illness and death. He had worked effectively under the monarchy and under the Tito regime. No one seemed quite to know his politics because perhaps his politics were only people and their needs. His country and his colleagues recognized his worth and his greatness, signalizing it by electing him president of the Yugoslav Academy of Science—which is one of the highest distinctions that can come to a man of his country.

Those of us who knew Andrija Stampar have been saddened to learn of his death. Untold millions who have never heard of him have lost a friend who worked for them incessantly and stubbornly, who fought for them valiantly. His name will live in the history of public health.

Hon. Daniel Alden Reed

SPEECH
OF
HON. ROBERT L. F. SIKES
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 19, 1959

Mr. SIKES. Mr. Speaker, I have had the privilege of representing the people of the Third District of Florida since my election to the 77th Congress on November 5, 1940. When I compare these few years with the years of service by the late Honorable DANIEL ALDEN REED, Representative of the 43d District of New York, I realize even more the vast storehouse of knowledge and experience of which we are deprived today.

One has only to take a glance at a biographical sketch of this outstanding servant of the people to understand the greatness of his works and the leadership which he so unselfishly gave throughout his life. His honors, his accomplishments, and his many unpublicized moments of counsel, advice, and assistance to his colleagues establish DAN REED, as he was so affectionately known, as a member of that rare group of truly outstanding leaders our country has produced.

Mr. Speaker, I join with my colleagues in expressing my sincere sympathies to the family and friends of DAN REED. At the same time, I hope that others may follow the good examples and works of DAN REED, a great leader in Congress for a period which embraced nearly one-fourth of the life of the Republic.

American Bar Association Supports House-Passed Bill To Free the Federal Payroll of Communists and Fellow Travelers

EXTENSION OF REMARKS
OF
HON. EDWARD H. REES
OF KANSAS
IN THE HOUSE OF REPRESENTATIVES
Monday, March 2, 1959

Mr. REES of Kansas. Mr. Speaker, I share the deep concern expressed by the American Bar Association in its resolution recommending prompt enactment of legislation to close loopholes in the law which permit Communists and fellow travelers in many Federal positions.

After full and complete consideration of individual rights as well as national security requirements, the American Bar Association has strongly endorsed legislation to prevent Federal employment of Communists and subversives—S. 1411—as reported by the House Post Office and Civil Service Committee and passed by an overwhelming vote in the House last year.

Unfortunately, this urgently needed legislation was not acted on by the other body when we could not obtain conference agreement on the House-passed bill.

I agree wholeheartedly with the action of the American Bar Association in thus squarely endorsing the action taken last year by the House of Representatives. The resolution once more confirms the determination made by this House, that a security system for Federal employment, to be really effective, should be spelled out clearly in the law rather than left to the whims and caprices of administrative officials.

As far back as 1946 I secured the adoption of a resolution to investigate reports of malfunctioning of the Federal employees' loyalty program. Investigation disclosed extreme laxity in certain parts of the executive branch concerning infiltration of subversive elements. Based on these findings, a Federal employees' loyalty program was established—but soon proved inadequate because not based on law. The House of Representatives in 1948 approved my bill to establish an effective loyalty program, but there again the other body did not act. Finally, the House passed a bill in the 81st Congress which was approved by the other body and became Public Law 733, providing for summary removal of Federal employees whose actions jeopardize national security.

Public Law 733 was seriously weakened, as a measure to protect national security, by the Supreme Court decision in Cole against Young. The Court decision invalidated a portion of the Executive order on securities issued in 1953 and thereby opened the door for many known security risks to force their way back on the Federal payroll. Also, under this and later decisions, the Government has been required to give over $450,000 in back pay to persons who had been removed from Federal positions as security risks. This came about, not because these persons are not security risks but solely because of the technicality that their positions had not been specifically designated as "sensitive."

The real issue is simply this: Should any individual who is a Communist, fellow traveler, or subversive hold any public office or position in the Government of the United States? The American Bar Association now has joined with the House of Representatives in answering "No." After full deliberation, and with proper consideration of the protection of individual rights in the light of the national interest, they strongly urge enactment of Federal employees' security legislation approved by the House last year.

Mr. Speaker, I believe I can assure the Members that one of the first bills to be brought to the floor by the Post Office and Civil Service Committee in this session will be the bill to close existing loopholes and provide a permanent, fair, and effective security program for Federal employment. These are the major provisions of such legislation:

First. The head of any department or agency may suspend any employee when deemed necessary in the interest of national security.

Second. Within 30 days, after such suspension, the emplioyee shall have an opportunity to reply.

Third. After complete review of investigation the department or agency head may separate the employee if he determines it necessary in the interest of national security.

Fourth. The suspended employee is entitled to a written statement of charges, reasonable opportunity to answer, a hearing, review by the department head, and a written decision.

Fifth. The term "national security" means all Government activities of the United States involving national safety and security, and every Government employee is deemed to be engaged in an activity involving national security.

Sixth. Any reinstated employee shall be paid for time improperly off the payroll in an amount not to exceed the amount he would have earned had he not been separated, less any earnings during the separation.

Seventh. Procedures under the Lloyd-Lafollette Act of 1912 or the Veterans Preference Act of 1944, as applicable, must be followed in any suspension or separation, to the extent consistent with national security.

Eighth. Any employee separated under the security provisions is entitled to appeal to the Civil Service Commission for complete review and the Commission's decision is final and must be followed by the department or agency.

This legislation, as was the case with S. 1411 last year, reaffirms the intent of

Public Law 733 as enacted by the 81st Congress. It gives every proper measure of protection to the loyal employee, and at the same time will help keep the Federal payroll clear of Communists and fellow travelers. It will place in effect most of the recommendations of the Wright Commission on Federal employees' security. This Commission, appointed by the President several years ago, submitted a report of nearly 1,000 pages and recommended even stronger Federal employees' security legislation. Mr. Wright, chairman of the Commission, in testimony before our committee, endorsed this legislation and added:

It is a tragedy, indeed, that we need any loyalty or security programs, and I fervently hope that the day will hasten when we can abolish them. Until that day, however, we dare not forget that the threat is not only real but formidable.

The discerning and forthright resolution of the American Bar Association is in the highest public service tradition of this great professional association. Its report and resolution are of great value in bringing to public attention the crucial importance of early legislation providing the means to deal permanently and effectively with the problem of subversive infiltration in our more than 2 million Federal positions. I commend this report and resolution to the attention of all Members of the 86th Congress.

Freedom

EXTENSION OF REMARKS
OF
HON. EUGENE SILER
OF KENTUCKY
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 17, 1959

Mr. SILER. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I would like to insert an article on the subject of "Freedom," eloquently written by Mr. George W. Schroeder, editor of the Southern Baptist Brotherhood Journal, and as this article appeared in the quarterly issue of April 1959 of that publication. Mr. Schroeder is one of the great religious leaders among Southern Baptists and he is certainly interested in the future welfare of our country and in the preservation of its freedom at all times. The article is as follows:

FREEDOM

(By George W. Schroeder)

Freedom—what a glorious word. It vibrates with all that man values in this world in which he lives. Embodied in it are all the basic elements that give life purpose and meaning. With it, and if properly used, man can achieve new heights—prove his worth. Without it, man loses his individuality. Truthfully, freedom is something man does not fully appreciate until it is lost. Then, having lost it, he will give his very life to once again attain it.

We who live in the United States have been given the priceless heritage of freedom. Because of the concern, convictions, and determination of our forefathers, we have been endowed with a way of life that enables us to be free men in a free society, a goal toward which many nations of people strive but few attain.

Consider, however, the kind of a nation of people we would be if we were deprived of the freedoms we are privileged to enjoy. What if those in high office took from us the rights of freedom of assemblage, worship, speech, press, the ballot, fair trial, and pursuit of happiness? If we were deprived of such freedoms overnight, then undoubtedly this Nation would quickly be in civil war. Yet, and understandably so, those who would seek to destroy such freedoms within our Nation would be foolish to endeavor to take from us such cherished possessions overnight. Rather, their strategy would be to take small privileges from us constantly, striving continually to the end of complete domination. Such procedure would achieve selfish ends without being conspicuous.

The time has come in our Nation's history when every thinking individual needs to look about him to see what is happening in this matter of freedom. Slowly but surely many of our basic freedoms are being taken from us. At the time they seem to be small freedoms without deep significance. Yet, an analysis will show that embodied in these deprived rights are the very taproots that can ultimately take from us all our basic freedoms. If one doubts the truth of this statement let him look, if no further, at least into the matter of what is happening in this Nation concerning freedom of the press, freedom of speech, freedom of worship, all of which are involved in the matter of separation of church and state. If one will honestly seek to analyze the meaning behind some of the events that have come to pass in these areas, he will become alarmed with what has been done and what can be the ultimate end if such a pattern is not checked immediately.

The writer is not an alarmist. He does, however, believe that he is a realist. As such, he suggests that we take a deep look at our freedoms in this Nation, and then silently but determinedly resolve that under God we are going to preserve our basic freedoms to the end that we may pass on to those who follow this glorious heritage of being a free man in a free society.

Columbus Day

EXTENSION OF REMARKS
OF
HON. PETER W. RODINO, JR.
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Monday, March 2, 1959

Mr. RODINO. Mr. Speaker, for many years there has arisen, from time to time, a movement to make October 12, Columbus Day, a national holiday. It is true that nearly all the States today observe it in one form or another, either as a legal or a public holiday. My purpose, however, in introducing this bill is to make October 12 a truly national holiday, sponsored by the Federal Government. There has, properly speaking, been but one occasion when Congress has purported to declare a national holiday throughout the United States, and that was by the act of March 2, 1889, which used the expression with reference to the following April 30, the "Centennial Anniversary of the Inauguration of the First President of the United States."

I submit that it is time to break the precedent again and the purpose of this bill—H.R. 418—is to declare October 12 a permanent national holiday. No anniversary, surely, could be more basic nor fundamental than that which marks that day in the year 1492 when the eyes of Christopher Columbus first beheld an outpost of the New World. Although he did not know it was a new world, believing it to be merely the western Indies, and died in that belief, it was nonetheless the faith and persistence of this one man, in the face of almost inconceivable obstacles and heartbreaking humiliation and delay, which threw open a new hemisphere for the settlement of mankind and the eventual emergence of a great republic founded on democracy and dedicated to the proposition that all men are created equal.

Surely this epochal day merits a yearly observance, both in tribute to the man himself and to an event which forever changed the face of the earth and altered the destiny of the human race.

Investigations Stymied

EXTENSION OF REMARKS
OF
HON. OVERTON BROOKS
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Monday, February 2, 1959

Mr. BROOKS of Louisiana. Mr. Speaker, under leave to extend my remarks, I wish to call attention to a very timely and aptly worded editorial which appeared in the Shreveport Journal, Shreveport, La., under date of February 26, 1957:

INVESTIGATIONS STYMIED

"I decline to answer on the grounds my answer may tend to incriminate me" might well be the death sentence of congressional investigating committee.

Recent months have seen virtually every witness summoned before legislative committees looking into such vitally important topics as Teamster gangsterism, coin machine industry terrorism by organized hoodlums—and various other examples of the invasion of many areas of the economy by the most vicious thugs, leeches, and racketeers—hide his record under the Bill of Rights, and with complete immunity.

In over-zealous efforts to protect the rights of the individual, Federal courts have almost unanimously thrown out contempt citations against recalcitrant congressional witnesses. Desipte the fact that many witnesses refuse to answer any of as many as 50 questions (including "What is your name?") on the grounds of possible incrimination—and with the obvious intention of using the fifth amendment to the Constitution solely as a means of refusing to testify—the courts refuse to honor congressional contempt citations against them.

The record for the past 9 years is sufficient to cause lawmakers to wonder just what authority they have remaining to force witnesses to testify. Since 1950, of all the witnesses cited for contempt by Congress, 78 were indicted, 28 convicted, 15 of these convictions were reversed, 9 are pending on appeal, 2 were fined, and 2 served jail sentences. Those two who managed to slip by the courts into jail served only 90 days each.

Constitutional guarantees formerly were invoked by witnesses only as a last resort, and then only for a particularly incriminat-

ing question. Now witnesses will not even answer a question about the weather, except to say, "I decline to answer, etc."

Congress might as well save its time and the taxpayers' money in its racket investigations. Shorn of the strong weapon of contempt of Congress by the courts, congressional investigators are virtually powerless to force revelation of underworld tactics.

The Federal Law of Conspiracy

EXTENSION OF REMARKS
OF

HON. ALFRED E. SANTANGELO

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, March 2, 1959

Mr. SANTANGELO. Mr. Speaker, the law of conspiracy has had a tremendous development in our Federal courts. Public prosecutors are using it more and more to reach out to net persons accused of crime when the statute barring prosecution has long since passed and also to bring into the trial hearsay testimony which even though uncorroborated is sufficient to convict the accused.

Bar associations and practitioners of criminal law are complaining today as to the use of the law of conspiracy in our Federal courts. They feel that lawyers, bar associations, and people interested in civil and individual liberties should be alerted to the dangers inherent in the present rules governing trials of conspiracy indictments.

One of the outstanding members of the New York Bar, with extensive experience in defending the many accused in Federal courts, has made a keen analysis of the outstanding cases of the law of conspiracy, its dangers, and its unfair application. I believe that people interested in individual liberties and in the maintenance of fair trials will find an article entitled "The Federal Law of Conspiracy" to be of inestimable value and of great interest.

The following is an article written on the Federal law of conspiracy by Menahem Stim, a member of the New York Bar:

THE FEDERAL LAW OF CONSPIRACY

(By Menahem Stim, member of the New York Bar)

The practitioner in the criminal parts of the Federal district courts, when defending a client charged with a violation of a Federal criminal statute, is generally confronted with an indictment which invariably contains in addition to the count charging the substantive offense, a separate count charging a conspiracy to commit the substantive offense.

The usual inclusion of a conspiracy count in Federal indictments makes the defense of persons charged with Federal criminal violations a very difficult task indeed. Difficult as it is to defend one accused in a Federal criminal court of a substantive offense only, because of the Federal rule, which unlike the State rule, permits a conviction based solely on the uncorroborated testimony of an accomplice (see *Poliafico* v. *U.S.*, 237 F. 2d 97, certiorari denied 77 S. Ct. 590, 352 U.S. 1025, 1 L. ed. 2d 597, rehearing denied, 77 S. Ct. 718, 353 U.S. 931, 1 L. ed. 2d 725) such a task becomes almost hopeless, when the indictment contains the usual count charging the defendant, in addition to the substantive offense, with a conspiracy to commit the substantive offense.

The prosecution then has the unfair advantage because of the peculiar Federal law of conspiracy, which permits the introduction of clearly hearsay evidence admitted subject to connection, thus in effect permitting the jury to hear hearsay evidence which while ostensibly offered only in support of the conspiracy charge, in practice is used to support a jury's finding of guilt on the substantive charge as well. While the trial courts invariably admonish the juries and point out to them the limitation on the admissibility of this type of evidence, it is a known fact that it would require an extremely intelligent jury to sift and separate the evidence which is hearsay under all circumstances as to the substantive charge but which on the theory that it was connected by other evidence becomes competent as to the conspiracy charge. The result of this practice of combining a substantive charge in an indictment with a count charging conspiracy is generally responsible for many verdicts of guilty based primarily on evidence, which even under the broad Federal rules as to the admission of uncorroborated accomplice testimony, could not have been admitted if the indictment contained a substantive charge only. Is it any wonder that statistics issued by the Attorney General of the United States showing a percentage of convictions of nearly 90 in all criminal cases tried in Federal courts, read like election returns from one-party countries?

Let us consider the Federal statute which defines a conspiracy and provides punishment for a violation thereof. Section 371 of chapter 19 of title 18 of United States Code, annotated, reads as follows:

"If two or more persons conspire either to commit any offense against the United States or any agent thereof in any manner or for any purpose, and one or more of such persons do any act to affect the object of the conspiracy, each shall be fined not more than $10,000 or imprisoned not more than 5 years or both. If, however, the offense, the commission of which is the object of the conspiracy, is a misdemeanor only, the punishment for such conspiracy shall not exceed the maximum punishment provided for such misdemeanor, June 25, 1948, c. 645, 62 Stat. 701."

The general conspiracy statute as quoted in section 371, supra, embraces every type of Federal criminal conspiracy except certain specific conspiracies covered by special statutes and relating to specific offenses such as a conspiracy to: cast away or destroy a vessel (sec. 2271, title 18); to gather defense information (sec. 794, title 18); to injure property of a foreign government (sec. 956, title 18); to kidnap (sec. 1201, title 18); and a seditious conspiracy (sec. 2384, title 18).

In order to make out a prima facie case in a conspiracy indictment, the Government must allege and prove that two or more persons conspired to commit the unlawful act. It is sufficient to name only one person as a defendant, providing another person or persons are listed as co-conspirators. The Government must also allege and prove at least one overt act by the defendant or a co-conspirator made in pursuance of the conspiracy. The overt act need not be an illegal one. It may even be an innocent act but it must be done in pursuance of the conspiracy.

To prove the conspiracy, the Government is permitted under the very broad rules of evidence as applicable to proof of a conspiracy, to introduce testimony by witnesses to conversations or acts by one or more of the conspirators (who need not necessarily be named as defendants) had or done not in the presence of or with the knowledge of the defendant or defendants named in the indictment. This testimony, which under ordinary rules of evidence would be inadmissible in a trial of an indictment containing substantive charge only is nevertheless admissible "subject to connection"' in the trial of an indictment which in addition to the substantive charge contains also a count charging a conspiracy, although such admission is received presumably only in support of the conspiracy charge alone. As long as these conversations or acts testified to occurred during the period of the conspiracy charged in the indictment and providing the particular defendant's participation in the alleged conspiracy is proven by evidence however slight of an independent nature, either circumstantial or direct, the patently hearsay evidence admitted as against a particular defendant "subject to connection" becomes binding upon him on the theory that the conversations or acts were those of agents in the unlawful combination.

Nor is there any legal bar to the introduction by the prosecution of incriminating evidence covering a period antedating a particular defendant's joining the alleged conspiracy providing such evidence covers acts or conversations by other coconspirators during the life of the conspiracy. This evidence becomes binding on the particular defendant on the theory that upon joining the conspiracy, he ratified all of the acts of the other conspirators performed in pursuance of the conspiracy although occurring prior to that defendant's joining of the conspiracy.

It is only when the conspiracy is completed, and that is generally on the date when the indictment is returned, that any evidence concerning conversations or acts by a particular defendant occurring after that date is binding on that defendant alone and cannot be admitted as against the other defendants charged with the conspiracy.

The law presumes that a conspiracy is terminated when its object is accomplished by success or is defeated by failure. The arrest of the conspirators would of course indicate the end of the conspiracy unless as the prosecution contended in *U.S.* v. *Reina, et al.*, 242 F. 2d 302, the conspiracy continued even after one of the conspirators was arrested. As to any particular defendant his participation in the conspiracy ends when he abandons the conspiracy and when he does so, he cannot be charged with any acts of the other conspirators occurring after his abandonment of the conspiracy. But again it is almost impossible for such a defendant to prove the abandonment, as the law requires an affirmative act on the part of the defendant claiming that he disassociated himself from the conspiracy at a certain time.

The conspiracy law became a potent factor in the prosecution of Federal crimes. It can be said without any fear of contradiction, at least as far as observed by the author's experience of almost 30 years of practice in the local Federal courts, that the vast majority of the Federal indictments in the southern and eastern districts of New York contain conspiracy charges in addition to the substantive offenses charged and were successfully prosecuted primarily because of the inclusion of conspiracy charges in the indictments.

The appellate courts generally affirm such convictions. As long as the record shows the necessary minimum evidence legally sufficient to sustain the conviction unaffected by error, the conviction is affirmed. The appellate courts were and still are influenced by the Federal harmless-error statute (sec. 269 of the Judicial Code, 28 U.S.C. sec. 391). The general policy of these courts is that a Federal appellate court under the harmless-error statute should permit a judgment to stand notwithstanding error where the court is satisfied that the error did not influence the jury or had but very slight effect on it, except perhaps where the departure is from a constitutional norm or a specific command of Congress. As the Supreme Court said in

Kotteakos v. *United States*, 328 U.S. 750 at p. 763:

"Thus it is not the appellate court's function to determine guilt or innocence * * * nor is it to speculate upon probable reconviction and decide according to how the speculation comes out. Appellate judges cannot escape such impressions. But they may not make them sole criteria for reversal or affirmance. Those judgments are exclusively for the jury, given always the necessary minimum evidence legally sufficient to sustain the conviction unaffected by the error." See also *Weiler* v. *U.S.*, 323 U.S. at 611, 89 L. ed. 499, 65 S. Ct. 548; *Bollenbach* v. *U.S.*, 326 U.S. 607, 612, 613, ante 350, 354, 355, 66 S. Ct. 402.

Lately, however, the Federal appellate courts, while still adhering to the doctrine of the harmless-error statute, have begun to scrutinize the conspiracy convictions more carefully as they begin to realize that justice is not always done in these cases, especially when under the guise of the conspiracy law and the wide latitude permitted in the offer of proof, that this law gives to prosecutors, indictments are being returned against numerous defendants grouped together in one overall conspiracy, because of the possibility, if not certainty, that juries will sweep all into the conspiracy charged because of their association with each other, especially when a proper climate is created through wide newspaper publicity prior to the trials. That was especially true in cases where the defendants were accused of a conspiracy to violate the Smith Act and is now true in indictments charging a conspiracy to violate the Federal narcotic laws. Whether we care to admit it or not, guilt by association plays an important part in jury verdicts in cases of this type.

This tendency by ambitious and overzealous Federal prosecutors to use the conspiracy law to bring about mass trials, where numerous defendants are charged with one overall conspiracy although the proof at the trial shows several distinct and not related conspiracies was condemned by the Supreme Court of the United States as early as 1946 in the leading case of *Kotteakos* v. *U.S.*, cited, supra.

In that case 32 persons were named in the indictment. Only 19 defendants were brought to trial and 13 were submitted to the jury. The jury convicted 7, acquitted 2, and disagreed as to 4. The only question raised before the Supreme Court was whether the petitioner-defendants suffered substantial prejudice from being convicted on a single general conspiracy by evidence which the Government admitted proved not one conspiracy but some eight or more different ones of the same sort, executed through a common key figure, one Simon Brown.

The United States Circuit Court of Appeals for the Second Circuit affirmed the Judgments of the District Court of the United States for the Eastern District of New York (151 F. 2d 170). The court of appeals conceded that the trial judge "was plainly wrong in supposing that upon the evidence there could be a single conspiracy; and in the view which he took of the law, he should have dismissed the indictment" (151 F. 2d at 172) but it nevertheless affirmed the conviction, saying among other things, that "especially since guilt was so manifest, it was 'proper' to join the conspiracies, and to reverse the conviction would be a miscarriage of justice." The Supreme Court granted certiorari "because of the importance of the question for the administration of criminal justice in the Federal Courts" (326 U.S. 711, ante 420, 68 S. Ct. 169).

In reversing the conviction (328 U.S. 750–780, the Court by Mr. Justice Rutledge said inter alia:

"There are times when of necessity, because of the nature and scope of the particular federation, large numbers of persons taking part must be tried together or perhaps not at all, at any rate as respects some. When many conspire, they invite mass trial by their conduct. Even so, the proceedings are exceptional to our tradition and call for use of every safeguard to individualize each defendant in his relation to the mass. Wholly different is it with those who join together with only a few, though many others may be doing the same and though some of them may line up with more than one group.

"Criminal they may be, but it is not the criminality of mass conspiracy. They do not invite the mass trial by their conduct. Nor does our system tolerate it. That way lies the drift toward totalitarian institutions. True, this may be inconvenient for prosecution. But our Government is not one of mere convenience or efficiency. It, too, has a stake, with every cititzen, in his being afforded our historic individual protections, including those surrounding criminal trials. About them we dare not become careless or complacent when that fashion has become rampant over the earth."

Kotteakos while a landmark in the decisional law regarding this subject did not, however, serve any real practical purpose. The Federal prosecutors, while a little shaken up by the Supreme Court's decision, quickly disregarded the admonitions of the High Court and mass conspiracy trials in which a single overall conspiracy is charged although the proof indicates separate and distinct conspiracies and where most of the defendants are unknown to each other, are the vogue again. While lip service is being paid to the letter of the Supreme Court's decision in that trial courts, when that issue is raised by the defense, charge the juries that they must find as a fact that a single conspiracy, as charged in the indictment exists, before they can convict, the spirit of the decision is not really being observed. Juries, in the opinion of the author, are not competent or capable to pass upon the intricate question of what is or is not a single or a multiple conspiracy. This issue should have been left to the trial courts to decide as a matter of law. Unfortunately, the Supreme Court, by its decision, made this issue a question of fact to be decided by the jury on a proper charge by the trial court.

The appellate courts are, however, beginning to take notice of conspiracy convictions based on the patently hearsay evidence of declarations of other conspirators, not made in the presence of the appellant-defenders, but admitted "subject to connection." Another phase of conspiracy convictions which does not meet with approval of the Federal appellate courts is the one based on prosecutors' tendency to spell out a conspiracy merely by the act of an attempted substantive offense, thus enabling the prosecutor to avail himself of the latitude allowed by the conspiracy law to bring about a conviction of what is essentially a substantive offense.

In *U.S.* v. *Reina et al.*, 242 F. 2d 302, decided March 19, 1957, the court of appeals of this circuit reversed a conviction of the defendant, Valachi, one of the several defendants on trial, who had been convicted in the district court of the crime of conspiracy to import, sell, etc., narcotics. While the court of appeals based its main reason for reversal on the ground that the statute of limitations had run as to the appellant Valachi, the court stated in its opinion at page 306 as follows:

"The only 'overt acts' after that date that the judge left to the jury, were two, one in June 1952, and the other in August 1952, and both were after the sale by Valachi to Pocoroba on July 2, 1951. Valachi was not connected with either of them. The prosecution answers that this was unnecessary, because, once it is shown that a person has become a party to a conspiracy the law presumes that he remains a party while it continues, unless he shows that he has left it. Therefore, since Valachi did not show that he had broken off his connection with Shillitani, he remained a party until after September 1, 1951, and the 'overt acts' will serve. We should accept this reasoning, if we thought that Valachi's sale of the parcel to Pocoroba was evidence that he knew it was in execution of the larger venture; that is, that he was cooperating in the series of importations that made up the conspiracy charged. His sale was indeed not inconsistent with that knowledge; but it was equally consistent, so far as we can see, with his being an independent peddler of narcotics, whom Shillitani selected as the most immediately available source of supply for Pocoroba's needs. In deciding that there was no evidence forbidding this second possibility, we may not consider any declarations of the proved conspirators, such as Orsini or Shillitani, for these were hearsay until Valachi's connection with the conspiracy was proved by other evidence. His own declaration was of course competent against him, but it was altogether equivocal as to the source of his supply. Indeed, were we to speculate, we should incline to read it as indicating that he bought at random."

In another decision by the court of appeals of this circuit rendered on February 20, 1957, in *U.S.* v. *Kee Eng et al.*, 241 F. 2d 157, the displeasure of the court of appeals with the apparent tendency by the Government prosecuting agencies to use conspiracy indictments indiscriminately because of the loose rules of evidence permissible in such types of charges, is clearly evident. That indictment involved a charge of conspiracy with others to violate, among others, section 174 of title 21, U.S.C.A. The court in reversing the conviction, stated inter alia:

"There was no agreement to advance any joint interest or for Eng to do anything more than pay money upon receipt of the heroin. The evidence had to do with an isolated transaction, a purchaser of five packages for $1,000. The facts are somewhat similar to those disclosed in *United States* v. *Koch*, 113 F. 2d 982 (2 Cir., 1940). There we held that even where a single purchase had actually been made that, without more, was insufficient evidence to connect the purchaser with the conspiracy to import and sell drugs in violation of law (see cases cited in *United States* v. *Koch*, and also *United States* v. *Di Re*, 159 F. 2d 818 (2 Cir., 1947), affirmed 332 U.S. 581 (1948)). Had Eng received the heroin and paid the money he would have been guilty of illegal possession and illegal purchase of heroin. The premature action of the customs agent apparently prevented Eng from going through with the transaction which he had discussed with Lee. In any event, what might have resulted in a simple case of purchase and possession, had the purchase been consummated, cannot be tortured into a conspiracy to import and sell because evidence of a substantive crime is lacking. * * *

"Having failed to adduce any evidence of Eng's knowledge of the conspiracy and willingness to join such a conspiracy, all the other evidence was improperly admitted."

The experience of the last decade proves that decisions by Federal appellate courts, sound and salutary as they are, do not act as a deterrent to the promiscuous use of the conspiracy law by ambitious and overzealous Federal prosecutors. The conspiracy law, involving the permissive use of patently hearsay evidence together with testimony of accomplices which need not be corroborated, is a proceeding exceptional to our traditions and is similar to a fashion of trial rampant over a great space of our globe today. Mass trials, as conspiracy trials have now become, give no safeguard to the individual and are repulsive to our sense of justice. To paraphrase the Supreme Court, "in such mass trials lies the drift towards totalitarian institutions."

The present rules of evidence permitted in conspiracy trials which allow convictions based entirely on the uncorroborated testimony of accomplices, make justice a mockery. In a recent trial involving 19 defendants had in the District Court for the Southern District of New York, the principal if not sole witness for the Government was an individual, named as coconspirator, whose criminal record extended for most of his adult life and included such crimes as desertion in time of war to peddling narcotics. The trial evidence developed while this witness was working with the Government, he actually engaged in sales of narcotics apparently in the belief that his association with Government agencies gave him the right to violate the law. Yet on that witness' uncorroborated evidence, proven on cross-examination to be inaccurate in many respects, a jury convicted.

It is the duty of our bar associations, together with the members of the Federal bench, to alert Congress to the dangers to our individual liberties, inherent in the present rules governing trials of conspiracy indictments. We must make every effort to bring about a change in these rules, more consonant with our ideas of justice and our dignity as a people governed by just laws. To that task we the members of the bar charged with the duty to defend causes, no matter how unpopular, must dedicate ourselves.

The Federal Budget

EXTENSION OF REMARKS
OF
HON. LESLIE C. ARENDS
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Monday, March 2, 1959

Mr. ARENDS. Mr. Speaker, there being no legislation scheduled for floor action, I spent most of last week in my district in Illinois. This gave me opportunity to talk with many, many people. The one thing uppermost in their minds and of grave concern to them as to our domestic problems is our Federal budget. They repeatedly emphasize how important it is that we do not enter upon a spending spree and that we keep the budget balanced. The people are deeply concerned about the extravagant spending bills that have been proposed.

The following editorial, entitled "Twenty-eight Billion New Spending Offered," which appeared in the Daily Pantagraph of Bloomington, Ill., on February 25, expresses, I am convinced, the thinking of the people I am privileged to represent."

TWENTY-EIGHT BILLION NEW SPENDING OFFERED

Advocates of spending are rushing ahead with bill after bill in Congress despite the need for a balanced budget and a stabilized dollar.

David Lawrence in his column on this page February 24 cited the delays in industrial plant expansion, the difficulties of Treasury financing, the flight from fixed investments and the general threat to our economic security.

A balanced budget would do more than anything else to correct this dangerous situation. Yet what do we see taking place in the Democratic majority in Congress?

For example, Senator PAUL H. DOUGLAS has introduced S. 722 calling for expenditure of $380 million in area development. Senator MIKE MONRONEY, of Oklahoma, has offered S. 1 an airport construction bill, for $575 million.

Senator DENNIS CHAVEZ of New Mexico, has introduced a public works bill with a $2 billion price tag: Senator JOHN SPARKMAN, of Alabama has offered a housing bill, S. 57, which would cost $2.5 billion over 6 years.

Senator JOHN KENNEDY, of Massachusetts, and Senator JOSEPH CLARK, of Pennsylvania, are cosponsoring a bill providing urban renewal grants of $6 billion over a 10-year period. Senator JAMES MURRAY and Representative LEE METCALF have offered a Federal school construction bill, S. 2, which would cost $11.4 billion in 4 years.

Representative THADDEUS MACHROWICZ, of Michigan, has offered a public works bill in the House calling for expenditure of $3 billion. Representative EARL HOGAN, of Indiana is author of H.R. 102, which would give pensions to World War I veterans at a cost of $2.25 billion.

This totals about $28 billion in spending, most of which apparently would have to be deficit financed since no additional taxes have been proposed to cover the cost of these projects.

The President has proposed some projects in many of these areas but calling for smaller amounts.

Some Democratic leaders are trying to counter President Eisenhower's charge of "spenders" by proposing some cuts in foreign aid. The President only asked for $3.93 billion. If they were to cut it all out they still couldn't make a dent in the huge deficit they are proposing.

Of course foreign aid projects should be examined carefully before being cut at all. This is part of our cold war against Russia. It would be futile to spend billions on arms at home unless we also help underdeveloped countries to improve their standards of living without being subverted by the Communists.

The approach being made by individual Democrats in the current Congress represents irresponsibility unworthy of a major political party in a time of crisis. We urge the responsible party leaderships and the citizens at large to place country above selfish interest and curb this unwarranted deficit spending.

Those who propose new projects should have the courage to propose new taxes as well to cover the cost.

Hon. Sid Simpson

SPEECH
OF
HON. PAUL B. DAGUE
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 26, 1959

Mr. DAGUE. Mr. Speaker, it is with immeasurable sadness that we return to the contemplation of the untimely passing of our esteemed friend and colleague who left this life at the very peak of his career and at a time when his contributions to his State and the Nation had reached impressive proportions.

It was my great privilege to sit at his side on the Committee on Agriculture and it was a rich experience to have the benefit of his down-to-earth philosophy which was always permeated with a compelling sense of humor. In the day-to-day interchange between the members and in interrogating witnesses he displayed a firm grasp of the economics of our farm problem but never pressed his views to the point where he departed from those gentlemanly characteristics which were the hallmark of his legislative career.

This path we tread is all too short and we are made better when in the course of our journey we are permitted to travel in company with a generous, lighthearted companion such as was the one we mourn. We shall always cherish his memory and we shall remember in our devotions his charming wife and children who have carried on in his absence in a manner that would have delighted his soul. To them goes our heartfelt sympathy and the assurance that their loss has also been very real to those of us who have been honored to call him friend.

Junior Achievement

EXTENSION OF REMARKS
OF
HON. FLORENCE P. DWYER
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 11, 1959

Mrs. DWYER. Mr. Speaker, one of the most unusual and effective programs through which young people are given the opportunity to grow into mature young citizens is junior achievement.

As many of our colleagues are aware, junior achievement is made possible by the cooperation of public-spirited businessmen who, by means of their unselfish devotion of time, interest, and business know-how, enable young men and women between the ages of 15 and 19 to participate in actual business operations of their own.

The experience, of course, has been invaluable. The assumption of real responsibility by these young people, together with the practical knowledge achieved by handling the functions of business and finance, have added a new dimension to their educations.

Junior achievement, therefore, has proven itself an important means of finding and developing young people of exceptional ability. By providing an unusually challenging way of bringing out the best in our youth and by creating opportunities for developing a sense of responsibility and a talent for leadership, junior achievement is accomplishing a great deal in our national effort to lift standards of education and to implant in our youth the desire for excellence.

Of all the junior achievement organizations in the country, Mr. Speaker, I know of no other which has shown the imagination and displayed the productive zeal of the Union County-Carteret organization in New Jersey. For their achievements, a great deal of the credit must go to Mr. Philip C. Osterman, junior achievement president, and Mr. J. Kenneth Roden, executive vice president.

A mark of their imaginative leadership was the recent tour of Puerto Rico sponsored by Junior Achievement of Union County-Carteret. Twenty-eight

boys and girls, truly good-will ambassadors, flew to Puerto Rico to study the economy and industrial development of the Commonwealth. During their brief stay they were guests of Puerto Rican businessmen and their families. They met with government officials, including Gov. Luis Muñoz Marín, and industrial leaders and visited museums, art galleries and universities. Altogether, they obtained an invaluable inside view of the relationship between the United States and Puerto Rico in the fields of government, education, culture, agriculture, and business.

This unique junior achievement venture, Operation Puerto Rico, recalled an earlier trip to Canada, where similar valuable experience was obtained.

The 28 junior achievers who participated in the trip, together with the names of their firms, follow:

Kenneth C. Bradshaw, 136 Chilton Hall, Elizabeth, Hy-Co.

William E. Brandt, 305 Waite Avenue, Rahway, Ja-Chem.

Ray S. Ciemniecki, 607 Clinton Street, Linden, Esco Co.

Elaine A. Downey, 95 New York Avenue, Clark, Gemco.

John Erdreich, 352 McLean Place, Hillside, Hillco.

Joseph M. Gutauckis, 154 South Park Street, Elizabeth, Typco, Inc.

William J. Hornyak, 1410 Hussa Street, Linden, Scher-Craft.

Frank W. Huber, 508 Livingston Street, Elizabeth, Westjac.

Andrew K. Hughes, 1211 Prospect Avenue, Plainfield, Javid Unlimited, Inc.

Barbara A. Jacek, 228 Atlantic Street, Elizabeth, Rol-O-Lator Co.

Ronald Jarka, 24 Mary Street, Carteret, Kleenco.

Joan Kates, 29 Decker Avenue, Elizabeth, Corac.

Alexander J. Kersis, 742 Morses Mill Road, Elizabeth, Achievalite.

Donald G. Kulibas, 1300 Deerfield Terrace, Linden, Jun-A-Crest.

Robert G. Konecny, 145 Union Avenue, Linden, Traco Products Co.

Elaine J. Kratson, 227 Marshall Street, Elizabeth, Jasco.

Geraldine Krysiak, 525 Garfield Street, Linden, Gafco.

Pamela L. Newman, 702 Westfield Avenue, Elizabeth, Copper Art Products Co.

Roberta J. Nolan, 853 Washington Avenue, Linden, Jalso Products.

Janet E. Powers, 1812 Caroline Avenue, Linden, Best Co.

Janet G. Rey, 15 Dartmouth Road, Cranford, JA Pont.

Sandra J. Rosenblum, 87 Fitch Street, Carteret, Jamco.

Donald L. Stuart, 200 Vine Street, Roselle, Printco, Inc.

John D. Tohlman, 149 West Grand Street, Elizabeth, Calcraft.

Richard Toth, 552 Birchwood Road, Linden, Kismif Co.

Alexander H. Vannauker, 53 South 18th Street, Kenilworth, Ken-Co Labs.

Marilyn Walter, 1213 Summit Terrace, Linden, Dayton Co.

Arline D. Wright, 300 W. Webster Avenue, Roselle Park, Jasew.

Mr. Speaker, under leave to extend my remarks in the RECORD, I also include an editorial from the February 10 issue of the Elizabeth Daily Journal, which articulately sets forth the purpose and accomplishments of junior achievement:

TESTING JUNIOR ACHIEVEMENT

Junior achievement normally is recognized and accepted as a movement devised to inculcate business principles and the basic elements of good citizenship in young Americans in the 15-19-year range. In many areas it has adhered to and expanded in those fields. The Union County-Carteret segment of the movement has been outstanding for years and few units are better known.

Accomplishment in business in the 28 member groups is leading toward interest and participation in broader attributes of citizenship. This is consistent with the policy of the movement. Good businessmen look beyond their production and distribution areas, not necessarily or exclusively in pursuit of fresh material or more sales, but in search of sounder comprehension of their fellowmen.

Broadening of view toward other men in the far corners of our own Republic and in the distant lands overseas may boost trade incidentally, but it has other fruits. It diminishes the tensions that brew conflicts, it betters the lot of backward peoples, it lifts every nation toward finer standards in living and in thought.

The venture of the Union County-Carteret Junior Achievers in visiting Puerto Rico is a step in the pathway toward international amity directed by the sponsors. Puerto Rico is more distant in language and customs and economics than some other far places, despite its ties to the United States. Its proximity and the convenience of contact make it ideal for this experiment in studying another people, which the local Junior Achievers now are concluding.

A previous jaunt into Canada served the same end, but much of the provinces are too akin to the United States to yield the contrasts and the comparisons to be derived from the current junket. The flight to the commonwealth offered the teenagers practically all the aspects of a real trip to a far land, a strange market, another people, a different philosophy.

This is a testing of the real abilities of these boys and girls. It measures their power to learn and absorb by observation; it defines their capacity for rapid appraisal of conditions about them. They have had and benefit from cogent counseling in matters of production and distribution, but no coaching can be substituted for the exercise of their own talents in meeting and estimating their fellowmen. Their success in this computes the highest yield of junior achievement.

The Most Important Thing in the World

EXTENSION OF REMARKS
OF
HON. J. EDGAR CHENOWETH
OF COLORADO
IN THE HOUSE OF REPRESENTATIVES
Monday, March 2, 1959

Mr. CHENOWETH. Mr. Speaker, inflation is recognized as one of the greatest dangers facing this country. I wish to include in my remarks a speech delivered by Mr. William E. Carraway before the Northside Rotary Club of Colorado Springs on January 29, 1959. Mr. Carraway retired as a brigadier general in the U.S. Army in 1955 after a brilliant military career. He served in the Pentagon from 1948 to 1951 as the Chief of the Plans Branch of the Army's Budget Division. During 1950 he served as Secretary to the Program and Budget Advisers to the Joint Chiefs of Staff. From 1951 to 1953 he fought inflation in Korea as the deputy commander of the United Nations Civil Assistance Command, and as the U.S. Chairman of the Finance Committee of the Combined Economic Board, which was established to coordinate economic policies in the Republic of Korea. I am sure the Members of the House will be interested in this timely speech, which follows:

THE MOST IMPORTANT THING IN THE WORLD

Ever since serving in China from 1933 to 1936, I have believed that civilizations grow stronger and greater as long as their basic principles are simple enough to be understood and followed by the people and their leaders. When life in a country becomes so complicated that these essentials are forgotten or ignored, then that civilization begins to decline.

Whether our American civilization has begun to deteriorate in this way is debatable, but there can be no doubt at all that our Government, our very life is becoming more and more complicated. This in turn is causing the great majority of citizens, particularly political leaders, to be somewhat confused concerning the basic principles which should guide our individual and collective conduct.

Therefore, from time to time, all groups of Americans should consider what is most important to them, to their country, and to their way of life. Such analyses will assist materially in developing a proper understanding of the relative priorities of both our problems and our loyalties and will thereby prepare us to make decisions as citizens with a firm basis for putting first things first.

To all Americans, the most important thing in the world is our country, the United States of America. That we, as individuals, owe all that we are or hope to be to our country is self-evident to any open-minded person. Nothing proves this supreme loyalty more than the fact that many Americans of the past have given their lives for their country and that today this is the only cause for which the large majority of young Americans would make a similar sacrifice.

But what lies behind our country? What above all else must be guarded as the chief cornerstone of both our national health and our individual happiness?

We have many problems and programs which may from time to time appear to be most important from various points of view. Military defense, full employment, control of labor unions, education, juvenile delinquency, religion, the growing power of Government, increasing taxes, and many other related matters certainly require collective action if we as a nation are to progress in the future as we have in the past.

However, the most important things in life may not always be apparent as problems. Such is the freedom of choice with which each American makes his own character, lives where he wishes, works as he chooses, and enjoys his many rights and privileges. Even though our highly integrated economy is making it increasingly difficult for individuals to change about as they might wish, the privilege is still there and can be exercised by the overwhelming majority of citizens at any time.

But what lies at the basis of this freedom of choice? What has caused our economy to expand as it has in the past as the result of the cumulative effect of individual actions

rather than from governmental direction and control?

The one essential to our past success is the individual incentive resulting from the freedom of choice and a good sound money system. It is the dollar that causes Americans to enter upon work that pays better wages and to move to other locations where they can make better profits or get more for their earnings.

Too many Americans do not realize that there are two fundamental systems for securing the proper distribution of labor throughout the economy of a nation such as ours. These systems vary principally in the manner by which citizens are directed into various types of employment. Our system is based on payments of dollars which are increased as may be required to insure that the supply of labor in any specialty or in any area is sufficient to meet the needs of the Nation. The Communistic system substitutes force for dollars, leaves little choice to its citizens, and will always be compelled to use slave labor for the most disagreeable tasks that must be performed.

The Communists sacrifice the freedom of choice of the individual to the good of the State as dictators decide what this good may be. Accordingly, the individual citizen under communism cannot develop in breadth of character, in power of independent action, in overall worth as a man, but nevertheless the nation may be far more quickly changed to a war economy or develop missiles than is possible in a democracy such as ours. Similarly, by holding to a minimum the production of consumer goods, a Communist nation can quickly develop the funds needed to expand heavy industry and to support special programs of any kind.

The above comparative facts are fairly well known to Americans but it is much less generally known that any material loss in the attractiveness of the dollar or in the incentives or rewards encouraging freedom of choice might cause our people to refuse to move voluntarily to less rewarding or more disagreeable employment. Were this inertia to appear, national survival might require that our Nation institute conscription of labor with the attendant loss of freedom of choice concerning place and mode of labor. We would then for all practical purposes have adopted the basic principle of communism.

Sound money instead of force is accordingly the lifeblood of our American economy and of our American way of life. Money provides the basis upon which the individual develops independence of thought and character and by which the supply of labor is adjusted to changing demands throughout the Nation.

I first suspected that sound money is therefore the pinpoint of conflict between the United States and Soviet Russia in 1936, when I returned home from service in China by the Trans-Siberian Railway and stopped in Moscow for a few days. While there a young Russian was very helpful in guiding me around. Accordingly, just before leaving I asked him what I might do in return.

"Buy me some clothes in London and send them to me," was his immediate answer. Somewhat taken aback, I agreed to accept $25 in U.S. currency to purchase shoes for himself and a raincoat, a hat, and other articles for his sweetheart. But I could not understand the reasons which caused him to ask the favor.

"You will have to pay a very high duty, will you not?" I asked.

"Oh, yes," he replied. "But I can get as many rubles as I want."

I have never forgotten his reply. It still seems to present the fundamental difference between the United States and Soviet Russia, between capitalism and communism, and between democracy and totalitarianism. Has anyone ever heard an American say, "I can get as many dollars as I want?"

Americans all want money, more and more of it, with the power and the privileges which it offers, particularly the wonderful goods, services, and possessions which it provides. In America, money talks, is the objective of nearly all our labors, and is the direct means by which our economy and our lives are welded together and managed.

Under Soviet communism, however, money has been reduced to comparative insignificance. There is little to buy, distribution is closely controlled, and, on the whole, personal property is limited to articles of almost insignificant value. Position, not money, determines both power and scale of living under the Soviets. Money under communism has become a mere method of exchange and accounting.

This lack of true value of money in Russia is well illustrated by a story which Time magazine published about 1935. The first Soviet millionaire, a composer, had accumulated a million rubles, but there was nothing of consequence that he could do with his money except use a small portion for living expenses and deposit the remainder with the government. He could buy but a limited quantity of clothes and food which were rationed; he could not buy a house or a car, change his work, or set himself up in business. He could not travel, take a vacation, or even retire on his money. The Russian millionaire was therefore designated as a ward of the state which took over his fortune and allowed him only a very small amount thereof as an allowance each month.

The subordination of money is an absolute essential in a communistic nation. All power must be centralized in the hands of the nation's rulers, so that complete day-by-day control of all citizens can be exercised. Therefore, communism must outlaw completely wealth of any kind which can be saved or freely exchanged in such a way as to permit economic independence, just as personal religion, which encourages moral independence must also be eliminated.

For the primary obstacles to the spread of communism are religion, property, and money. And of these three, money may well be the most important, for when its value is lost, both religion and property will very likely go down in the wreck which follows.

In the so-called capitalist nations, particularly in the United States, money provides the means by which each individual can obtain his heart's desires, whether it be the raising of his family, buying a home or a car, quitting his job, retiring on an income, or adding to his property. The chief characteristic of the dollar accordingly is its attractiveness which is intimately bound up with what it will buy, with the large stocks of goods in the United States, the ownership of property, the freedom to travel and to change employment, and the like. Freedom rings not only from every mountainside, but from every transaction involving the American dollar.

When money loses its value in wild inflation or by other less spectacular means, confidence in government and in economic systems is gradually destroyed, stresses and strains develop between classes as changes occur in the value of their comparative economic rewards, and standards of moral conduct quickly deteriorate to an alarming degree.

Now the most interesting commentary on this situation is that the Communists, who have relegated money to a comparatively minor role, are very alert concerning its importance and seem to understand its management, while the average American citizen appears to know little concerning the importance of sound money as the fundamental principle upon which our way of life depends.

The Communists have demonstrated in many ways that they understand that the value of money must be destroyed as a prelude to the adoption of communism. The first history of the Soviet revolution which I read many years ago was a translation of a book by Soviet authors who stated that the revolution succeeded more by gaining control of the printing presses than by all the bullets fired in the field. For the Communists then proceeded to further wild inflation and to abolish private property and religion, so that every Russian became completely dependent upon the Communist government. Two Soviet writers even dedicated a book to the printing press in recognition of the part it played in inflating the currency of capitalist nations.

During and after World War II, the Soviets deliberately furthered wild inflation in all satellite areas as a preliminary to drawing them completely under the control of Moscow. The so-called Iron Curtain is really a money curtain, as is well illustrated by the fact that the introduction of the currency of West Germany into Berlin gave the Russians such alarm that they instituted the blockade. Stalin himself stated the currency had to be settled before the blockade would be lifted, but we refused to change our position.

The Soviet leaders believe in direct action against money systems of other nations. In 1921, Lenin wrote: "When we conquer on a world scale I think we shall use gold for the purpose of building lavatories in the streets of the large cities of the world." He then went on to say that the Soviet Union should save gold, however, for use against capitalist nations. If the Russians had the goods, you may be sure that we would see again many charges that Soviet Russia was dumping products of slave labor on the countries of the free world. With the credits gained in these and other ways and the gold, dope and other valuables which can be easily transported, they have long been financing the propaganda and subversive campaigns which local Communist parties conduct in nearly every country around the world.

The Communists understand clearly that the one sure way to eliminate the middle class is by wild inflation. This makes the rich richer and the middle class poorer, thus preparing the way for the acceptance of communism not only by the direct elimination of opposition but also by the discrediting of the former economic system. Furthermore, inflation undermines, if it does not destroy, the high standards of individual honesty and conduct which are fundamental to the development of the individual and to the mutual confidence necessary for the proper functioning of a democracy.

The Communist leaders also seem to realize fully the supreme importance of money to the capitalist world. And they know that war or near war is an almost sure means of causing the inflation of the money of their enemies, thereby weakening resistance to communism. Strong armed forces and occasional wars of limited nature are therefore welcomed not only to cause the fearful, both at home and abroad, to become more amenable to Communist control, but also to keep the free world in turmoil so great as to undermine the value of money and the basic strength of the various national economies.

Unfortunately, American leaders have neither demonstrated sufficient awareness of the importance of sound money nor have developed techniques necessary for maintaining it. China furnishes a classic example of how a financial policy of the United States actually assisted in the defeat of the national policy which it purported to serve. In 1934, the United States raised the price of silver in dollars. One of the chief reasons advanced for this action was that it would increase the purchasing power of the Orient, particularly China which had a silver (Mex) currency that had continued in use for many years as wars and warlords waxed and

waned. Chinese purchasing power did increase with the rise in price of silver, but only at the cost of sending the silver dollars to the United States. The increased value of silver, as well as the loss of currency, caused prices in China to fall which in turn brought on an immediate economic depression. China was accordingly forced off the silver standard in 1935 and thereafter had little backing for its currency other than public confidence in the integrity of the Nationalist government. During and after World War II, inflation of paper currency came on to undermine the Chinese economy, increase dishonesty, and facilitate enormously the acceptance of the Chinese Communists.

Thus a chief cause for the communization of China was the loss of the Chinese silver currency and its replacement by paper currency of an ever-diminishing value.

The lack of knowledge of American leaders concerning money matters is clearly indicated by the story of allied military currency which all allied forces used immediately after the end of hostilities. Our wartime officials sent the original plates for this currency to Russia where enormous quantities of bills were printed. This money, identical to that paid American soldiers, was then used to pay many months of backpay to Soviet soldiers in occupied areas who were not permitted to send the money home in the form of rubles. Soviet personnel therefore used the currency lavishly to purchase watches and other desirable articles, particularly from Americans who had a wealth of things of rare value in Russia.

American personnel, however, were permitted initially to exchange this allied military currency for dollars which could be returned to the United States. When our finances officers finally were forced to survey their situation, they found themselves with some 360 million more allied currency than they had issued. By that time, this had been exchanged for dollars by American soldiers and sent to the United States, so that an actual deficit of this amount of dollars had been created. In early 1949, however, the United States eliminated this deficit by the simple expedient of keeping for itself the dollars earned by the economies of Germany, Austria, and Japan. The Russians nevertheless had outsmarted the United States to the tune of $360 million.

Perhaps the most serious international problem our Nation faces is how to give economic and military aid to allied nations and yet require them to use this aid without furthering inflation. China is a classic example of this, as mentioned above. All during the Korean war, the Republic of Korea Government was unable to stop the serious inflation of their national currency. Nor was the United States able to remedy the situation, with the result that while our American soldiers were giving their lives in the defense of South Korea, behind the front inflation was destroying the economy of the nation which we were fighting to defend, and compelling the ROK leadership to adopt dictatorial measures far more appropriate to communism than to democracy.

President Eisenhower recognized the disadvantages of both inflation and inflationary controls when he recently stated: "If reasonable stability of prices cannot be reached * * * the alternatives are either inflation, which would damage our economy and work hardships on millions of Americans, or controls, which are alien to our traditional way of life, and which would be an obstacle to the Nation's economic growth and improvement."

The President, like many other thinking Americans, has become increasingly disturbed at the creeping inflation which has characterized our economy since the early days of the New Deal in 1933. Since that time our Nation has operated within its income in only 4 years. Our national debt has risen in this period to over $280 billion. During the present fiscal year it is anticipated that we will have a deficit of nearly $13 billion.

These figures serve to emphasize that creeping inflation, like strong drink and narcotics, cannot be taken without great danger that it will become so habitual that the patient will either eventually be destroyed or the cure itself will take all the patient's energies and will incapitate him for other activities during the period of his treatment.

Inflation is necessary to a degree in time of war; in such an emergency taxes and borrowings simply cannot provide all the revenue required to finance operations. We have experienced two resulting periods of such inflation in the last 20 years.

Politicians have learned the ease with which funds can be appropriated even when the money required cannot be obtained by noninflationary methods. Labor unions in successive round of wage increases both use past inflation as the basis of their demands and cause the inflation to continue. Proponents of national defense, welfare programs, foreign aid, and other less important projects advocate their objectives as being far more necessary than a balanced budget.

Some economists even advocate controlled inflation as the best way to obtain continued prosperity and to avoid occasional depressions; one such view pinpoints the required amount of inflation as 2 percent per year, a view which is alarmingly like advocating that everyone take two drinks of whisky each night. While there may be some stalwart individuals who could always use both inflation and whisky in moderation, there are countless others who do not have the judgment or fortitude to do so where either the one or the other is concerned. Inflation, like whisky, is a strong medicine that may be necessary in real emergencies but cannot be recommended for a steady diet.

The various checks and balances built into the American system of government actually are a handicap to the exercise of proper control over inflationary tendencies. At least some governmental agencies look narrowly at their own interests, advocate policies that further inflation, and support similar excess requests from other sources in order to obtain a wider support for their own programs. If the Communists are right in teaching that capitalism contains the seeds of its own destruction, these seeds will surely feed chiefly on the resulting inability of our government to limit expenditures to the funds that are known to be available.

The management of money is far more difficut in the United States than it is in Russia. Both countries use money, as the great and only common denominator, for integrating the many national programs in annual budgets. But in the United States money takes various forms such as stocks, bonds, and credits, is scarcely distinguishable from personal property, and in controlled by officials who feel responsible for obeying the mandates of the people, while the electorate on the whole understands neither the importance nor the techniques for the maintenance of financial health.

In Russia, however, the dictators do what they wish, in apparent disregard for public opinion, as occurred in 1947 when they issued a new currency on the basis of one new ruble for ten old ones, with a more favorable rate on a very limited basis. This action was a true "capital levy," an action which was intended to eliminate inflationary effects brought on during World War II. Such a course would prove practically impossible for fair application here in the United States. As a matter of fact the Soviet action was widely misunderstood by Americans, as is well indicated by the New York Times which headlined that the action was a devaluation when it was just the opposite.

Another interesting comment is that both the United States and the Soviet Union have abandoned the theoretical principles of their own system and have moved toward the system of the other. Soviet Russia has turned its back on a moneyless society as was originally planned and has increased the importance as well as the value of its money. Americans have abandoned the gold standard and have placed gold and silver in the ground where it is used only to make international payments.

There are many who believe that a return to the gold standard would provide a safety valve that would make the value of the dollar independent of the combined inflationary effects of governmental decisions, or at least, would offer a sound and solid basis for the maintenance of public confidence in gold-backed currency. There are others who believe that Soviet Russia has accumulated tremendous stocks of gold to use against our currency when the occasion is ripe. If neither of these conclusions is true, it is nevertheless correct to say that all indications point to the fact that Soviet Russia, where money means little, has concentrated on producing gold, while the United States, where money means everything, has for 25 years done much to discourage and to reduce the production of gold.

The events of recent months have emphasized the seriousness of our gold situation. We have in the past year been forced to ship a large amount of gold overseas to settle accounts with other nations and are in danger of losing a great deal more if foreigners become worried about the declining value of the dollar. This situation makes clearcut the fact that our Nation is actually on the gold standard in international fields but refuses both to extend this privilege to our own citizens in domestic matters and to take normal action to build up our own stocks of gold to meet all possible emergencies.

The restoration of the gold standard in the United States would require a change in the price of gold which is arbitrarily set by the Government. The price presently effective was set in 1933, so that the mining of gold is steadily decreasing as this is far from being a profitable operation at the high costs of today. It would therefore be necessary to raise its price with a return to the gold standard, so as to insure increased production.

Those of us who live in the Pikes Peak region should be particularly concerned about a return to the gold standard, the existing price of gold, and the stocks of the precious metal available to our Government. We owe much to the gold of Cripple Creek—and would profit much more in the future if the price of gold were raised—or even if it were permitted to seek its own price in a free market.

The difficulty in our present situation is that most Americans do not understand money matters so that it is a fertile field for the activities of misguided idealists who seek full control over matters economic and accordingly object to the strict honesty imposed by the gold standard. I once heard an outstanding economist, who became quite well known in the New Deal, say that we might as well take all our gold and sink it at sea, a solution which is very near the same as that proposed by Lenin but much less practical. The Assistant Secretary of the Treasury who took a leading role in sending to Russia the plates for occupational currency was later accused of being a Communist and after the war killed himself under conditions which suggested that he had either a conscience that was very guilty indeed or a knowledge of Communist subversion that could not be disclosed.

All of the above considerations lead to the inescapable conclusion that the most im-

portant thing in the American world is the nature of the decisions which come out of governmental agencies in Washington. If these decisions undermine the basic principles and incentives which have caused our national growth and strength, we can expect a corresponding decline in our power as a Nation and our worth as individuals. In order to prevent such retrograde action, we must in particular maintain the value of our money by balancing expenditures and revenues and by avoiding the many evils of creeping inflation.

In the sayings of Confucius, as translated by Lionel Giles, the Chinese Solomon is quoted in answering a question as to the essentials of good government. The only one of five such essentials which Confucius repeated for emphasis was. "The wise man and good ruler is benevolent without expending treasure." Interpreted somewhat freely, this means, "Keep your welfare and giveaway programs within the limits of available income so that proper incentives may be maintained to encourage every citizen to reach ever high standards of living, efficiency, and production, as a matter of his own choice, rather than from compulsion."

The struggle in the world today is basically between two economic systems, capitalism and communism. While we must keep our national economy and our Armed Forces strong; the issue will be decided entirely by the thoughts and motivations which exist in the hearts of our people. Not only will too much Government welfare and charity inevitably undermine the self-respect and independence of recipients, but lack of a sound money will also lessen their incentive for hard work.

It is no exaggeration to state that the greatest danger to the United States of America is not in the possibility of unlimited or limited war. Our greatest danger is that we may fail to follow those policies which are best calculated to maintain the psychological and financial health of our great Nation.

To the extent that the American dollar loses its value and its attractiveness, no matter how slowly, to the same extent there occurs a weakening in the strength of our economy, in the mutual confidence among our citizens, and in our adherence to the basic principles of Americanism. Should the dollar ever lose its position as the fundamental incentive for individual initiative and effort, in its place must come domination of the individual by the State. May the day never come when ordinary Americans will say, "I can get as many dollars as I want."

Statement of James F. Daniel, Jr.

EXTENSION OF REMARKS
OF

HON. W. J. BRYAN DORN

OF SOUTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Monday, March 2, 1959

Mr. DORN of South Carolina. Mr. Speaker, Federal aid to education would be a terrible blow to the concepts, heritages, and traditions upon which America was founded. The following statement by James F. Daniel, Jr. of Greenville, S.C., was recently made before the Senate Labor and Public Welfare Committee. Mr. Daniel has been chairman of the Americanism Commission of the American Legion for many years. He has devoted much time to a study of communism and dictatorships in general. He is well aware of the totalitarian state's control of education and the minds of youth.

Mr. Daniel is a great American and in this statement is representing the American Legion. I commend this statement and principles adopted by the American Legion to every Member of Congress.

STATEMENT OF JAMES F. DANIEL, JR., CHAIRMAN OF THE NATIONAL AMERICANISM COMMISSION OF THE AMERICAN LEGION, IN CONNECTION WITH HEARINGS BEFORE THE SENATE LABOR AND PUBLIC WELFARE COMMITTEE ON BILLS RELATIVE TO PROPOSED FEDERAL AID TO EDUCATION

My name is James F. Daniel, Jr. I reside at Greenville, S.C., and I am the chairman of the National Americanism Commission of the American Legion.

I wish first to thank you on behalf of the American Legion for permitting me to submit this statement in connection with your hearings on the bills pertaining to Federal aid to education.

On the basis of its record of performance in the field of education, I respectfully submit that the American Legion is qualified to speak on this matter and that its views are worthy of serious consideration.

At the 1958 national convention of the American Legion held at Chicago, Ill., September 1 through September 4, the accredited delegates representing every State in the Union and our Territories and possessions, unanimously adopted Resolution No. 567, containing the following restatement of principles with respect to the relationship of the National Government to public education:

"Whereas the Constitution of the United States is a compact between sovereign States joining together for limited purposes, with the predominant intent of reserving unto the several States and to the people thereof all power, save and except those which were expressly granted to the Federal Government; and

"Whereas the American Legion has always strongly adhered to the philosophy of broad, popular education for citizenship and has vigorously supported a universal, publicly supported system of primary, secondary, and higher education under the complete control, authority, direction, and responsibility of the respective States and school districts therein, so as to insure that every American child has the opportunity for an adequate education; and

"Whereas broad, permanent programs of Federal financial appropriations for general educational purposes to State elementary or secondary schools or institutions of higher learning or, for their use or benefit, would inevitably result in loss of local and State control and the establishment of supervision, direction, and control by Federal agencies over the expenditure of such funds; and

"Whereas such Federal domination and intervention would make possible centralized thought control, propagandized and collective captives of our children, and the ultimate destruction of our constitutional form of government: Now, therefore, be it

"*Resolved, by the 40th national convention of the American Legion, assembled at Chicago, Ill., these 1st to 4th days of September, 1958,* That it does hereby adopt the following restatement of principles and policies with respect to intervention in or financial assistance to general public education in the elementary, secondary schools or State institutions of higher learning:

"1. The State and local governments ought to, can and should assume and adequately take care of all needs of public elementary and secondary schools and State public institutions of higher education;

"2. The States and local communities have the financial capacity to meet the proper requirements of general public education in the respective States;

"3. The National Government should avoid interference, control, supervision, or direction in the educational processes, programs, activities, or systems of the respective States or local school districts, either directly or indirectly, by grants-in-aid, appropriations, gifts, or loans for construction of schools, buildings or facilities, teachers' salaries, general student scholarships, equipment or other purposes; by curriculum or program control, or by action of any officer, agency, branch, or department of the U.S. Government;

"4 Under our Constitution each State is, and should be, vested with complete, sole and final power, authority, direction, supervision, and control of every facet of public education within its borders, with the largest possible measure of home rule and autonomy delegated to the local communities;

"5. It is recognized that in certain specialized or restricted programs or projects of a temporary duration, or during time of war or grave national emergency, or where it is directly necessary for the support of operational programs of Federal agencies, the Federal Government has the authority to maintain or operate its own educational institutions or programs, to appropriate funds therefor, to use grants-in-aid, or to make contracts with State or private institutions; provided, however, that no such action should infringe upon the rights or powers of the States or local communities, nor should any department, agency, branch, officer, or employee of the United States in an official capacity ever exercise any direction, supervision, control, or authority over the personnel, curriculum, property, facilities, or programs of any State or local school or school system or agency or State institution of higher learning; and be it further

"*Resolved,* That the national commander and the national legislative director are hereby mandated to present the position of the American Legion, as above set forth, to the Congress of the United States and to vigorously oppose all legislation which violates these principles."

GENERAL STATEMENT

The American Legion believes that the real vitality of our country lies in decentralization of the powers of government. We have an abiding faith in private enterprise and local initiative. We are convinced of the necessity to allow each community to decide its own educational policies and programs.

SPECIFIC OBJECTIONS

1. With the Federal budget already heavily burdened, additional appropriations of millions of dollars for services which are the responsibility of States and local communities, cannot be justified.

2. Dr. James B. Conant, one of America's best informed authorities in the field of education, concluded from a recent personal survey made on educational needs, that a large number of secondary schools should be consolidated to provide better educational facilities and opportunities for our youth. At the same time this would reduce costs of operation thereby eliminating any need for Federal funds. In a recent address before the National School Board Association in San Francisco, Dr. Conant stated that he favors leaving it up to each community to determine what it is willing to expend for public schools.

3. In view of the many and varied educational bills being introduced for consideration by the 86th Congress, it seems evident that the proponents of Federal aid to education are more concerned with obtaining large sums of money to spend indiscriminately rather than to first determine need and value of the grants provided by the 85th Congress.

CONCLUSION

Any objective analysis of the educational system in the United States will inevitably lead to the conclusion that the pending proposals for Federal aid to education are unnecessary, unreasonable, unsound, and dangerous to the preservation of local initiative and vitality. The ultimate net result of Federal aid to education is to transfer a portion of the total educational costs to the Federal budget, and to restrict local freedom of decision and action. This the American Legion definitely opposes.

Hon. Daniel A. Reed

EXTENSION OF REMARKS
OF
HON. CHARLES E. CHAMBERLAIN
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Monday, March 2, 1959

Mr. CHAMBERLAIN. Mr. Speaker, although the late Representative Dan Reed had been missing from the House of Representatives ever since the 86th Congress began, it is still difficult to realize that his friendly counsel and constructive leadership will not be returning.

I feel a personal loss in Mr. Reed's death. When I first came to Washington 2 years ago, I could always count on Mr. Reed's patience in listening to my problems and his wonderful practical advice based on his many years of honorable service in the Congress. He always went out of his way to help newcomers and I know many a freshman representative has been grateful for his interest and suggestions.

But the late Representative Dan Reed, who represented New York's 43d Congressional District, also belonged in a very special way to my State of Michigan, and to the sixth district which I represent.

The Flint Journal of February 22 devoted a substantial portion of their editorial page to an article by William Pyper describing the loss which Dan Reed's death was to the State of Michigan. This was in addition to a news story carried in the paper on February 19.

Mr. Speaker, I sincerely share these comments, and would like to submit these articles of tribute for inclusion in the RECORD:

WOLVERINES IN WASHINGTON—REED'S DEATH LOSS FOR MICHIGAN

(By William F. Pyper)

WASHINGTON.—When Daniel Alden Reed died the other day, Michigan suffered a significant loss.

Although he represented New York's 43d Congressional District and was a native of New York State, he often told his colleagues that he regarded Michigan as his home State. There are few around Washington who can remember back in 1918 when Mr. Reed was elected to Congress, but he was an official of the Flint Chamber of Commerce at the time.

They say he did not even have to return to his district for the campaign, and he has been reelected easily in 20 subsequent biennial elections.

He was widely known around Michigan at the time of his residence there. In addition to the oldsters who remember his actual service in Flint, there will be people all over the State who have made his acquaintance during the 42 years he has served in Congress.

In Dan Reed they always found a kindly man who was willing to listen to their problems, and one, in recent years at least, who was able to be of service. He had been in the House longer than any Republican, and was outranked in seniority only by two Democrats. He was top Republican on the Ways and Means Committee, where all tax and tariff legislation originates. He was chairman during the 83d Congress, in 1953–54.

Mr. Reed was a special friend of the late Representative Roy O. Woodruff of Bay City, who served with him many years on the Ways and Means Committee. In their day, up to Mr. Woodruff's retirement in 1952, they often teamed up to push through some tax provision which was of primary interest to Michigan industry and business.

In those days, when Michigan Congressmen held five House committee chairmanships, Representative Reed was virtually a member of the State's delegation. Woodruff, then chairman of the House Republican conference; the late Earl C. Michener, of Adrian, then chairman of Judiciary; Jesse P. Wolcott, of Port Huron, chairman of the Banking and Currency Committee; George A. Dondero, of Royal Oak, chairman of the Public Works Committee; and the late Fred Bradley, of Rogers City, chairman of the Merchant Marine and Fisheries Committee, all were closely associated with him.

Representative CLARE E. HOFFMAN, of Allegan, who came to Congress later but by that time was chairman of the Government Operations Committee, is about the only Michigan lawmaker remaining who was a member of that class, which certainly included the late Representative Carl Mapes, of Grand Rapids. Mr. HOFFMAN recalls particularly how Mr. REED always referred to Michigan as his home State, and how closely he worked with the Michigan delegation in getting the St. Lawrence Seaway authorization through Congress.

Younger Michigan Members of Congress soon came to know that DAN REED was a ready and able source of advice and counsel. Representative GERALD R. FORD, JR., of Grand Rapids, for instance, found a kindred soul. Both had played football and had done a little coaching—a generation apart.

Representative REED never forgot his association with the automobile industry in Michigan back in the days just after World War I. In his position in Washington he had seen the industry grow to become a giant factor in the Nation's economy, and he was always ready to listen when it had a problem.

For that reason, he was involved in the numerous attempts in recent years to reduce or eliminate the manufacturers' excise tax on automobiles. Numerous Michigan Congressmen have worked with him on the project. The efforts will continue, doubtlessly, but without the tax and legislative know-how of Mr. REED they will be handicapped.

One Wolverine in Washington who did remember was Postmaster General Arthur E. Summerfield. Then a real-estate dealer in Flint, Summerfield recalls that DAN REED was secretary of the Flint Chamber of Commerce when he joined.

"He was there at the first meeting I ever attended," the Postmaster General said. "To me, he always has been a model of what a public servant should be. We've lost a symbol of integrity in government."

STARTED BOARD OF COMMERCE—REPRESENTATIVE DAN REED, BOOSTER OF FLINT, DIES

Flint lost an ardent supporter and one of its outstanding leaders of World War I days with the death today in Walter Reed Hospital, Washington, of Representative DANIEL A. REED, New York Republican.

He was a former managing director of the Flint Chamber of Commerce. The formal "DANIEL" soon became "DAN" to everyone who knew him.

Mr. REED, characterized as an outstanding leader in Flint during the first World War period, came here from his native Dunkirk, N.Y., in the winter of 1916–17. The city then was just beginning to feel its strength as an automotive center.

Representing the American City Bureau, his assignment here was to conduct a membership drive and put into successful operation the then board of commerce. It became the chamber of commerce in 1920.

The task was considered ideal for Mr. Reed—such was his reputation as a spellbinder and civic booster. That he quickly was named managing director of the board attests to the success he achieved.

During the war, Mr. Reed was called to Washington several times to help in the work of the Government. He was placed in charge in the central western area during a $100 million campaign for the Red Cross. He also helped in a second drive.

Later he was sent to England and France as special representative of the Federal War Food Administration.

He described the experiences of that trip to overflow audiences at St. Paul's Episcopal and Court Street Methodist Churches here in February 1918.

Mr. Reed left his board of commerce post here in 1918, after he was elected to the House of Representatives from the 43d New York District. He took his seat in Congress the following spring and had retained it ever since.

Mr. Reed's attachment for Flint was marked by a number of return visits and his continued popularity was demonstrated by the enthusiasm accorded his talks.

"Cooperation has made Flint a model city," he told his colleagues in the House.

An appeal he made in a speech here in 1938 gives him a clue to his own philosophy and the deep concern he had for Flint's well-being.

At that time he asked Flint's businessmen, factory workers, professional men and all others to drop their personal feelings in favor of a constructive, energetic drive to make Flint known as one of America's outstanding cities.

"Nothing can be accomplished by inaction, dissension or a defeatist attitude," he always insisted.

Mr. Reed once described Flint as "A community of generous, courageous, stalwart citizens, setting progressive examples for all America."

A theory he expounded here about cities in 1918 seems no less apropos today.

"If a city," he said then, "does not have stamina enough to live up to her reputation it should not acquire one.

"Flint is in the championship class," he declared. He warned that "a city that fights its way into the championship class and declines to defend its title is pretty apt to be termed a quitter."

That Youthful Spirit of 1898

EXTENSION OF REMARKS
OF
HON. BARRATT O'HARA
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 24, 1959

Mr. O'HARA of Illinois. Mr. Speaker, as my colleagues may recall, the gentleman from Illinois has never overlooked

an opportunity to work in some reference to the Spanish-American war and to suggest, with due deference, of course, to other veterans, that the world never has seen better soldiers and sailors than the volunteers that toppled Spain from her pedestal six-and-more decades ago. It is to Miss Dorothy Taylor that I am indebted for a clipping from the January 14, 1959, number of Medical News that seems to furnish conclusive proof that the Spanish-American War veterans still are leading the pack. They are doing it now by outliving other people, and instead of getting bent and wrinkled actually looking 20 to 25 years younger than their years.

Miss Taylor, when working with the Congress as a member of the staff of the Representative from Illinois Second District, was recognized as one of the keenest brains on the Hill as well as one of its charming personalities. The number of her friends here is legion. She is now associated with Billings Hospital in Chicago, and so valuable are her services that if I were to suggest even in a whisper that her country needs her again in Washington it would be at the risk of losing permanently the votes of the eminent physicians and surgeons at that great and famous hospital. They would be willing to give most anything to their country, but not Dorothy Taylor.

The article from Medical News follows:

OLD SOLDIERS

Eleven hundred Massachusetts veterans of the Spanish-American War have succeeded in putting out of joint the current actuarial predictions on life span. They are living too long.

According to estimates based on mortality tables, only about 500 of these veterans should be alive today in Massachusetts. The fact is there are 1,600.

The Veterans' Administration outpatient clinic in Boston is making a detailed study of their physical and emotional condition, diet, and history to help explain their longevity and find out why some look 20 to 25 years younger than their actual ages.

Khrushchev's Threat

EXTENSION OF REMARKS
OF
HON. HALE BOGGS
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Monday, March 2, 1959

Mr. BOGGS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Carroll Kilpatrick, which appeared on February 14, 1959, in the Washington Post and Times Herald:

U.S. ECONOMIC SUPREMACY IS PUT TO TEST

Premier Nikita S. Khrushchev's economic challenge to the United States is regarded by experts in Government and private circles here as exaggerated in detail but nevertheless a serious long-range threat.

Some officials go so far as to say that this economic challenge has now become greater even than the military challenge, and that Russia and China combined eventually will outproduce the free industrial countries.

President Eisenhower, however, told his last press conference that he did not believe an expanded Federal program was necessary or desirable as an answer to the Soviet 7-year plan.

In Khrushchev's speech last month at the 21st Communist Party Congress, the Soviet leader extolled the complete superiority of socialism over capitalism and said that by 1970 Russia will attain the world's highest standard of living.

Khrushchev told the assembled party delegates that the Soviet's fundamental economic task is to overtake the most highly developed capitalist countries in per capita production.

"If we calculate on a per capita basis," the Soviet Premier said in the course of his lengthy discourse, "we will probably need, after the fulfillment of the 7-year plan (in 1965), about 5 more years to catch up with and outstrip the United States in industrial output.

"Thus by that time (1970), or perhaps sooner, the Soviet Union will advance to world leadership both in absolute volume of production and in per capita production."

Secretary of Commerce Lewis L. Strauss, in a speech Wednesday in Chicago, dismissed Khrushchev's claims as boasting, and pointed out that in 1958 the gross national product in the United States was $437 billion compared with about $180 billion in Russia if you want to believe their statistics.

Nevertheless, Strauss warned that Russia's foreign trade offensive is a serious menace which the general public does not yet appreciate.

Russia is not in business for business, but for economic warfare, the Secretary said.

It is this new trade potential that bothers experts more than Khrushchev's grandiose claims of beating the United States in total and per capita production.

With its growing economic power, Moscow will be strong enough to use trade more and more as a weapon of the cold war, directing trade with one hand where it will do the most good from the Communist viewpoint and withholding trade with another hand if it decides to crack down on a country that is not toeing the line.

Even more disastrous for the West would be a demonstration of Soviet economic progress at a time of economic recession in the leading capitalist country.

If Moscow is able to conduct its economic offensive on the basis of greatly expanded production at home, and if the United States decides it cannot afford to promote certain economic programs either at home or abroad, the lesson would quickly be apparent to all the uncommitted countries as well as to America's friends.

Some experts argue that the statistical race between the United States and Russia is not too significant. They quote Paul Henri Spaak, Secretary General of NATO, who recently said, "I feel that a rich Communist is probably less to be feared than a poor Communist."

"What we must realize," Spaak said, "is that the Communist goal is not merely an economic or a social threat; it is much wider; the ambition of communism is to be the wellspring of a new civilization, in which the essential foundations of our spiritual, intellectual, moral, and political life will be challenged."

One expert summarized the issue this way: "For us to say we cannot afford aid to India or cannot afford adequate schools, or cannot afford a proper defense, is to admit failure.

"We must maintain a satisfactory rate of growth—not to postpone the time the U.S.S.R. matches our productive capacity but to demonstrate for ourselves and the rest of the world that our system works."

The rate of progress could be more important, particularly in the eyes of the underdeveloped countries, than the absolute difference between the United States and Russia. Russia's rate is now between 6 and 8 percent a year and China's is reportedly as high as 10 percent. The U.S. rate, which dropped considerably last year, averaged 4 percent between 1947 and 1956.

It is conceded that Russia's rate of growth will continue to be about twice that of the United States, but even so, gross national product in the United States in 1970 will be almost twice Russia's. Not until the turn of the century, according to American experts, will Russia equal America in total output.

As one indication of Russia's more formidable economic base is the substantial industrial progress that has been made in the Eastern European satellites. To the surprise of most observers, postwar development in the satellites has been impressive, and Poland, East Germany, and Czechoslovakia are now in the vanguard of the Soviet bloc in seeking trade contacts with the Afro-Asian countries and Latin America.

Jan Wszelaki, prewar economic adviser to the Polish Government and specialist in Eastern European economics, shows in a new study for the National Planning Association that the satellites have obtained impressive economic footholds in a number of underdeveloped countries. The Eastern European countries and Russia need raw-material imports which the underdeveloped countries are all too eager to sell.

In return, the satellites are increasingly able to "supply the kinds of industrial goods the developing countries can use," Wszelaki says, adding that Moscow has assigned this trade "high political priority."

Instead of being a burden on the Soviet Union, the satellites have become of great value, particularly in the last year or two, he writes.

Wszelaki declares that "control over East-Central Europe continues to be more than marginally important to Soviet economic development and * * * is of at least equal value in the Soviet trade-and-aid offensive."

He further notes, as part of Communist economic development, that Moscow soon will establish an international bank to finance economic projects in uncommitted countries.

Russia now is a poor second to the United States in total industrial production. In the reasonably near future it will be a strong second—a fact that will make a great impression on the rest of the world unless—all experts agree—the United States makes the best possible use of its machinery and resources to strengthen itself and its associates in the free world.

Sino-Russian Clash for Trade Visioned

EXTENSION OF REMARKS
OF
HON. HALE BOGGS
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Monday, March 2, 1959

Mr. BOGGS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Carroll Kilpatrick appearing in the Washington Post and Times Herald, February 20, 1959:

SINO-RUSSIAN CLASH FOR TRADE VISIONED

Both Moscow and Peking have been at pains in recent weeks to deny that there is any rift between them. Nevertheless, there is a growing belief here that the relationship is not an easy one and that there are now the first faint signs of a rivalry that could have a profound effect on the world's future.

The most substantial evidence for this belief is found in the latest trade agreement

between Communist China and Soviet Russia.

With much fanfare, Soviet Premier Nikita S. Khrushchev and Chinese Premier Chou En-lai earlier this month signed in Moscow a new agreement that is notable mainly because of its modest size.

It provides for a 5-billion-ruble exchange of goods over a period of 9 years. At the official exchange rate, that is $1¼ billion, or about $140 million a year. At the unofficial rate, it would be considerably less.

But even a trade of $140 million a year is not much between 2 major countries. In 1957, for example, the United States exported more than $4 billion worth of goods to Canada. This country's exports to Turkey in 1957 reached almost exactly $140 million and nearly $150 million to Yugoslavia.

The trade between the two greatest Communist countries will be on a strictly pay-as-you-go basis. Despite the protestations of friendship, there are no credits or gifts from Moscow to Peking.

Tass, the official Soviet news agency, said that Russia will deliver materials and equipment designed to build China's industry and that China will pay for the goods by delivering to the U.S.S.R. goods on conditions already determined in the existing Soviet-Chinese trade agreements.

These will include mainly food and agricultural materials and some manufactured consumer goods sorely needed in China. It may be that China does not want credit. In any event, for the last 2½ years China has exported more to Russia than it has imported from Russia—which certainly leads to the impression that Peking isn't eager to become dependent on Moscow.

Earlier this month, Khrushchev savagely denounced Senator HUBERT H. HUMPHREY (Democrat, Minnesota), because he wrote that the Soviet Premier had spoken to him critically of the Chinese Communists. The outburst, HUMPHREY said, "indicates a high degree of insecurity in the relationships between Soviet Russia and the Communist Chinese."

Moscow may already be disturbed by China's claims of economic development. The progress has been substantial, and the Chinese claim a faster rate of growth than the Russians.

With its huge population, there is no reason why China eventually may not outproduce Soviet Russia or the United States.

A study by the Research Institute of America, a private organization, on "Communism's New Economic Challenge," says that "Peking's staggering goal is nothing less than the transformation of China's primitive economy into a modern industrial heavyweight capable of competing with either or both the Soviet Union and the United States within 10 years."

Whether the goal can be reached is by no means certain, but the study warns the West not to be lulled by China's difficulties into underestimating the progress and eventual accomplishments of the Peking regime. In the last 6 or 7 years China has more than tripled its production of iron and steel and more than doubled its production of coal and electricity.

Of course, its production must be multiplied many times before it can meet the needs of 600 million Chinese, much less engage in a large foreign trade.

But like Russia it can carry on selective trading that could cause much confusion in the world's markets to China's advantage. The research institute study points out that China already is attempting to make its economic influence felt in south Asia and even in the Middle East, long a goal of Russian policy. If China could arrange an oil deal with Iraq, for example, it could end its dependence upon the Soviet Union for petroleum.

"Mao and not Khrushchev stands as the champion of the future for multitudes in these pivotal areas," the study says.

It concludes that friction between Moscow and Peking is almost certain, if it does not already exist. This friction and rivalry suggests, it says, that Russia may desire closer relations with the United States to help it offset China's growing power.

"It is probably not an accident," the report says, "that the highest priority of the new (Soviet) 7-year plan is the industrial development and population of the Soviet Far East, the area north of China whose untapped rich raw materials and lack of population make it the most attractive future goal of Chinese expansionism."

Farmers Union: A Record of 25 Years of Service to Wisconsin Agriculture

EXTENSION OF REMARKS
OF
HON. LESTER R. JOHNSON
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 11, 1959

Mr. JOHNSON of Wisconsin. Mr. Speaker, on February 27, Kenneth Hones, of Chippewa Falls, Wis., retired after 29 years of service to the farmers of my State. Back in the late 1920's, as the operator of a family-sized farm near Colfax in my home district, he recognized the need for farmers to work together to help themselves out of the catastrophic depression in which they were caught. After working long hours on his farm, he put more long hours into the organization of the Wisconsin Farmers Union. This accomplished, he served on its board of directors for 29 years. During the past 25 years, he has been state president of the Farmers Union, which now numbers 10,721 Wisconsin farmer families in its ranks.

I first met Mr. Hones in 1935, when I was chief clerk of the State assembly, and he came to our capital city of Madison on behalf of his fellow farmers. I found him sincerely dedicated to the Farmers Union principle of the security of the farm family on the family-type farm through cooperation, legislation and a better understanding of the economic processes of this country.

When the Wisconsin Farmers Union celebrated its 25th anniversary in 1955, Mr. Hones paid tribute to the accomplishments of its members. Although he didn't intend his message that way, it is in reality also a tribute to Kenneth Hones and the part he played as leader of a group which came so far and did so much in such a relatively short period of time. Under leave to extend my remarks, I would like to include parts of Mr. Hones' silver anniversary message in the RECORD:

FARMERS UNION: A RECORD OF 25 YEARS OF SERVICE TO WISCONSIN AGRICULTURE

The Wisconsin Farmers Union came into existence during the hectic days of farm turmoil of the late 1920's. The great financial boom was on in 1927 when organization work was started in Wisconsin by the Northwest Committee for the National Farmers Union. However, even as the stock market boomed, the depression on the Nation's farms was deepening—but its effects had not yet reached the cities. Finally, in 1929 and 1930, the farm crisis toppled the whole economy.

Toward the end, 1930, the Northwest Committee had a substantial amount of membership work done, and the State organization received its charter from the National Farmers Union on November 6, 1930.

Young as it was, the Farmers Union immediately faced up to the problem of grappling with the farm depression, which by that time was in full bloom. Hundreds of farm protest meetings were held, and County Farmers Union presidents went to Washington to tell their story for the first time.

As a result of these protest meetings, a farm mortgage moratorium law was passed by the State and Federal Governments. Another result of the rural revolt was the Agriculture Domestic Allotment Act, which was later replaced by the Agricultural Adjustment Act.

Another highlight of the early days was the successful merger of the American Society of Equity and the Farmers Union. This merger welded the two liberal forces of Wisconsin agriculture into one effective group.

During Governor Phil LaFollette's administration, the Governor commissioned me on two occasions to represent him on legislative matters in Washington. The first assignment was on legislation to secure Federal aid to farmers who had lost cattle through the Bangs' testing program. The second was to make the lime and fertilizer program a part of the Triple A. Both of these Farmers Union projects were enacted into law.

There were other legislative successes. During the drought days, the Farmers Union fought for and secured the emergency seed and feed program. And in the midst of the depression, it was the Farmers Union which obtained the reduction of interest rates on Federal farm and chattel mortgages.

In the early days of the rural electrification program, the Farmers Union fought for greater recognition for the cooperative development of rural power. The first co-op generating plant in the United States was built north of Chippewa Falls.

When World War II broke out, the Farmers Union swung into action for greater farm production to feed our armies, our allies and our civilian population. We were about the only farm group which struggled to hold-the-line on prices to keep them from going war-time crazy. Had that line been held, we would all be in much better financial shape today.

The Farmers Union has battled against the sales tax, fought for Federal aid to schools and supported larger aids to rural schools. Our organization could well be called "the father of social security for farmers". We have supported our great university, our College of Agriculture, the vocational-agriculture program in our high schools and our State program of vocational and adult education. We have supported our Wisconsin Department of Agriculture in its great work.

For a quarter of a century, the Farmers Union has enjoyed the finest relationship with organized labor. We know that the industrial workers are our best market, and their daily income is an index of the price we can ask for the fruits of our labors.

All that we ask and all that we seek is equality of parity with labor, industry and the other segments of our society so that we may enjoy security on our farms.

Throughout the years, our Junior program has been one of our strongest assets. Many of our finest adult leaders in Wisconsin Farmers Union received their basic training in our youth program. The need for a permanent training center was so urgent

that plans for a membership-owned camp were started in the early 1940's. With the cooperation of hundreds of our members, Kamp Kenwood was built and has been in use since 1952.

Yes, the Farmers Union in Wisconsin has served agriculture and served it well during the 25 years since the organization came into being. What it will do in the next quarter century depends on the increasing cooperation of farm people and a better understanding by all people of the aims, purposes and program of the Farmers Union.

A New Approach to Labor-Management Cooperation

EXTENSION OF REMARKS
OF
HON. VICTOR L. ANFUSO
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 4, 1959

Mr. ANFUSO. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to insert an article by the well-known labor columnist Victor Riesel which was published in the New York Daily Mirror of February 27, 1959. The article is entitled "Hatters Aid Bosses To Make Jobs Profit," and deals with some very interesting phases of union activities by the Hatters, Cap, and Millinery Workers Union headed by Alex Rose.

I commend this article to the attention of all my colleagues because I consider the ideas contained therein as one of the soundest and most progressive manifestations of labor-management relationship. I believe that this should be held out to all industries as a great example of labor-management cooperation for all to follow. If we could succeed in establishing the same or similar approach and a willingness to cooperate on the part of both labor and management, we could avoid a great deal of unnecessary strife, needless strikes, loss of work and income. It would not only serve as a great boon to our continued economic growth, but it would help guarantee and strengthen our democratic system in the world's struggle for survival.

Mr. Speaker, only a profound statesman and a man of vision of the caliber of Alex Rose could think up and develop such an idea. This is a great innovation in the field of labor-management relations which should be explored and adopted by other unions and business enterprises which are seriously concerned with the welfare of our people and the growth of our economy. Alex Rose has once again shown himself to be one of our most able and respected union leaders. I salute him as a veteran and a pioneer in his chosen field.

The article reads as follows:

HATTERS AID BOSSES TO MAKE JOBS PROFIT
(By Victor Riesel)

There are hatters who aren't mad at anyone—least of all their bosses. These are union hatters.

Theirs is a small union of 40,000. Quietly they prove daily that it doesn't take size—it takes guts, imagination and daring to keep their industry a flourishing one.

They have invested some $5,000,000 to help the boss. They have fought off the mobs. They have battled slave labor Iron Curtain competition. They recognize that the class struggle is for undergraduates and that the bigger the profit, the higher the wage and the steadier the job.

For such principles, for example, this Hatters, Cap and Millinery Workers Union (AFL-CIO) has now decided to yield what it could have taken as a wage increase. This it does so the union and the employers can raise a half a million dollar kitty to promote the sale of headgear in a nation which is much too bareheaded.

This union—led by tall, bantering Alex Rose, once an infantryman in Gen. Allenby's desert army of World War I—has just joined the bosses in launching something called the National Cap and Cloth Hat Institute. Rose and the manufacturers want to revive the popularity of caps—really one of the first victims of the big time mobs.

Back in the Twenties, when the cap went with knickers like leaning tower with Pisa, this headgear became the symbol of the mob. Later the hoods turned to snap brims. But it was too late. From 55,000,000 the sale of caps slid off to 27,000,000. Union members and employers alike suffered.

They were saved by the Ivy League and convertibles. But now the institute—made up of labor and management directors—really wants to make the cap a steady and lucrative manufacturing field. At a moment when the noise of rackets, shakedowns, violence and hatred flares through some other fields, Alex Rose's union shows how it can happen here—a rational labor-management, live-and-let-live society, I mean.

The Cap Institute is just one instance in the life of a crusading union. Last year, for example, the labor chiefs learned that the owners of the most famous hat manufacturers' building in the land, 65 West 39th Street, in New York's garment area, were about to raise rents. They needed financing.

Rose sought out the realtors. He offered to loan them $2 million of the union's funds at a very modest interest rate. In return, he wanted a contract guaranteeing that the rents of the hat manufacturing lofts would not be raised for 5 years. Rose did not want the employers hit by higher costs. Nor did he want them dispersed from the center of hat fashions.

The realtors took the money and signed the contract—and the hat manufacturers stayed in business in a building easily accessible to the union's skilled workers.

There was a similar crisis at another building, 49 West 37th Street. The union had to buy the 22-story $1,500,000 structure which is jammed with hat manufacturers. Now the union is the landlord. And it is keeping rents low, so its employers can make a good enough profit to keep wages and the number of jobs high. The hatters have also put several million dollars in housing projects.

In 1954, when bankruptcy threatened the Charles H. Kartiganer Co., of West Upton, Mass., Rose's organization dug up $200,000, lent it to the company and kept it in business. Today the Kartiganer Co. flourishes—and so do the 650 New Englanders working there.

More recently, the Merrimac Hat Co., of Amesbury, Mass., was hit hard by competition from Communist Czechoslovakia. It was about to liquidate. Some 325 jobs would have been lost. The union actually bought the company by throwing $300,000 into it. Union officials were placed on the board of directors. But despite the controlling interest, the union decided to take no management role. The company is doing good business, my latest check shows.

Imagination? When the union itself needed money 5 years ago, it floated its own bond issue among its members at full interest rates. The money has all been repaid.

Guts? When the mobs moved in and ran racket shops which chiseled the Government on millions of dollars in military orders, the union had two of its people probe, expose, and wipe out the looting. How's it done?

"The answer," says Alex Rose, "is to do a constructive job. We stay away from the evil of corruption and the evil of fantasy and junk abstract, outmoded ancient labor philosophies. Serve the community as well as the workers and the men who employ us. Then labor and management can't go wrong."

Like I said, those are glad hatters.

Lesson of Korea Quickly Forgotten

EXTENSION OF REMARKS
OF
HON. CHARLES E. CHAMBERLAIN
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Monday, March 2, 1959

Mr. CHAMBERLAIN. Mr. Speaker, the Marine Corps is our highly mobile force in readiness. The Congress has repeatedly expressed the determination that it be maintained at an effective combat strength. We have not forgotten Korea and the heavy price we paid for not being prepared.

The primary responsibility for the kind of defense we shall have, the nature and size of our military organization, is vested in the Congress. But the Pentagon continues to ignore our expressed will.

I call your attention to the following editorial, entitled "Lesson of Korea Quickly Forgotten," which appeared in the Daily Pantagraph, Bloomington, Ill., on February 16:

LESSON OF KOREA QUICKLY FORGOTTEN

The U.S. Marine Corps had a strength of 442,796 men in June of 1944. This had dwindled to 67,000 when the Korean war broke out. It was hurriedly doubled in 6 months but was far below strength and made up of men with inadequate training because of the urgency of the need in combat.

Many lives were lost in Korea because boys with inadequate training had to be rushed into the firing lines.

One would think that this lesson would not be easily forgotten. Congress has not forgotten it. However, the administration appears to have had a lapse of memory for repeatedly the administration has failed to keep the Marine Corps at the strength prescribed by Congress.

Congress appropriated sufficient funds to maintain the corps at 215,000 men in fiscal 1956. The Pentagon set aside $37 million of the money and cut the corps down to 200,000.

For the fiscal year of 1958 Congress appropriated funds to keep the corps at 200,000. This would enable the Marine Corps to maintain not less than three combat divisions and three air wings, as required by law. But the Pentagon allocated funds for only 190,000 men.

For fiscal year 1959 Congress again provided enough funds for 200,000 men despite the Pentagon's announced intention of cutting the corps to 175,000 men.

The Senate Appropriations Committee was explicit in its action. It said "This decision to appropriate the funds necessary for

a 200,000-man Marine Corps was made with full consideration of the fiscal and military limitations. The committee desires that it be clearly understood by appropriate agencies in the executive branch of Government that it is the clear-cut intent of the committee, and of the proposed appropriating legislation, that the Marine Corps be maintained at the strength of 200,000."

Both House and Senate have made it clear that it is the desire of Congress that the Marine Corps be maintained at not less than 200,000 men so that, in the words of the House Appropriations Committee, it can "fulfill its traditional role in the national defense posture of this country as the Nation's force in readiness."

The administration, through the Pentagon, is thwarting the will of Congress, which has the constitutional right to provide for the Nation's defense. We do not believe that there is a desire of the President to cultivate dictatorship, but this is what is happening. When Congress is ignored the people have no effective voice in Government.

California Assembly Urges Equalization of Military Retirement Pay

EXTENSION OF REMARKS
OF
HON. JEFFERY COHELAN
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 11, 1959

Mr. COHELAN. Mr. Speaker, I want to call the attention of Members of Congress to a joint resolution recently introduced in the Assembly of the State of California by a group of 49 members of that body.

The resolution points to the failure of the Military Pay Act of 1958 to assure retirement benefits to military personnel on an equal basis and urges that the resulting inequity be corrected. A number of bills have been introduced here to do just that and among them is H.R. 3284 which I introduced January 26.

Joint Resolution 13 of the California Assembly reads as follows:

Whereas there is now pending before the Congress of the United States legislation concerning the improvement of benefits for retired members of the U.S. Armed Forces who retired prior to June 1, 1958; and

Whereas there appears to be no basis for the gross discrimination against retired personnel who retired before June 1, 1958, as they are, by reason of past meritorious services, equally entitled to the increased benefits granted personnel who retire, or have retired after such date; and

Whereas this false distinction violates the basic precepts of fair play, and the circumstances of retirement should not penalize these honorable members of our society, who must meet the present ever-increasing cost of living the same as personnel that retired after June 1, 1958: Now, therefore, be it

Resolved by the Assembly and the Senate of the State of California, jointly, That the Legislature of the State of California respectfully memorializes the Congress of the United States to enact legislation that will increase the retirement benefits of the retired personnel who retired prior to June 1, 1958, so that they will be treated equally with personnel who retire, or have retired, after such date.

California State assemblymen who joined in introducing this resolution February 5, 1959, were: Messrs. Mulford, Crawford, Luckel, Chapel, Bruce F. Allen, Bane, Beaver, Bee, Belotti, Biddick, Britschgi, George E. Brown, Ralph M. Brown, Burton, Busterud, Collier, Coolidge, Crown, Cunningham, Cusanovich, Mrs. Davis, Messrs. Elliott, Francis, Frew, Gaffney, Garrigus, Samuel Geddes, Hanna, Hawkins, Holmes, House, Kilpatrick, Lunardi, MacBride, Marks, Masterson, Meyers, Miller, O'Connell, Petris, Reagan, Rumford, Schrade, Sumner, Waldie, Williamson, George A. Willson, Charles H. Wilson, and Z'berg.

Record of Soviets

EXTENSION OF REMARKS
OF
HON. FRANK J. BECKER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 17, 1959

Mr. BECKER. Mr. Speaker, I think it very pertinent to call to the attention of all Americans a clipping in the New York Times under date of February 18, 1959, entitled "Record of Soviets," by Col. Augustin G. Rudd.

The clipping follows:

RECORD OF SOVIETS—THEIR BROKEN PROMISES STRESSED, OUR INDIFFERENT ATTITUDE SCORED

To the EDITOR OF THE NEW YORK TIMES:

The shocking revelations of the slaughter of American flyers by the Soviet Union and the proved mendacity of Mikoyan and other high Communist officials in concealing this uncivilized act once more emphasize the futility of expecting the Soviet Union to live up to any accepted standards of conduct among nations. In fact, the most solemn agreements to them are ignored at will.

Of course this is nothing new. The record of perfidy dates from the tragic day in November, 1933, when the United States recognized the Soviet Union. Although bitterly opposed by realists at that time, this recognition of a tottering regime that could hardly have lasted 6 months without our help has proved to be the greatest diplomatic blunder in modern times, if not in history. For it saved a ruthless system of slavery which has since engulfed 17 nations and has for its avowed aim the destruction of freedom in the remainder of the world.

This record of the Soviet Union, too little known, is laid bare in a report (1955) by the United States Senate of "nearly 1,000 treaties and agreements involving peace accord and fraternities entered into by the Soviet Union." The document stated: "The staff found that in the thirty-eight short years since the Soviet Union came into existence its Government had broken its word to virtually every country to which it ever gave a signed promise. * * * It keeps no international promises at all unless doing so is clearly advantageous to the Soviet Union."

PAST ACTIONS

No one has yet developed a sounder formula for dealing with men than to consider the record of their past. And yet important and intelligent Americans, particularly the liberals, act as if they never had heard of this grisly Soviet record still being duplicated daily. For instance, the recent visit here of Mikoyan.

Although his lies about the fate of our American flyers were not known to the public, his part in the betrayal and execution of the Hungarian leaders was public knowledge. This was the man selected by the Kremlin to go to Hungary and direct the suppression of the revolt. And this was the man who got the leaders to surrender on the promise of immunity and then promptly turned them over, with thousands of other Hungarian patriots, to the firing squads.

That the Communist-fronters and leftist-liberals would fawn at him was to be expected. But on what possible pretext could others welcome Mikoyan?

Everyone knows that the free world has been engaged in a cold war with the Communists since 1945. During World War II we saved them from Hitler with loans of $11 billion. Even Stalin admitted this. The cold war and the refusal to even partially repay this loan were our thanks. That the Communists are steadily winning this war is apparent.

PROPAGANDA ACCEPTED

And why are they winning? One cause is illustrated in the Mikoyan incident. We are no match whatsoever for the Communists in diplomacy, propaganda and other weapons of the cold war.

And so we accept the Mikoyans and their propaganda or other nefarious schemes. We never seem to learn.

What has happened to our sense of righteous indignation? Since the Boston Tea Party and before, a rising tide of public wrath over injustices of various kinds always has been a wholesome and invaluable characteristic of the American people. But this tendency is fast disappearing. An attitude of indifference or adjusting to an intolerable condition is taking its place.

Except for war against us, I can recall few instances better calculated to cause the blood of Americans to boil than the Soviet's wanton attack on our unarmed plane. And yet most of our people had almost forgotten the incident until the recent State Department revelations. Are we no longer capable of becoming "fighting mad" at outrages against our ideals and liberties?

AUGUSTIN G. RUDD,
Colonel, U.S. Army (Retired).
GARDEN CITY, N.Y., *February 10, 1959.*

TVA Contract

EXTENSION OF REMARKS
OF
HON. JOHN H. DENT
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Monday, March 2, 1959

Mr. DENT. Mr. Speaker, last week I introduced a resolution calling upon the TVA, the O.C.D.M., and other departments and agencies of government to reconsider the contract awarded to Parsons of England, for electrical equipment never before purchased outside the continental United States.

This order would have given much-needed labor to the many unemployed in my district, and other districts in western and eastern Pennsylvania.

In introducing this resolution I had the full support and cosponsorship of the following Members of Congress: Congressman ELMER HOLLAND, Congressman FRANK CLARK, Congressman MORGAN, Congressman MOORHEAD, and Congressman MILLIKEN, of Pennsylvania.

You will note, sir, that this effort is bipartisan. I have since been informed by the following Members of Congress of their full support in this endeavor: Congressman SAYLOR, Congressman VAN

ZANDT, Congressman GAVIN, Congressman KEARNS, Congressman RICHARD SIMPSON, and Congressman STANLEY PROKOP, of Pennsylvania.

I am sure that other Pennsylvania Members would join me if the opportunity presents itself to present a joint plea to bring this work to the workmen and industry of Pennsylvania.

Residual Oil Threatens the Coal Industry in West Virginia

EXTENSION OF REMARKS
OF
HON. KEN HECHLER
OF WEST VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Monday, March 2, 1959

Mr. HECHLER. Mr. Speaker, a news development which occurred over the weekend may soon prove heartening and encouraging to my home State of West Virginia.

It now appears possible that, at last, the Eisenhower administration is going to take steps to limit the vast imports of residual oil products which have flooded our shores from abroad. This residual oil has had a disastrous effect upon domestic coal markets in this country, and upon the economy of West Virginia—which is in the midst of a harrowing economic downturn.

I am hopeful that our President at last is recognizing the wisdom and accuracy of the viewpoint long expressed by the late Senator M. M. Neely, of West Virginia, who served ably and faithfully in both Houses of the Congress for many years.

The distinguished Senator Neely was one of the first to point out that unfettered residual oil importation could wreck the State's economy, which has been based upon coal markets. But his voice went unheeded, and the administration instituted a so-called voluntary program of oil importation limits.

This "jawbone" program has proved a miserable failure, and its lack of effectiveness has worked great hardship on the people of West Virginia.

This program has also had an undermining effect upon the national security, and it is upon this basis that mandatory curbs will be levied.

Mr. Speaker, during the past few weeks all the members of the West Virginia congressional delegation, led by Senators BYRD and RANDOLPH, have spent many hours meeting with Leo Leogh, Director of the Office of Civil and Defense Mobilization; Lewis Strauss, Secretary of Commerce; and top officials of the Department of Defense, Department of State, and Department of the Interior. We have worked long and hard to bring the facts forcibly to the attention of the responsible officials of our Government. We are convinced that the facts indicate conclusively that unless large-scale imports of residual oil are checked, the coal industry and the national security will be seriously impaired.

Mr. Speaker, America is the showcase of democracy in the free world. If a great industry and the economy of a great section of the country suffer, it hurts America's position in the free world. Furthermore, Mr. Speaker, as long as we have millions of unemployed and many on the verge of starvation we cannot expect to maintain the national morale necessary for a strong defense. Mr. Speaker, West Virginia is in serious economic trouble. My people cry out for help. We need action and action now to end this threat to our great coal industry.

I should like to commend to your attention the following article by Richard E. Mooney, of the New York Times. This article, published yesterday, explains fully the deleterious impact which the voluntary program has inflicted upon the Nation, and particularly the coal-producing States:

PRESIDENT SCANS RIGID OIL QUOTAS—EXTENDS VOLUNTARY PROGRAM—A MANDATORY PLAN IS SEEN AS ASSURED

(By Richard E. Mooney)

WASHINGTON, February 28.—President Eisenhower postponed the establishment of rigid oil import controls today to give himself time to study a report that the imports threatened national security.

The Government 20-month-old noncompulsory curbs program was scheduled to expire at midnight tonight. In preparation for the creation of a successor program, the Office of Civil and Defense Mobilization was directed to make a quick examination of the question: Do oil imports threaten security?

The agency submitted its answer to the President late yesterday afternoon, and the answer was Yes.

According to one authority, the findings were sufficiently broad to be construed as a recommendation for restriction of imports of residual oil.

USED AS INDUSTRIAL FUEL

Residual oil is left over after various products have been refined from crude. It is used in large quantities as industrial fuel.

It is not subject to import regulation at this time and the question of whether it will be is the biggest unknown in the whole proposition.

It seems virtually certain that the current noncompulsory ceiling on crude and semirefined products—1,113,600 a day—will be replaced by a mandatory ceiling of 1,025,000 barrels a day. If controls also are applied to residual oil, the ceiling might be higher.

The role of national security as a ban to imports rests on a clause inserted in the Reciprocal Trade Agreements Act in 1954. It was a compromise substitute for a specific restriction on oil imports that was proposed by a coal-State Senator.

The argument is that oil imports discourage exploration for the development of domestic sources, which would be needed in the event of an emergency.

The coal industry argues that its ability to perform in an emergency also is hurt by oil imports.

When the President establishes the assumed mandatory curbs on oil he will have done what the Senator—the late Matthew M. Neely, Democrat of West Virginia—wanted in the first place, except that it will not be written into law.

The President tried to do something less inflexible when he established the voluntary curbs on crude in mid-1956, but those curbs have not been fully effective. The clearest evidence of their less-than-full effectiveness was the fact that last spring they were expanded to include semirefined products.

Some importers had been dodging the spirit of the restrictions by partially refining their crude oil in foreign refineries so that it would not be crude oil and would not be subject to regulation. Imports of semirefined products soared until a ceiling was imposed.

FLOOD OF APPLICATIONS

Then the program was shaken by a flood of applications for larger import allowances, or for new allowances for companies that had none.

The decision on these applications was postponed while the program was reexamined and the forthcoming mandatory controls are the result.

The new controls, it is understood, will not cover all oil products, but most.

Asphalt, not regulated now, is considered less likely to be regulated than residual oil. However, the report to the President was described as broad enough to cover both products.

It has been reported that the new program will make special provision for Canadian oil, though not the exception that Canada would like.

Canada has argued, vigorously, that her oil will be just as available to a United States war effort as Texas oil; not dependent on ocean shipping that could be cut off by enemy action.

VENEZUELA PROBLEM

The U.S. Government feels that, however sound the Canadian argument might be, it is not practical to except one hemisphere ally and not another—Venezuela in this case.

Under the new program, it is understood that the Government plans to make special allowances for a certain amount of oil to be imported into the north central region of this country. That oil comes from Canada. Thus, the special provision is a bow in Canada's direction.

Aside from this, the basic formula for the new controls turns on the amount of refining activity that an importing company did during 6 months, March through August, of last year.

Corn, Corn, Corn

EXTENSION OF REMARKS
OF
HON. LAWRENCE BROCK
OF NEBRASKA
IN THE HOUSE OF REPRESENTATIVES
Monday, March 2, 1959

Mr. BROCK. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article appearing in the Lincoln Star, February 21, 1959, on corn production in the Midwest. We are all aware of the vast surplus of cereal grains at present but these storage bins will be molehills compared with the bushels and bushels that will be on hand as a result of the unrestricted number of acres a farmer may place in production as a result of Secretary of Agriculture Benson's recent announcement regarding controls:

CORN, CORN, CORN

(By William O. Dobler)

Chances are that you have never seen any corn compared to what you will see this summer in fields across Nebraska, Iowa, Illinois, and other States in the Midwest. Everything is pointing to corn yields in 1959 that will make past years look like the drought of the 1930's.

SOON COMES THE RECKONING

The situation is the brainstorm of Secretary of Agriculture Ezra Taft Benson. It is beyond us to figure out just what it is that Benson has in mind in connection with his farm program but its results could be disastrous for both the farmer and the country. The disaster is not likely to hit the farmer, at least the corn farmer, this year but it could catch him quick enough. What might well happen is a fantastic rise in the cost of the Federal Government's farm program.

It takes no brilliant economist to see what is happening today on the corn front. Farmers voted late last year to do away with acreage controls and high, rigid price supports. They asked, instead, for lower supports and freedom to plant at will. The latter program is the one to be followed this summer.

It has just been announced that support prices on the 1959 crop will be $1.12 per bushel, 9 cents per bushel higher than it was last year on noncompliance corn and about 20 cents per bushel lower than it was on corn grown under acreage controls. Ironically, the change in support price will cause all farmers to boost production to its physical limit.

The grower last year who was getting only $1.03 on noncompliance corn will see a bigger profit this year in added production. The man who got $1.32 last year on corn grown in compliance will see that he is forced to grow more this year in order to make as much as he did last year. His profit will be found in volume.

Thus, whatever a farmer got last year, he has a good reason for growing more corn this year. And grow it he will unless weather conditions take an unexpected hand in things. And even the weather is getting to be less and less of a factor. A speaker in Lincoln this week noted that there are now some 2.5 million acres of land in Nebraska under irrigation by either dams and diversion channels or deep wells.

Nebraska is rapidly becoming an ever-normal grain belt wherein rainfall is a relatively unimportant thing from year to year. So long as there is sufficient moisture during a total period of 10 or 15 years, there will be guaranteed moisture during any single year by the process of open storage and pumping from underground supplies.

With such a vast supply of corn as is likely to be poured upon the market this year, the Government might well end up with a corner on the corn business. The regular market will be unable to absorb a great part of the 1959 crop. The Government, then, will fall heir to this surplus—adding it to the stockpile now in Government storage across the land.

ALL POINTED TO MORE CORN

Benson talks about a free enterprise system in agriculture but what he seems headed for is nationalization of agriculture in crop production. It is simply impossible to understand how Benson figures his program will work. To further complicate the picture, he has announced support prices for other grains generally lower than they were for 1958. This will tend to drive farmers away from these grains and into corn production. In addition to the jump in costs to the Government that this program will bring about, there will be many storage and transportation problems.

Some farmers were faced last year with no place for their new crop because the Government failed to pick up the 1957 crop that was in storage under Government loan. Any way you want to look at it, the corn program this year promises to bring on nothing but headaches. And the farmers, in the future, are likely to pay dearly for today's mistakes.

Medical Care for Aged

EXTENSION OF REMARKS
OF
HON. MERWIN COAD
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 18, 1959

Mr. COAD. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD I submit the following editorial from the February 27, issue of the Des Moines Register which sets forth a new program of low-cost medical insurance for persons over 65 who find it a hardship to pay medical bills.

Proposed by the Iowa State Medical Society this program was presented to the Iowa delegation of Senators and Representatives here in Washington today by officials of the society. I am sure that we are all aware of the growing numbers of senior citizens in America today. Our life span has been steadily lengthened through the miracles of modern medicine. But this too has its problems. One big problem is medical care since the incidence of sickness increases with age. A higher rate of sickness coupled with higher costs of improved medical care indeed creates a grave problem for our elders which should concern us all.

The editorial follows:

[From the Des Moines Register, February 27, 1959]

MEDICAL CARE FOR AGED

The Iowa State Medical Society deserves congratulations for its new program of low cost medical insurance for persons over 65 who find it a hardship to pay medical bills.

The society is taking the lead in attempting to solve one of the country's most vital health problems. The plan calls for some financial sacrifice on the part of doctors. It's an experiment which, if successful in Iowa, probably would be adopted in many other States.

The plan was approved Sunday at a special meeting of the house of delegates of the medical society. Some details remain to be worked out, but the program is expected to be put into effect by April.

The insurance will be written by Blue Shield, the nonprofit insurance plan of the medical society, and will be available to persons over 65 years of age. If the combined income of a man and his wife is less than $3,000 a year, the couple will be entitled to full-service coverage. An individual can qualify if his income is under $2,000.

The cost to the insured will be about $2.25 to $2.75 per person per month. Income from insurance charges would not be sufficient to pay in full the medical fees which doctors ordinarily charge. So the doctors will accept lower fees to be set by Blue Shield. The fees are expected to cover only overhead costs.

Blue Shield is working with Blue Cross to provide insurance which will cover both hospital and doctor expenses for the elderly at a cost of $6.50 to $7 a person a month. Blue Cross insurance, sponsored by the Iowa Hospital Association, covers hospital costs.

The elderly, who have retired from jobs that paid them a regular income, have less ability to pay medical and hospital expenses than people of working age. But they are more likely to incur heavy medical expenses. It's tragic if they don't get medical care because they can't afford it or if they are forced to become charity patients.

It is estimated that 210,000 of the 300,000 Iowans over 65 years of age will be eligible to take part in the new Blue Shield program. A high percentage of them now have no protection against heavy medical and hospital costs that may come at any time. A 1957 survey made by the National Opinion Research Center of the University of Chicago showed that nationally five out of every eight persons 65 and over had no health insurance protection.

A nation as prosperous as the United States, with highly skilled medical doctors and splendid hospitals, will not just "do nothing" about the problem of health care for its senior citizens in low income brackets.

Unless programs of the kind the Iowa society plans can be made truly effective, the Government will sooner or later take over the problem in response to general public demand. This is what the American Medical Association fears and why it recommended last December that doctors reduce fees to persons over 65 who have low incomes.

The A.M.A. is bitterly opposed to the Forand bill in Congress. This calls for the Government to provide free hospital, surgical and nursing home insurance for everyone eligible for social security benefits. It would cost $835 million a year. The A.M.A. fears it would lead to free health care for everyone and Government control of medicine.

The Iowa society is taking the best way to fight socialized medicine. It recognizes the gravity of the problem of providing health care to the elderly at costs they can afford and is attempting to do something about this.

South Names 14 More to Living Hall of Fame

EXTENSION OF REMARKS
OF
HON. JAMES C. DAVIS
OF GEORGIA
IN THE HOUSE OF REPRESENTATIVES
Monday, February 2, 1959

Mr. DAVIS of Georgia. Mr. Speaker, an interesting item appeared in the business section of the Atlanta Journal-Constitution on February 15, 1959. I should like to bring it to the attention of the readers of the RECORD. The news item concerns the latest additions to the South's Hall of Fame for the Living. The naming of the South's Hall of Fame for men and women is sponsored by a monthly publication called Dixie Business, edited by Mr. Hubert F. Lee, of Decatur, Ga.

From the ranks of the South's Hall of Fame, the man or woman of the South is elected each year by the editors of the magazine, together with its readers and friends.

Under unanimous consent of the House previously granted, I therefore take pleasure in inserting this clipping herewith:

SOUTH NAMES 14 MORE TO LIVING HALL OF FAME

Fourteen leading southerners have been named to the South's Hall of Fame for the Living, an honor group from which the Man of the South is elected each year. The nominations were announced by Hubert F.

Lee, editor of Dixie Business, the sponsoring magazine.

The group is limited to 200 living southerners. The 1959 additions include:

Dr. O. C. Aderhold, president, University of Georgia, Athens, Ga.; Harllee Branch, Jr., Atlanta, president, The Southern Co.; David Tennant Bryan, Richmond, publisher, Richmond Times-Dispatch, News Leader; Norman Cocke, Charlotte, chairman, board of trustees, Duke University; H. McKinley Conway, Jr., Atlanta, publisher, Manufacturers Record; Mr. Ralph Draughon, president, Alabama Polytechnic Institute, Auburn, Ala.; Ben S. Gilmer, Atlanta, president, Southern Bell Telephone Co.; Clarence Haverty, Atlanta, chairman, Haverty Furniture Companies; George M. Ivey, Sr., Charlotte, president, J. B. Ivey & Co.; Dr. James A. Jones, Richmond, president, Union Theological Seminary; Ben M McKelway, Washington, D.C., editor, the Washington Star and president of the Associated Press; Dr. John L. Plyler, president of Furman University, Greenville, S.C.; Dr. Clarence Poe, Raleigh, editor, the Progressive Farmer; Nelson Poynter, publisher, the St. Petersburg (Fla.) Times.

How We Should Arm To Meet the Soviet Menace

EXTENSION OF REMARKS

OF

HON. LEONARD G. WOLF

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Monday, March 2, 1959

Mr. WOLF. Mr. Speaker, I commend to the attention of every Member of this body who has not already read it excerpts from a recent speech delivered at Charleston, S.C., by Adm. Arleigh A. Burke, Chief of Naval Operations. The Washington Sunday Star on March 1 did a real service to the American people by carrying excerpts from Admiral Burke's speech which urge a reappraisal of our entire national posture—military, economic, and morale. It affirms the point I was trying to make when I testified before the House Armed Services Committee on January 29 in connection with the extension of the draft. I urged a complete study of our military manpower requirements, to determine whether the draft is the best possible way to meet our responsibilities and to overcome the Soviet challenge. Admiral Burke goes even further and urges a review of every line of our national human endeavor to see whether we are now measuring up and whether we will continue to measure up to the challenges presented to us by Communist competition.

The article follows:

ADMIRAL BURKE SPEAKS OUT—HOW WE SHOULD ARM TO MEET THE SOVIET MENACE

How the United States should expend its money and energy to make the strongest possible defense in the face of Soviet threats has been a lively controversy in Washington for a long time. Most of the criticism has originated at the Capitol.

Last week two high officials spoke out on the problem. The first was Adm. Arleigh A. Burke, Chief of Naval Operations, in a speech at Charleston, S.C.

The second was President Eisenhower who stressed the need for balance in remarks at his press conference and cited Admiral Burke's speech on the same subject as "indeed good." This is the text of the parts of the admiral's speech dealing with the subject:

"We must make sure that Russia knows we have enough to destroy the Soviet Union, and that we will use it if she launches a nuclear attack.

"There is no point trying to equate our requirements and capabilities with the enemy's. Our requirements are entirely different and our capabilities must be developed around our own needs. We do not need to engage in an endless arms race with the Soviets in ballistic missiles, any more than we have attempted to race them in numbers of submarines or army divisions.

"The really important thing about a deterrent force is not numbers but invulnerability, not total numbers built, but numbers we will be able to use. In making our retaliatory forces secure from enemy attack, we do not need great numbers of missiles and bombers.

"Whether the U.S.S.R. has one-half or as many or several times as many missiles as the United States, is really academic as long as we have the assured capability of destroying Russia, and as long as the Soviets know it, and are really convinced of it.

"There is, in fact, far greater psychological advantage for the United States in having this capability than in allowing ourselves to be drawn into a fruitless and unnecessary race on Soviet terms."

THE ELEMENT OF SECRECY

"Hiding behind the Iron Curtain the Kremlin can tell us what they want us to know, and they are able to conceal fairly effectively that which they don't want us to know.

"If they had a particular capability, would they make such statements as to cause us to build an appropriate response to that particular threat?

"If the Kremlin really intends to exploit an advantage, would it not be better for them to remain quiet and surprise us with deeds rather than words?

"The United States is embarked upon a defense program aimed at meeting our security needs. By not entering a numbers race with the Soviets on their terms, we also avoid the limitless economic drain which such a race would involve.

"We can afford what we have to afford for U.S. security, but also we must spend our funds for what we need. We must apportion our funds carefully to meet all the contingencies facing us.

"A general nuclear war deterrent will deter mainly that, little else. Our powerful retaliatory capability has not always deterred lesser assaults in the past, and it will not in the future."

PRECISION FORCES

"We know that the Soviet expansionist policy is continuing. There have been local aggressions, local uprisings, local crises in the past, which could not be dealt with by the use of mass destruction capabilities.

"These will continue to face us in the future, and we will be able to deal with them effectively only by measures which fit the local circumstances.

"This means controlled, precision forces which can be operated with discrimination and finesse, forces armed with conventional weapons and small atomic weapons, forces which can apply the right degree of power with pinpoint accuracy.

"Our military requirements cover a very wide spectrum of possible situations. But even this is not enough. Military measures, by themselves, are not enough.

"Let us look for a moment at what the Communists themselves have been telling us.

"We can debate at length among ourselves on what proper military measures to take in our own defenses. We can discuss budgets, military posture, and the various forms of modern warfare. We can examine our weapons systems, and our progress in research and development.

"But we can lose the entire stamina and integrity of our civilization if we do not recognize the challenge presented to us by a nation sworn to take us over.

"Distinguished American visitors to the Soviet Union in recent weeks have told me that the most dangerous thing they saw in Russia is the look on the faces of the people.

"What Americans have seen in their visits to Russia is the grim look of determination, the cool and deliberate confidence of people who are going places, who know they are missing a lot of life, who know they are being forced to sacrifice both tangible and intangible human values, but who are resolute in their aim to beat the United States in everything."

SOVIET PEOPLE SEEK PRESTIGE

"And what do they expect to gain by this? Simply this, they expect to gain prestige in the eyes of the rest of the world. They expect to gain greater respectability in the world. They expect to demonstrate that their way is the way of the future. How better can they prove all this than by beating the United States in everything—in athletics, in the arts, in scientific achievement, in industry, political maneuver, and everything else.

"This is the challenge which faces the United States. The Soviets have not said they were going to take the world through general nuclear war. What they have said is that communism is the wave of the future, and will make over the world.

"Fifteen years ago we thought the Soviet Union would build a massive force of long-range aircraft. They certainly had the capability of doing it. But they did not build many.

"Two years ago we were given a jolt with their unveiling of a new and powerful long-range jet bomber, the Bison. But the Soviets did not build many of these either.

"Today their space achievements are impressive. Their objective is twofold. First they want to be really able to develop the military capability which is implied by such achievements. They need not necessarily do it, but they want to be able to do so if they think they have to.

"Their second objective is to demonstrate to the world the technological proficiency of the U.S.S.R.; they want to show the world that they can do it.

"Both of these have their roots in Soviet psychological pressure on us, on our allies, and on the rest of the world, both within and outside the Sino-Soviet bloc."

DANGER OF PREOCCUPATION

"We fall into their mousetrap when we ourselves become so obsessed or preoccupied with these worthy accomplishments as to ignore all the other things they are doing to undermine freedom, to upset the stability of independent nations, and to insinuate their philosophy into the thinking of free men everywhere.

"Let us not underestimate the capabilities of the Soviets. Their scientific achievements along certain lines have been superior. But let this not blind us to all the other much less spectacular things they are doing, the many little, devious, conspiratorial inroads they are making everywhere.

"We have many problems before us in facing up to this Communist challenge. We must not become enchanted with the prospects of military power in the space age at the expense of the many other demands upon us. The competition covers a far wider range of effort than military effort alone. The range now extends to include everybody, not just the military.

"Our country has grown strong in an environment of personal liberty in which the

spirit of competition runs strong among us. The United States has become a world leader as a result of the effort of many hard-working people to whom the concepts of private enterprise and individual initiative have real meaning.

"But today we run the grave risk of becoming complacent in our position of world leadership, and of becoming indifferent to the hard realities of the competition we face as a nation."

THE CHALLENGE WE FACE

"This is the challenge which faces the entire Nation today. It is the challenge of facing Communist competition in every line of human endeavor. It is a challenge which will not be met with slogans, gimmicks and simple answers.

"It is a challenge which summons all Americans once again to reaffirm our purpose in the world community of nations, and to pursue that purpose with vigor, and not be deflected by the cold winds of communism.

"Let us take a hard look at what is happening in the world, a hard look at what is happening to our markets in the world, and let us look at the Soviet economic offensive and determine how well we are responding to it.

"Let us take a hard look at what we need in military hardware.

"The answers will not be found in mathematical equations or with master-stroke answers. We are talking about the whole spectrum of human endeavor, for which there is not single or simple formula.

"The United States is ahead today, but we will stay ahead only by the dint of hard work, by higher standards of individual achievement, by the exercise of free initiative and by placing our personal comforts and interests second to the interests of a strong, virile and dynamic United States.

"This is not a one-man job. It is not a 100-man job, nor a job only for a million men. It is a challenge to 170 million Americans. It is a job for you and for me, for all of us, for your children, and your children's children, for as long as they live they will live in competition."

Federal Minimum Benefit Standards

EXTENSION OF REMARKS

OF

HON. HOMER THORNBERRY

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 18, 1959

Mr. THORNBERRY. Mr. Speaker, under clause 4 of rule XXII of the House of Representatives, I respectfully submit the attached resolution adopted by the Senate of the State of Texas, expressing opposition to legislation which would establish Federal minimum benefit standards and which would compel the States to take similar action:

SENATE RESOLUTION 112

Whereas there is unemployment compensation pending in the Congress of the United States, which legislation seeks to establish certain minimum benefit standards and would thereby remove from the States many of the powers now vested therein, which legislation is coercive upon the legislatures of the various States in that if they fail to comply with the proposed standards, drastic penalties would be imposed upon the taxpayers in such States; and

Whereas the Legislature of the State of Texas recently, in recognition of unemployment problems, increased the maximum weekly benefit amount by 40 percent, and is even now in the current session considering legislation which would provide further increases; and

Whereas the people of Texas are firmly dedicated to the proposition that matters relating to the amount and duration of unemployment benefits should be left to the discretion of the various State governments due to the widely varying economic and other conditions that prevail among the States: Now, therefore, be it

Resolved by the Senate of the State of Texas, That it opposes legislation which would establish Federal minimum benefit standards and which would compel the States to take similar action, thus depriving the legislature of its rightful authority in such matters; and be it further

Resolved, That a copy of this resolution be sent to the President of the United States, the Secretary of Labor of the United States, Senate Majority Leader Lyndon B. Johnson, Senator Ralph W. Yarborough, Speaker Sam Rayburn, and all members of the House of Representatives from Texas.

BEN RAMSEY,
President of the Senate.

I hereby certify that the above resolution was adopted by the Senate on February 23, 1959.

CHARLES SCHNABEL,
Secretary of the Senate.

Law for Outer Space Needed

EXTENSION OF REMARKS

OF

HON. LEONARD G. WOLF

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Monday, March 2, 1959

Mr. WOLF. Mr. Speaker, the Des Moines Register of December 28, 1958, carried an excellent editorial pointing up the urgent need for the adoption through international agreements of space laws to settle questions of ownership and to govern traffic in outer space. The Des Moines Register is to be commended for its far-sightedness in this connection. The editorial, which follows, is even more timely today than when it was written 6 weeks ago:

LAW FOR OUTER SPACE NEEDED

Who owns outer space? Who makes the law there? Since sputnik, these are no longer theoretical questions but highly practical ones.

Sputnik, by circling the globe in less than 2 hours, and traversing practically every country in the world repeatedly, vaporized the early hypothesis that each nation owned and had jurisdiction over its airspace—at least as high as man made devices could fly.

Long-distance missiles, meanwhile, vaporized the other chief hypothesis, that the higher air (and nonair) was like the high seas—open to all as a matter of right.

Bright young law students have been filling the law journals with ideas on the subject, and responsible statesmen and scientists have been prayerfully considering it.

A staff report for the Committee on Astronautics and Space Exploration of the U.S. House of Representatives recently called for advance notice of flight plans of satellites and missiles so they would not be mistaken for a hostile missile attack and trigger an accidental war.

The staff report discussed the legal theories advanced so far and urged creating some space law by international agreement. It suggested starting cautiously with the most pressing problems: restriction to peaceful uses; defining that term carefully; settling the liability for reentry accidents and the ownership of reentering spacecraft.

President Eisenhower's recorded peace message from the 4-ton Atlas satellite is a dramatic reminder of the U.S. Government's willingness to get started.

Century 21 Exposition

EXTENSION OF REMARKS

OF

HON. DON MAGNUSON

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 29, 1959

Mr. MAGNUSON. Mr. Speaker, in May of 1961 an international exposition of great importance to the world will open in Seattle, Wash. This exposition is being called the Century 21 Exposition because it will be a showcase of how the scientific knowledge of today, developed by free men within the framework of democratic forms of government, will give us a better world during the next century.

Pursuant to provisions of law passed by the 85th Congress, the Department of Commerce currently is working with other agencies of the Federal Government in an investigation of the ways in which the United States can put its best foot forward in its participation in this significant exposition.

The United States had during recent years displayed its scientific and industrial accomplishments at various shows and fairs throughout the world. The Century 21 Exposition will be an opportunity for our own people as well as those in other parts of the world to see what we are accomplishing in the field of science and industrial development.

Under leave to extend my remarks in the RECORD, I should like to insert a recent story from the New York Times which outlines how some of the leading scientists in the country are participating in the planning for this exposition.

SCIENTIST TO AID FAIR IN SEATTLE—CENTURY 21 EXPOSITION SET TO OPEN IN MAY 1961—SOVIET TO PARTICIPATE

(By Lawrence E. Davies)

SEATTLE.—A group of leaders in American science has agreed to come here next month to help develop plans for a world fair—the Century 21 Exposition. It is to open in Seattle in May, 1961, and is scheduled for a second year's run in 1962.

Major emphasis is to be placed on science and its relationship to the development of man. The unity of science among nations is to be demonstrated through the expected participation of the Soviet Union, Italy, Japan, and many other countries.

The fair has been in the initial planning stage since 1955. Seattle and Washington State have made a total of $15 million available as a starter.

The scientific theme evolved through a visit to Washington by exposition officials last February. They found science leaders

in the East casting about for a means of putting on a science exposition in 1961.

That was the first year in which results of the International Geophysical Year, now in progress, could be dramatized, said Ewen C. Dingwall, vice president and general manager of the World Fair Corporation.

PLANNING BOARD FORMED

The result has been the setting up of a national science planning board of twenty members.

"Our aim is a compact, high quality show," Mr. Dingwall asserted. "We have the opportunity to do a very significant job of the type that never has been done before. It is true there is a science pavilion at the Brussels world's fair—a first effort—but we should capitalize on its errors and do a better job in Seattle."

He and James Faber, the fair's publicity manager, noted that many millions of dollars were to be gambled on the belief that science is box office. The job ahead, they added, was providing an educational show that is entertaining.

The Stanford Research Institute has estimated that the exposition will draw 8 million to 12 million visitors from May to September, 1961. A second year, it says, would attract 4 million to 6 million persons.

A 74-acre site in the vicinity of the Seattle Civic Auditorium has been chosen for the exposition. Land around the auditorium willl be cleared of buildings, mostly dwellings. The shell of the auditorium will provide a nucleus for construction of a 3,000-seat concert hall with a sixty-foot stage. At least one permanent state buildings, perhaps a combined convention hall and sports center, is to be erected.

Negotiations are under way for construction of a five-mile suspended rail system to carry fair visitors to and from the site to defeat the parking problem.

Besides providing opportunity for the world of science to answer the question, "Where is science going during the next hundred years?" the exposition is to embrace a Pan-Pacific section. Seattle does the bulk of its export trade with nations rimming the Pacific Ocean.

MUSIC FESTIVALS SOUGHT

Committees are going to work to bid for international music festivals and art events for the exposition period, as well as to try to develop a significant sports calendar.

Despite the science theme underlying the fair, 1961 was selected in the first place partly to commemorate the 100th anniversary of the final fixing of the United States-Canadian border. The World Fair Commission notes that the final monument of the border was put in place in 1861 at Point Roberts, Wash., "thus creating the longest unfortified frontier."

The exposition also will feature the University of Washington's centennial year and give recognition to Alaska statehood.

Members of the national science planning board for the fair are:

Dr. Frederick Seitz, University, of Illinois; Dr. Detlev W. Bronk, president; Dr. Paul Weiss of the Rockefeller Institution; Dr. Leonard Carmichael, secretary of the Smithsonian Institution; Dr. Harold J. Coolidge of the National Academy of Sciences; Dr. Frank Fremont-Smith, medical director of the Josiah Macy Jr. Foundation; Dr. Harry F. Harlow of the University of Wisconsin; Dr. Donald Loughridge of General Motors Technical Center; Dr. Donald H. McLaughlin of Homestake Mining Company; Dr. Donald H. Menzel, director of Harvard Observatory; Dr. J. C. Morris, vice president of Tulane University; Dr. Hans Neurath of the University of Washington; Dr. Gerard Piel, president and publisher of the Scientific American; Dr. Froelich Rainey, director of the University of Pennsylvania Museum; Dr. Henry Bradford Washburn Jr., director of the Boston Museum of Science; Dr. Dael Wolfle, executive officer of the American Association for the Advancement of Science; D. V. Astin, director, National Bureau of Standards, and Dr. Homer Newell, National Aeronautics and Space Administration, Dr. Glenn T. Seaborg of the University of California, and Dr. Herman F. Marck, Polymer Research Institute.

Taxpayers' Revolt

EXTENSION OF REMARKS
OF
HON. RUSSELL V. MACK
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES
Monday, March 2, 1959

Mr. MACK of Washington. Mr. Speaker, a long predicted and long overdue taxpayers' revolt against excessive Government spending and high taxes has started in the State of Washington.

Tens of thousands of Washington State citizens are signing petitions and writing letters to State legislators and Members of Congress urging less spending on new programs and demanding that these legislators "hold the line against increasing Government expenditures" and refrain from levying any new and additional State or Federal taxes.

Washington State's two U.S. Senators are quoted in the press as saying that each of them already has received petitions or letters from Washington State bearing more than 1,000 signatures.

The Aberdeen World of Aberdeen, Wash., in my home county—population 55,000—reports leaders of the taxpayers' revolt claim they will obtain petitions or letters to Congressmen and State legislators bearing at least 5,000 signatures.

I received 344 taxpayers' revolt letters from my own county Monday morning and the drive there for a curb on extravagant governmental spending appears to be only at its beginning.

This taxpayers' revolt, newspapers report, is nonpartisan and has the endorsement of leaders in both political parties.

The petitions bear the following heading:

A renewed declaration of independence to the Governor, State of Washington:

We, the undersigned citizens, knowing that the power to tax is the power to destroy, and believing that man is best governed who is least governed, and that government should be held to the same financial responsibility as that to which we are held—namely, to live within its means—do hereby pledge that we shall not require more services of our Government than such as are already being rendered.

We therefore demand that no increased taxes be enacted and that Government, both State and Federal, confine their expenditures to existing sources and limits of revenue.

We further declare that any elected representative of the people who does not subscribe to these views is not worthy of our support at the polls.

Other petitions are addressed to Members of Congress and to State legislators.

Signers of the petitions are following up their petition signing by writing letters to Members of Congress and to State legislators. A typical letter of this kind follows:

I have signed a petition addressed to the Governor, our representatives in the National Congress and our State representatives, in which I have pledged that I will not request any increased governmental services and demanding that no increased taxes of any kind be levied.

You will shortly receive this petition, which it is expected will have the signatures of at least 5,000 citizens of Grays Harbor County, Wash., most of whom will write you a similar letter.

This position is endorsed by leaders and members of both political parties.

I urge that you exert every effort to prevent any additional taxation whatsoever.

Here is a taxpayers' revolt that may become nationwide. If it does become nationwide, it may contribute greatly to Congress and State legislatures obtaining balanced budgets this year.

If the revolting taxpayers accomplish that goal, they will put a brake on the continued rising prices of inflation which are reducing the living standards of millions of American citizens, especially pensioners, retired persons, and others who are on fixed incomes.

Dr. Godfrey Lowell Cabot

EXTENSION OF REMARKS
OF
HON. CHARLES O. PORTER
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Monday, March 2, 1959

Mr. PORTER. Mr. Speaker, I would like publicly to congratulate Dr. Godfrey L. Cabot of 242 Beacon Street, Boston, Mass., on the occasion of his 98th birthday on February 26, 1959.

Dr. Cabot is a businessman, a philanthropist, and a citizen who all his life has devoted himself to public service and better government.

Graduating with high honors from Harvard in 1882, Dr. Cabot undertook graduate study in geology and then established the highly successful Godfrey L. Cabot, Inc., in Boston with branches in many parts of the country.

One of his lifetime special interests has been aviation. Dr. Cabot learned to fly at the age of 55, an age when many men are thinking of retiring, by winning his Navy wings at Pensacola in 1918. He then completed a successful experiment of picking up cargo from the water in a moving plane, much to the astonishment of authorities in the Navy Department who were less than enthusiastic, at that time, about aviation. Subsequently, Dr. Cabot has been president of the National Aeronautical Association; one of the original directors of the Aviation Research Foundation, and remains honorary president of the Federation Aeronautique Internationale (FAI) which keeps the official worldwide records for aviation achievements by all countries.

Dr. Cabot in his 90's retains a modern view of the great future possibilities for aviation and in a recent letter to Professor Langdon P. Marvin, Jr., he made this prophecy:

I predict that the time will come when the freight traffic through the air will greatly

exceed passenger traffic through the air, and the receipts for carrying their goods through the air will be greater than for carrying passengers through the air. I predict that the time will come when the passenger and freight traffic through the air will be to a great extent separated, and most of the freight carried by planes that are built specially for that purpose.

It is a source of inspiration to all of us to contemplate the active intelligence of Dr. Cabot, and his many friends join with me in wishing congratulations on his 98th birthday and best wishes for many more birthdays to come.

Mr. Speaker, I ask unanimous consent to insert a letter from the President to Dr. Cabot and join in the President's congratulations:

THE WHITE HOUSE, *February 24, 1958.*
DOCTOR GODFREY L. CABOT,
Boston, Mass.

DEAR DR. CABOT: I am reminded that February 26 brings around your 97th birthday anniversary. I am sure that as you look back upon America's tremendous progress during your lifetime you have the same feeling of pride as do I, and I hope that you will share in the immense possibilities that seem to be just around the corner for us—and for all peoples.

From my friends I know that you are as keen an observor of the passing scene as ever, and I do hope that I shall have the privilege of sending you my warmest felicitations, as I do now, for many future years.

With best wishes and warm regard,

Sincerely,

DWIGHT D. EISENHOWER.

Congress Should Quiz the Court

EXTENSION OF REMARKS
OF
HON. ROBERT L. F. SIKES
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 5, 1959

Mr. SIKES. Mr. Speaker, I want to call the attention of my colleagues to an article which appeared in the Richmond Times-Dispatch, written by Ross Valentine, and which was reprinted in the February 23, 1959, issue of the Florida Times-Union. The article entitled "Congress Should Quiz the Court" follows:

[Reprinted in Florida Times-Union, Feb. 23, 1959]

CONGRESS SHOULD QUIZ THE COURT

(By Ross Valentine, in Richmond Times-Dispatch)

Love is blind. And that goes for those in love with the proposition—that equal education will not be equal, until one race is permitted to force its way into the schools of another.

To such as these the Supreme Court can do no wrong, though its dictum, pit race against race, North against South, and divide a Nation against itself.

But wrath, like hate, is also blind.

The Court's critics (including this one) at first saw in the Court's unanimous decision a political motive—i.e., appeasement of the Negro vote, a fractional minority wielding balance of power because of its concentration in big cities of electorally determinant States.

The absurdity of this suspicion became evident, however, after more dispassionate deliberation. It simply doesn't make sense. Life tenure protects the Court against the whims of political weather.

What, then could have been the reason for unanimity in so reckless a blunder? On an issue which, since the decision of 1896, had been settled, repeatedly affirmed, and considered valid, with no protest from any of the States, and no attempt by Congress to upset the principle of equal, but separate schools, in States where this was deemed best for all concerned.

There must have been a reason for this revolutionary reversal in the concept of the constitutional relationship between the States and the Central Government.

Does the Court expect the people to accept its Delphic decision on faith?

That attitude might be justified, if the clock could be turned back to the days of absolute monarchy, based on the premise that a divinely anointed king can do no wrong. But will freemen concede divine right to Frankfurter, Warren, et al?

The High Court is the creature of presidential prerogative. It will not be questioned by the White House.

It can be investigated, however, by the Congress, whose Members, collectively, personify the concept of consent of the governed.

Congress, if only because its function has been usurped by the judiciary, should consider itself dutybound to demand an explanation for usurpation of legislative power.

The Supreme Court, and the lower Federal courts do not represent the people. Their members are Presidentially handipicked to conform to political ideology. Surely, the inexcusable elevation of the utterly inexperienced Mr. Warren to Chief Justice—the world's most powerful position on the sunny side of the Iron Curtain, is a case in point.

None but the ignorant, superstitious, timid or the servile will attribute to the nine Justices the quality of infallibility and omnipotence. Yet the members of that Supreme Bench are entrenched for life, for all practical purposes. They cannot be removed except by impeachment, and then only if found guilty of a criminal charge, such as treason, murder, rape, arson, embezzlement or acceptance of bribes.

The Court's flouting of article X, was plainly a trespass on the legislative and amendatory powers vested solely in Congress and the people. But under the Constitution, this usurpation in no way renders the Justices liable to impeachment.

Our only recourse therefore rests in the House of Representatives which does represent the people, and in the Senate, which represents the several states.

Needless to say any proposal to investigate the Court's decision will be dismissed either as "naive," or damned as an unwarrantable intrusion on the "rights," powers and immunity of the judiciary. Only under totalitarianism are government officials considered immune.

Unless the people, via Congress, exercise their right of inquiry, the people will henceforth be defenseless in the face of future attempts at "judicial legislation."

Exposure of the Adams-Goldfine scandal by a congressional subcommittee was a dramatic example of the exercise of that power. The White House was not immune. Are the Justices to be granted greater powers of immunity than the President?

The Warren decision gave no valid reasons for violation of article X.

The fallacy and weakness of its reasoning was exposed by that fatal footnote—"and see, generally, Myrdal," the reference being to a book on civil rights of the Negro, written by staff members of the plaintiff NAACP, with the assistance of sundry leftwingers, and edited by a Swedish sociologist imported for the purpose, whose knowledge of American constitutional law may be comparable to Mr. Warren's.

Basing its opinion generally upon the findings of this foreign Socialist, the court ignored Article X—and distorted the 14th amendment to fit Myrdal's frankly Marxist theories.

The "constitutional philosophy" of Mr. Chief Justice Warren may be relegated to the realm of political myth—but this cannot be said of the dominant intellect on the high bench—Mr. Justice Frankfurter, who had formerly acted as counsel for the plaintiff NAACP, and may be presumed to have been partial to his former clients.

Unless we accept the humiliating assumption that the Court acted on sociological theory, the only alternative explanation for the decision is that the Frankfuter-Warren court considered the Constitution of the United States to have been superseded by the United Nations Charter, and therefore felt called upon to "interpret" the 14th amendment so as to coincide with "international policy" as set forth in the UN Charter and its UNESCO appendix.

Was this the reason the Supreme Court unanimously disregarded the constitutionally fixed limitations of the Federal Government?

The people of the United States—sorely bewildered in this crisis—have a right to an honest answer to that question—a question not answered in the Warren decision of May 1954.

One worlders may conceivably argue that judicial recognition of interdependence with other free world nations was long overdue—that the court's school decision was needed to implement Eisenhower-Dulles foreign policy and defeat Soviet propaganda among the colored multi-millions.

If this was, indeed, the reason for the court's revolutionary reversal of the established relationship between States and nation—then the people should be told frankly.

They should not be compelled to accept judicial revision of the Constitution simply because it is being touted as "the law of the land" by a noisy minority. The Court's members are not "supreme beings." They are, like all men, in or eur of office, fallible.

They are hired—and their salaries paid—by the taxpaying citizens.

The Court is not immune to interrogation by Congress.

Washington Impressed With Achievements of Julius Madey, a Clark, N.J., Boy Who Made Good

EXTENSION OF REMARKS
OF
HON. FLORENCE P. DWYER
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 11, 1959

Mrs. DWYER. Mr. Speaker, we have heard a great deal lately about the need for improving our educational system in the face of Soviet gains in scientific and engineering education.

We recognize, I believe, that in general we have not insisted upon the highest standards of excellence and achievement of which our young people are capable. We have failed in many instances to recognize talented boys and girls early enough to guide them into areas where their natural abilities and interests could best be developed.

In recent months, however, an unprecedented degree of public awareness of our educational deficiencies has been

growing. In response to this awareness, Congress last year passed the National Defense Education Act, a landmark in our educational history. And we are already beginning to reap the harvest of this farsighted legislation.

Similar developments are occurring at the State and local level throughout the country. Our people realize that we need good teachers, adequately paid, and good schools, adequately equipped, if we are to give our children the opportunity to make the most of their God-given abilities.

It is in this context of our increasing determination to improve our system of education, Mr. Speaker, that I call the attention of our colleagues to an example of the kind of talented and responsible young man our American system can produce at its best. I do so not in any spirit of complacency about past accomplishments, but in the hope that this one young man may serve as a model for the kind of excellence we should be producing more of.

Beyond this, however, I believe that Julius Madey of Clark, N.J., deserves recognition on his own merits.

Julius Madey is 18 years old. He graduated from Johnson Regional High School last year, and plans to enter Rutgers University next year to begin a 5-year course in medical electronics.

Despite his youth, he has made a remarkable record for himself—so remarkable, in fact, that he has just been awarded the 1958 Edison Radio Amateur Award for public service, a cherished honor he richly deserved.

Consider, for instance, that at his early age, Julius Madey has already been an important factor in the success of Operation Deepfreeze and of our International Geophysical Year research teams in the Antarctic; he has provided an essential channel of communication with American personnel at Arctic weather stations, at military bases in the Pacific and DEW line support bases in Alaska; and he has been a one-man good will mission to people throughout Europe.

The top national Edison Award was not the first recognition accorded young Madey. Previously, he had received a special citation from the Edison Award Committee as well as an Edison commendation certificate, and a public service award from the U.S. Navy. He also won student science fair honors several years ago for inventing an ultrasonic drill, and has excelled in oratorical and other academic activities.

Julius Madey received his award—a trophy and $500—at ceremonies held in Washington's Sheraton-Carlton Hotel on Thursday evening, February 26, 1959. It was one of the most impressive such ceremonies I have ever been privileged to witness.

More than 150 people were present for the dinner, including some of the top Government, military, and private communications officials and four Federal Communications Commissioners. Mr. L. Berkley Davis, chairman of the award committee, made the presentation on behalf of the General Electric Co., sponsors of the award. Mr. J. S. Parker, vice president of General Electric for employee and public relations, was master of ceremonies.

The principal speaker for the occasion was the Reverend Daniel Linehan, S. J., head of the geophysics department at Boston College and one of the best known geophysicists in the world. It seems that Father Linehan and Julius Madey were already well acquainted. When Father Linehan was in the Antarctic in connection with the International Geophysical Year, his plane crashed. It was through young Madey's radio station—K2KGJ, which he and his brother, John, 16, operate from their home in Clark—that Father Linehan was able to assure his family in the United States that he was uninjured.

The story of Julius Madey came from all these men and others. It is a story of tireless and selfless service to people. Despite a full high school schedule, he has manned his station up to 90 hours a that evening was a tape-recorded messages annually, both important official calls and personal messages between the men on the fringes of civilization and their families at home.

One of the most moving testimonials that evening wes a tape-recorded message made in the wastes of the Antarctic by a group of American servicemen and scientists for the express purpose of telling Julius on this great occasion how much his work and help has meant to them.

During the 1958 Christmas season, for example, he relayed for these isolated service personnel orders for more than $2,000 worth of flowers to be sent to their families in the United States.

Once, through his station, a young mother announced the birth of her child directly from her hospital bed to her husband near the South Pole.

Among the evidence submitted to the award committee was a personal letter of appreciation to Julius Madey from Rear Adm. George Dufek, Commander, U.S. Naval Support Force, Antarctica.

For hours at a time, Julius has been the sole contact between civilization and the men still pushing ahead the frontiers of scientific knowledge in some of the most desolate parts of the world.

But his service has been appreciated. The Edison Award judges—FCC Commissioner Rosel Hyde, E. Roland Harriman, chairman of the board of the American National Red Cross, and G. L. Dosland, president of the American Radio Relay League—chose him from among nearly 200,000 licensed radio amateurs to receive this coveted award.

In every sense of the word, Julius Madey was the star of the evening. He acknowledged his award in a 15-minute speech, which he delivered without notes, and which was a model of its kind. He was relaxed and gracious and genuinely modest. He held the entire room spellbound as he told his story and thanked all those who in the past have helped make his accomplishments possible.

Washington, Mr. Speaker, has seen many stars glitter for a while and quickly fade away. But this boy is the real thing. He is a credit to his family—who have obviously meant so much in his young life—to his schools and his community. He is an outstanding example to the youth of America—and to us, the adults—of the potential riches of talent and of personal service that exist in the youth of America, awaiting only the opportunity to grow and develop and be used for the welfare of our country and our people.

Clark Township and Union County would have been especially proud of Julius Madey that Thursday evening.

I certainly was.

A Malayan Exchange Fellow Looks at the Prospects for Asian Democracy

EXTENSION OF REMARKS
OF
HON. HENRY S. REUSS
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 24, 1959

Mr. REUSS. Mr. Speaker, the American Political Science Association, which for some years has enabled American political scientists and journalists to spend time on Capitol Hill in the offices of Congressmen and Senators, has this year broadened its program to include three young men from Asia. I have been fortunate in having with me since the session began Ahmad Roose, of the city of Kuala Lumpur, Malaya. Mr. Roose came for his months in Washington from his civil service post in the Ministry of the Interior and Justice of the Federation of Malaya.

Mr. Roose has participated in all the activities of my office: committee meetings, floor sessions, administrative work. He has been of great help to us, and has won the friendship of everyone he has met. I hope in return he can take with him next summer some case-studies of democracy in action. Mr. Roose believes deeply in democracy, but recognizes the difficulties it faces in many of the countries which have recently found national existence. He explores the question in a talk today sponsored by the department of government and arranged by Prof. Charles R. Foster, of the historic College of William and Mary in Williamsburg, Va. I believe that his remarks have meaning for our own policy in emerging areas. Successful political democracy, in the sense of responsible governments peacefully elected by a wide suffrage, may be long delayed. Lack of responsible opposition, apathy on the part of the voters, and impatience to get ahead economically—these factors, Mr. Roose points out, may make democracy elusive. Naturally, we would like nothing better than that the true political democracy of our own tradition became the heritage of mankind everywhere. But where emerging peoples have not yet attained it, is it not equally important that their governments be humane, and that they work in the direction of democracy?

I commend Mr. Roose's remarks to all who are interested in the problems of emerging peoples:

IS DEMOCRACY FEASIBLE IN ASIA?

The question posed above is a vital one as on its answer depends the fate of the

nations in Asia. The same question has in fact often been asked in many other ways, but the underlying factor is the same, and that is, whether or not the newly gained independence in some of the Asian countries will lead them to adopt democracy as the form of government, that is to say, the principle of popular elections to determine the government. There seems to be a consensus of opinions that, given time, education to reduce the high rate of illiteracy, and guidance, democracy will prevail in Asia in some form or other. Such democratic government system will, however, to some extent, differ from that found in the West and America. This is to be expected, considering that the development of the type of government will naturally be governed by the forces prevalent in any particular country.

Asians as a people have only known authoritarian rule, either foreign or domestic. Now most of them have loudly proclaimed their independence status and have accepted to some extent the principle of democracy. As such, democracy is a new notion. Before the two world wars, the principle of self-determination was never extended to the people living in Asia, as they were mostly governed by western colonial powers. However, the two world wars had changed this concept, and it is now believed that the principle of self-determination must also be extended to the Asians. This change in attitude may have arisen as a result of the general exhaustion of the western colonial powers as a result of the world wars; consequently, colonies no longer became an asset. They have in fact become increasingly more expensive and morally unjustified to maintain; in short, colonial territories are a great liability. So, in such circumstances, the inevitable was bound to happen. Britain, perhaps with foresight, took the initiative in granting independence for India in 1947, and so India became the first colonial territory to achieve independence. The grant of independence in this case was without bloodshed, and was of course urged on by the independence movement in India which began back in the 1930's. This was followed by Indonesia, the Philippines, Burma, and so on. The last of the Southeast Asian countries to join the fold of newly independent countries is Malaya, which received her new status in 1957. Thus we see that, apart from Japan, only the former colonial territories which have obtained their independence have proclaimed themselves to be democratic governments. Of course, it is a debatable point whether democracy, as it is understood in the West and here in America, will ever be successful in the short run, considering that the period of training for self-rule was relatively short. Under such circumstances one perhaps may be forgiven for thinking that democracy in southeast Asia is indeed a fragile plant, with an uncertain future and requires naturally a lot of attention and grooming before it comes to maturity. It must be remembered that there are far too many social, economic, and other factors which may prevent democracy from being practicable in Asia.

Democracy in this context is defined as a government by the people, for the people, and of the people; one in which the people is given the choice to elect the government, and the choice to change an unpopular one by balloting and not through violence. Now let us examine the factors which can contribute to make democracy practicable in Asia. In this connection, perhaps it is easier to discuss the question from another angle, and that is to examine the factors, nonexistent in Asia, which make democracy such a success in the west and in America.

One of the most important factors which is at the moment absent in all the countries of Asia is undoubtedly an effective, enlightened and responsible opposition party which will hold the government responsible for their actions. It is no exaggeration to say that in Asia there is no such responsible opposition. There are of course many political parties in direct opposition to the government, but they are not what I would call responsible opposition in the sense that they are not in the least trying to aid the government to become effective. Parties tend to become mere tools for some political leaders to come to power, and they are often involved in intrigues and shady tactics to bring down the government, so that they in turn can have the opportunity to make easy money. We have often heard the accusation of corruption leveled at some, if not all, of the recently established democratic governments in this area, and that the easiest way to make money is of course by being a member of a cabinet. This accusation may be true. But the question that one should ask is, why is there no effective opposition in spite of the presence of many political parties?

In the newly formed democracies of southeast Asia, the party system is not yet a healthy one. In the political atmosphere of Asia where the party system, as can be seen, is not functioning well; where parties prior to independence had little opportunity to develop or to perform the customary roles; and where a large majority of the masses is illiterate, it is hardly surprising that political parties are viewed with a rather jaundiced eye by the educated and economically well off. An independence movement is not the best breeding ground for political parties in the Western sense. In the search for unity in opposition to the colonial power, Asian nationalist movements exerted every effort to bring all factions together into one independence-bound organization, and there was a common slogan acceptable to all. Such slogans range from "freedom," "independence," or, as in Indonesia and Malaya, "Merdeka." After independence, as was natural, these movements tended to break down, as groups with minority views left the parent body to form new political groupings.

Asian political parties may be divided into four main groups: (a) The Nationalist Party (which is often the parent party), (b) the Communalist Party, (c) the Socialist Party, and lastly (d) the Communist Party. Besides these groupings there are other numerous political parties which are influential either at state level or regional level but not at national level, and also the innumerable so-called parties which center around individual leaders. This is partly caused by the absence of any clear divisions of political forces by long traditions or by differences on major policies. Therefore such break is due to conflicts of personality.

Communalism is one of the most powerful and most divisive forces in Asian life, but so far no "communal" party has had any success in national politics. What is the reason for the growth of communal parties? The answer is simple. Asia is a plural society with peoples of different races, customs, traditions and religious background living side by side. Communalism comes to the fore when foreign rule is withdrawn. Peoples who have more or less got along well with each other suddenly found old antagonisms toward neighbors of another race. For under foreign rules, some kind of neutrality could be imposed from above. If neither group ruled itself, it had not to worry about being ruled by its neighbors. But if these same neighbors were on the way to being the ruling class, then the prospect of being ruled by local foreign rulers becomes intolerable. Thus we saw how the Indian Muslims revolted against the Indian Hindus in India in 1947, the Sinhalese in Ceylon against the Tamils.

Now, under the circumstances, what is the possibility of the emergence of a responsible opposition? The possibility does not appear at all bright. There is apparently no common factor on which the various political parties could combine to form an opposition. Thus, neither the rightwing nor the leftwing parties, either separately or together, can become an effective opposition. If at all a coalition may be formed for other less complex purposes, such as to fight an election, but not because of common political ideals. However, this is not strictly true of Malaya.

Thus it is apparent that one of the most important components of democracy is lacking in Asia. However, I believe that in the long run, the emergence of an active opposition is certain, as the so-called leaders of the community may come to the realization that it would be better for everybody if they were to bury their differences and work for the nation as a whole. All that is required in this connection is, I think, a concerted effort to insure that the period of waiting for such an effective opposition is considerably shortened.

The other important factor necessary for democracy to be practicable is the presence of social consciousness, and the realization of their responsibility by the citizens. In the highly developed countries, social consciousness might, of course, be the result of the typical Western or American way of life, with its many kinds of public institutions, its public school system, its personal freedom vis-a-vis the security of the state. For instance, the British people believe that to aspire for political leadership, the personal character and the integrity of the aspirant must be aboveboard. This sort of consciousness is absent in Asia, where you often find that the so-called leaders of the community or party are more often than not the acknowledged failures in life. The thing that really bothers one is the fact that such men can and did win their elections to responsible positions either at State or even the national level. This is only possible due to the prevalent political apathy among a large majority of the people. Suitable and well-qualified candidates refuse to come forward to stand for elections, as they know full well the great responsibility that they, as leaders, would shoulder should they be elected. Consequently, political opportunists often come forward to fill the gap, and as there is no opposition (if any, it would be people of the same caliber), little choice is left for the electorate. Lack of suitable candidates for elections may be due to the absence of a leisure class. However, I do not believe that political apathy is the direct result solely of illiteracy of the masses. The voter turnout seems to be higher in the rural areas than in the urban. If this political apathy were to prevail for long, one fears that southeast Asia will get the kind of government which will by no means be democratic, but one which we dislike: authoritarian, short of communism.

Quite recently several Asian countries, namely Pakistan, Burma, and Thailand, in their despair have turned to authoritarian systems of government of one form or other. Burma is under what is called direct democracy, while it is guided democracy in Indonesia, and perhaps disciplined democracy in Thailand. It cannot be denied that this is an ominous trend. However, India, the biggest democracy on earth, is showing no signs of losing faith in its democratic ideals. Thus one can conclude that the feasibility of democracy in Asia is entirely dependent on the people's awareness of their responsibility. I have no doubt that the people of Asia have enough good sense to decide for their own betterment.

At present social consciousness is not entirely absent, but the degree of awareness is not encouraging enough for one to think that the chances of democracy to succeed are bright. To increase the awareness is by no

means formidable. But no one will deny that it will take a long time. Two things are required: education and time.

One can of course provide education and institutions which will foster the growth of social consciousness. But the process is necessarily a slow one. I admit, however, that we have not the time to do so considering the existence of other voices, the Communists, promising better things in quicker time than democracy can offer. The competition is therefore very stiff indeed and I think time is, in this case, not on our side.

Southern Regional Council

EXTENSION OF REMARKS
OF
HON. RICHARD BOLLING
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Monday, March 2, 1959

Mr. BOLLING. Mr. Speaker, a sense of fairness impels me to insert the following editorials from two respected southern papers. These editorials from the Richmond Times-Dispatch and the Chattanooga Times discuss certain attacks on the good name of the Southern Regional Council and deserve the careful attention of every fair-minded citizen regardless of his views:

[From the Richmond Times-Dispatch, Aug. 21, 1958]

A RACE AGENCY AND THE FACTS

Inaccurate statements as to its origins of the Southern Regional Council of Atlanta appeared recently in the Times-Dispatch, and should be corrected. They appeared—inadvertently, we are sure—in one of the series of articles by Edward B. Simmons, of the New Bedford (Mass.) Standard-Times, concerning Communist efforts to incite racial strife in the United States.

Mr. Simmons stated in the article appearing in our paper on August 5 that the Southern Regional Council, established in Atlanta in 1944 was an "offshoot of the old Southern Conference for Human Welfare, which was dissolved in 1948 after twice being described by the Federal Government as Communist front." He also said: "The Communist Daily Worker openly boasted that James E. Jackson, chief of the southern branch of the U.S. Communist Party, was a cofounder of the regional council."

Taking these two charges in order, the Southern Regional Council was not an offshoot of the Southern Conference for Human Welfare. It was established in response to an appear from respected southern Negro leaders, who met at Durham, N.C., in October 1942, on the call of Dr. Gordon B. Hancock, of the Virginia Union faculty here, and Dr. P. B. Young, of Norfolk, publisher of the Norfolk Journal and Guide. These Negro leaders did not ask for the elimination of segregation in the schools or anywhere else; they asked that separate but equal be made a reality.

Responding to their appeal, a group of white leaders met in Atlanta in the spring of 1943, and expressed a desire to cooperate. Out of this grew the Southern Regional Council. The council was the successor to the Commission on Interracial Cooperation, founded in 1919 by leading churchmen. To repeat, it not only was no offshoot of the Southern Conference for Human Welfare; it was criticized in some quarters because it was more conservative than that organization and suspected of being in competition with it.

We must remember, too, that when the Southern Conference for Human Welfare was established in 1938, it was not suspected of having any Communist connections, and many well intentioned and patriotic southerners participated in its early meetings. A number of these later joined the Southern Regional Council when they discovered the true purposes of the Conference for Human Welfare.

As to the allegation of the Communist Daily Workers that James E. Jackson, chief of the southern branch of the U.S. Communist Party, was a cofounder of the Southern Regional Council, there is nothing to support this.

A James E. Jackson is listed as having attended the Durham meeting of Negro leaders in October 1942, but is not mentioned by the Norfolk Journal and Guide as having been on the committee which drew up the statement then issued. Jackson did not participate in the meetings of white and Negro leaders in 1943 and 1944 which led to the establishment of the Southern Regional Council, and he was not at any time an officer, director, or member of that agency. The Daily Worker's statement that he was a founder is as unreliable and inaccurate as nearly everything else in that Communist sheet.

The late Dr. Howard W. Odum, noted and respected member of the University of North Carolina faculty, was the first president of the council. He was succeeded in 1945 by Paul D. Williams, prominent Catholic layman of Richmond and cofounder of the Catholic Committee of the South, who served until 1951. Mr. Williams was succeeded in that year by Marion A. Wright, South Carolina attoreny, former chairman of the South Carolina Library Board and past president of the University of South Carolina Alumni Association.

It should be emphasized that SRC worked within the framework of separate but equal for 7 years, and did not announce for integration until 1951.

While we disagree strongly and completely with its present position on this issue, we feel obligated to point out, in fairness, that it was in no sense Communist in its origins. The Southern Regional Council was established because of a sincere desire on the part of white and Negro leaders in the South to eliminate many of the disabilities and discriminations from which Negroes were suffering.

It was hoped that if these could be substantially lessened, the colored South would not look to the colored North for leadership. Insufficient progress was made, unfortunately, and the NAACP moved in and launched its drive for the complete elimination of segregation—sooner than it probably would have done if SRC's accomplishments had been larger.

That is where we stand today.

[From the Chattanoga (Tenn.) Times, Dec. 20, 1958]

MATTHEWS AND THE SRC

The Arkansas Legislative Council, concluding that a Communist plot is substantially responsible for the Little Rock desegregation crisis, has aired some charges so grossly unjust as to recall the McCarthyist nightmare.

There was J. B. Matthews, himself a former Communist-front leader, declaring that the Southern Regional Council had Red sympathizers in its ranks.

Just 20 years ago, Mr. Matthews was accusing Shirley Temple of aiding the Bolsheviks. The former chief counsel of the Dies committee is primarily remembered, however, for his July 1953 article in the American Mercury labeling "at least 7,000 Protestant clergymen" as "party members, fellow travelers, espionage agents, partyline adherents, and unwilling dupes." The protest, from President Eisenhower and others, was so strong that Senator Joe McCarthy, who by then had carried his campaign of vilification directly to the White House, was forced to fire Mathews, whom he had just hired as executive director of his subcommittee.

In the Little Rock hearings, other familiar names in the business of smear were trotted out. The Southern Regional Council was a frequent target, though no one dared go so far as to impugn its motives as a whole.

The SRC, as is well known, is made up of foremost southern educators, clergymen, business, labor, and professional leaders. A discussion and research group, it was organized in 1943, as a result of Negro leaders' efforts to see that the "separate but equal" doctrine in southern education be made a reality. It grew also out of the Commission on Interracial Cooperation, founded in 1919 by leading churchmen.

Since then it has favored gradual compliance with the Supreme Court's decision, but even so staunchly segregationist a newspaper as the Richmond Times-Dispatch recently said: "The Southern Regional Council was established because of a sincere desire on the part of white and Negro leaders in the South to eliminate many of the disabilities and discriminations from which Negroes were suffering."

Now the Arkansas Legislative Council, with never a peep about the role of its own Governor Faubus, concludes on the word of former Communists, who are professional name-callers, and others, most of them from out of the region, that little more than a Red plot is the cause of their difficulties.

A Statement on Pending Labor Legislation

EXTENSION OF REMARKS
OF
HON. ROBERT W. HEMPHILL
OF SOUTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Monday, March 2, 1959

Mr. HEMPHILL. Mr. Speaker, under leave to extend my remarks in the RECORD, I enclose a letter I received from the Lancaster, S.C., Chamber of Commerce, and while I do not necessarily agree with all their views, I am grateful that a group of men in my district are making such a fine study and are trying to be helpful to their Congressman in making decisions on these matters:

STATEMENT ON PENDING LABOR LEGISLATION PREPARED FOR MEMBERS OF THE SENATE LABOR AND PUBLIC WELFARE COMMITTEE AND THE HOUSE EDUCATION AND LABOR COMMITTEE

The legislative action committee of the Lancaster Chamber of Commerce has made a study of pending labor legislation and the recommendations of this committee have been approved by the board of directors.

Our members have been concerned, as has the rest of the Nation, about the revelations of the McClellan committee and we feel that some positive action should be taken by the Congress to protect the rights of union members, management, and honest union leaders.

We have studied the two primary bills now under consideration and prefer the administration bill, S. 748, over the Kennedy-Ervin bill, S. 505. The Kennedy-Ervin bill is a weak piece of legislation which we believe will not effectively deal with the corruption that has been uncovered in the organized labor movement. It also carries certain provisions which labor leaders say they must

have if they are to support the bill. We cannot see the necessity for bribing the public on this legislation. An antiracketeering measure is needed and the people should not have to bargain for it.

The administration bill, S. 748, comes nearer to an effective answer to this need. Provision is not made for bringing unions under antitrust laws or controlling the use of union funds for political purposes but the bill is otherwise an acceptable answer to the problem. S. 748 is already an example of compromise and we feel that it is the least that the American people can be asked to accept.

We are now at a turning point in the control of labor racketeering. Either something effective must be done this year or the racketeers will know that they have a clear field. The working men and women of this country deserve more than that.

Our committee is not able to study legislation in this field and obtain approval as fast as the various bills are being introduced.

However, we believe that S. 748 is a bill with which labor and management can both live and we urge the members of this committee to support this type of labor bill.

Respectfully submitted,

J. REECE FUNDERBURK, JR., D.D.S.
Chairman, Legislative Action Committee, Lancaster Chamber of Commerce, Lancaster, S.C.

Don't Kill the Goose

EXTENSION OF REMARKS
OF
HON. ALBERT H. BOSCH
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 18, 1959

Mr. BOSCH. Mr. Speaker, I commend to the attention of my colleagues the attched article from the March 9 issue of the U.S. News & World Report. This article in my opinion makes perfectly clear why we must not only talk about economy and fiscal responsibility but practice it as well:

"DON'T KILL THE GOOSE—"

(By David Lawrence)

The Government of the United States is a 52 percent partner in every American business.

Partners share the losses as well as the profits.

But the Government is a silent partner in private enterprise—it has to sit by while pressures of various kinds curtail or wipe out profits. Yet profits are necessary not only to furnish tax money to the Government but to replenish wornout tools and to pay the wages of the investors.

Nationwide labor unions lately have become the outspoken foe of bigger profits. Every time statistics are published showing that some companies in an industry are making somewhat larger profits than in the preceding year, union leaders demand higher wages. Unless these are granted, costly strikes ensue. This has little to do with whether the worker is going to produce more. The modern labor union doctrine holds that the worker is entitled to more wages, irrespective of efficiency or productivity.

But if this trend continues, where will the Government wind up?

Thus, in the current fiscal year, as a result of the business recession, the estimated tax receipts from the profits of corporations have gone down from $20.1 billion to $17 billion.

If labor unions insist that they have a right to a bigger and bigger share of the income of corporations, the Government will lose in two ways:

First, every wage expense is a deduction on which the Government suffers a 52-percent loss of revenue.

Second, the increased revenue from individual income taxes does not make up for all the losses suffered by the Treasury from a drop in corporation profits. In the current fiscal year, for instance, individual income tax receipts, as estimated by the Treasury, have gone up by $2.2 billion at the same time that the corporation taxes have declined by $3.1 billion.

The dependence of the Federal Treasury on the profits of business is not fully appreciated or realized throughout this country. President Eisenhower said on this point at his press conference last week:

"We shouldn't be so prone, I think, to talk about and decry profits in our economy.

"You must remember that the people now expect all sorts of services from the Federal Government, starting with that of national defense and go right on down to the last item that you want to find in the Department of Health, Education, and Welfare.

"We tax largely profits. We don't tax industrial activity as such—we tax profits. That is what the income tax is. So if you are trying to get profits down to zero, you are going to have to find some other way of finding Federal revenue, if we are going to this Government, I assure you."

America has achieved her greatest progress under the system of private initiative. Experience proves that Government operation of business projects is wasteful. Also, a big volume of tax dollars that would otherwise be collected is lost to the Treasury.

President Eisenhower has stated the issue plainly: How can there be appropriations for social welfare unless the Government takes in enouhg money from taxes to pay its bills? The President said last week in a speech to the U.S. Savings Bond Conference:

"Now, we have among us those who are calling for heavier and heavier expenditures, saying that these heavier expenditures on the part of the Federal Government would mean and, in effect, would cause, economic expansion. I cannot think of any doctrine or statement that is so false as this one. * * *

"When the Government spends more money than it is getting in the form of taxes, the Treasury must do just exactly what a family or a business would have to do, under similar circumstances: It must go out and borrow whatever is needed to finish paying the bills. When part of the borrowing it must undertake comes from commercial banks, the money supply is increased and the conditions are created for an inflationary price rise.

"Inflation weakens the economy. It brings serious hardships to those of our citizens who are living on pensions or other fixed incomes, and works against those who are unable to bargain effectively for higher wages. Most dangerous of all, inflation weakens the incentive to save. It gives rise to a fear that the dollar will continue to decline in value and that speculation will be the only way to keep ahead of the game."

What is the answer? It is to be found in one word—self-restraint. Business must restrain itself on prices. Labor must restrain itself on wages. The spenders in Congress must restrain themselves on appropriations for social welfare.

Steady growth and a stable dollar are certain to result from such restraint.

But what must be borne in mind above all else is that profits derived from private business are necessary to support the Government. We must never kill the goose that lays the golden egg."

Curtailing Foreign Imports

EXTENSION OF REMARKS
OF
HON. JOHN H. DENT
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Monday, March 2, 1959

Mr. DENT. Mr. Speaker, as usual, opposition to the present administration on reciprocal trades and the Buy American Act, draws editorial comment, as well as a batch of misinformation, which serves to further confuse the minds of the public as to the realities of the situation. I am submitting for the RECORD today two editorials appearing in local papers which would appear to cover the subject to the uninformed, but to those of us who have made a thorough study of the situation the answer is not so simple. I submit, therefore, Mr. Speaker, my reply to these editors and their editorials:

OPEN LETTER TO THE PITTSBURGH POST-GAZETTE

FEBRUARY 27, 1959.

To the EDITOR.

DEAR SIR: I don't write Letters to the Editor very often. When I do, it's because either the information is in error, or I am badly informed.

On Wednesday, February 25, your editorial appears to put my fight for the awarding of large contracts to foreign governments in a bad light.

Personally, I've been an advocate for liberal trade policies. However, I always felt that the promises of every President, every Secretary of State, and every Secretary of Commerce—since the passage of the original reciprocal trade bills and the foreign aid legislation—were being kept.

Every assurance was and is still being given that no arguments on trade would be made that would prove to be injurious to any American industry.

The facts do not bear out these assurances:

Most of our troubles are of recent vintage, the Buy American Act has been openly and flagrantly abused since the Presidential order of December 1954, decreasing the American differential allowance from 25 percent to 6 percent.

The escape clause has been invoked 60 times by industry and minor relief has been granted only 19 times and no relief in the other 41 cases.

This record was compiled in spite of the fact that in 31 cases the Tariff Commission ruled unanimously in favor of tariff relief for the injured industries.

Two classic examples are the binocular and watch industries. After many protests against the competition from abroad, they closed shop and are no longer producing in the United States. The prediction is that all the watch industry will fold unless something is done.

These are not isolated cases, they are the rule, and not the exception.

Insofar as your figures for export and import of electrical equipment, the testimony given us is that of all the export business done by American producers all but $200,000 worth was paid for by our own money under mutual aid, ICA, and other Government spending and lending agencies.

Even this market is now threatened by new regulations being put into effect.

I believe a trade agreement has to be mutually beneficial and mutually respected.

In the case of British selling our Government generators and other power-producing

equipment, the testimony shows that the British do not permit any foreign country to sell any item of this nature to their entire power industry.

In the case of the Jeannette Elliott plant, the differential was approximately 12 percent and this, according to the President's order, should have given the business to our local company.

However, they invoked a new item into the calculations by giving credit to the Swiss company for the 13 percent ad valorem duty charged on the import.

Needless to say, the Jeannette company, nor their workers, were given credit for the taxes, Federal, State and local, paid.

I don't want to appear to be an isolationist or a high tariff advocate. I do, however, recognize our higher standards of pay, fringe benefits, personal and corporate taxes.

I also recognize that we need friends everywhere. Somehow, I can't believe we make friends by taking over their production facilities with our investments and our markets.

I may be a little short on the economics of the situation, but I can't figure how it will help the American workman and the American businessman by making it more attractive profitwise, and taxwise for an American manufacturer to close his plants here to make investments abroad and to be allowed to take his foreign profits tax free, if he reinvests in other foreign enterprises. The promotion also calls for limiting American investors in foreign enterprise taxes to the limit of the taxes paid through foreign corporation earnings and investments to the taxes assessed by the foreign country.

One example given shows where a steel producer pays a limit of 30 percent on net income compared to 52 percent here. This may be all right if we can afford it, however, I doubt if we can with the debt and budget greater than all the rest of the world combined.

In closing, and to make a point, I refer back to my statement that agreements have to be mutually beneficial and respected.

Let's take the auto industry. We give concessions to foreign cars that permit the following comparative prices in New York City and other places:

New York, United States of America: American Ford $350 more than British Consul, $900 more than German Volkswagon.

London, England: Ford $3,850 more than Consul, $3,800 more than Volkswagon.

Cologne, Germany: Ford $1,900 more than Consul, $3,800 more than Volkswagon.

Copenhagen, Denmark: Ford $2,800 more than Consul, $3,700 more than Volkswagon.

Caracas, Venezuela: Ford, $2,800; Consul, $2,050; Volkswagon, $1,750.

South Africa: Ford, $3,350; Consul, $2,250; Volkswagon, $1,800.

Mexico: Puts a 100 percent tariff on all American cars.

The formula shifts in its application in Brazil, Japan, the Philippines, and other markets, but in every case the heaviest duties apply to American cars.

This is known as market rigging and this is the reason we have lost our foreign market and about 13 percent of our home market.

When we can't keep our production lines at full capacity, it adds to the cost of the item produced and with the loss of foreign markets we are necessarily put into a position where we can't compete successfully with imports.

This doesn't alibi our big cars and luxury items but how do we explain the fact that Nash has all of its "Metropolitan," their cheap, small, unadorned car, made exclusively in England and it's the same car formerly produced here.

I know that both sides of an argument has logic and sincerity on their side. I can't, however, as a public servant, be choosy in the matter of whose job I shall try to save.

To me a worker in the glass plants, rubber works, bicycle shops, coal mines, electrical or any other endeavor is equally distressed if he is unemployed.

I shall never knowingly vote to create conditions that will cause any American worker to lose his job or any American business, including your journalistic enterprise to lose its earnings on its investments and services.

I know this is a long "letter" but believe me, I haven't scratched the surface of the problem.

I hope we can find a solution that will help us keep both our friends, our jobs, and our standard of living.

Sincerely,

JOHN H. DENT,
Member of Congress.

[From the Pittsburgh Post-Gazette, Feb. 25, 1959]

HOW TO PROTECT JOBS

Before Congressmen—and Jeanette's Representative JOHN DENT notably among them—take action to curtail the American importation of such goods as electrical generators, they should be reminded that foreign trade is a two-way street on which this country enjoys a preponderance of the traffic.

The current debate has arisen because Swiss and British firms have underbid American firms on electric generators contracted for by agencies of the Federal Government. Mr. DENT and others have complained that this would deprive American workmen of jobs. While Mr. Dent certainly can't be blamed for protecting what he believes to be the best interests of his constituents, he should take a look at the other side of the street.

Pittsburgh Congressman WILLIAM S. MOORHEAD has pointed out that this country exports far more electrical equipment than it imports. State Department figures for 1957 show that the United States exported $1 billion worth of electric machinery and apparatus while importing the same sort of material valued at only $145 million. In the field of electrical generators alone, American exports totaled $175 million as compared with imports of only $13 million.

When renewal of the reciprocal trade program was up for congressional consideration last year, it was estimated by Government officials that world trade makes jobs for at least 4½ million American workers. Closer to home, exports bring $793.2 million yearly to Pennsylvania, $164.7 million annually to Allegheny County alone. This trade represents full-time jobs for more than 9,400 workers in the Pittsburgh area's five principal industries.

The jobs of these and other workers would be jeopardized, and this Nation's unemployment problem would be aggravated, if Congress supported a program aimed at protecting American workers through higher tariffs or subterfuges in the name of national security. That would invite reprisal by foreign countries which could cost more American jobs than would be protected. If we are to continue to sell our products abroad, we must encourage conditions under which foreign countries can do business with us.

Mr. HARRY PORE, Jr.,
Editor, the Monessen Daily Independent, Monessen, Pa.

MY DEAR HARRY: Your story and editorial again demonstrate your technique of telling half-truths.

Where did you get the story that Congressman MOORHEAD "hits" DENT on Buy American?

Mr. MOORHEAD has never once argued with me on my position of fighting for the Government orders for Westinghouse and Elliott Co., of Jeannette.

In fact, he was one of the cosponsors of my resolution asking that the orders be given to the American concerns.

The only difference between my thinking and some of the others is that I can't see any difference between my unemployed glass workers, steelworkers, and others because of our trade policy than an electrical worker.

There is no change in the position of my congressional district, since my predecessor, Congressman Kelley, fought and voted against reciprocal trade agreements.

Our district happens to be one of the areas that has been sacrificed to the sacred cow of cotton and other low man-hour production exports.

I am not now, nor have ever been, a Smoot-Hawley high-tariff advocate.

I am now, and have always been, a believer in fair trade and believed what every President and every Secretary of State and every Secretary of Commerce of the United States have said time and time again for the record, "That no reciprocal trade agreement will be made that will cause undue hardship or injury to any American industry."

I believe in that, and I believe also that if we made concessions we should receive same.

I know you would like to be fair, so I'll give you some facts that are compelling, at least to a Representative of the 21st Congressional District of Pennsylvania, with its heavy unemployment. I've just received the latest figures on our trade balance with Japan, and I believe it tells the story that I'm trying to emphasize. We trade payrolls and raw materials for consumer goods and unemployment.

We sell Japan: Cotton, wheat, soya beans, metal working machinery, heavy oil, crude petroleum, bituminous coal for steel producing, iron and steel scrap, barley, cotton mill waste and pulp, hides and skins, beef tallow, corn, miscellaneous.

We buy from Japan: Processed and canned fish products, iron and steel, pottery, silk fabrics, sewing machines, optical instruments, cotton fabrics, wool and worsted fabrics, pearls, cotton clothing, railway sleepers, glassware, cooking utensils, miscellaneous.

Although there is a slight trade balance in dollars in our favor, the indisputable fact remains that the things we sell are used to make products to sell back to us.

We have 38 million tons of steel capacity idle, yet the U.S. Navy buys 5,700 tons of steel plate from Japan. Last week we ordered $9 million worth of radar equipment from Canada and Westinghouse and General Electric are on short workweeks with thousands unemployed.

It isn't an easy matter to know the answer but one thing is sure, we can't operate without employment and when the State Department decides which jobs to sacrifice and which jobs are to be protected, let us hope that our district factory workers get as much consideration in the future as oil, wheat and corn planters.

I am not against trades—all I want is reciprocal trades that are reciprocal.

I am attaching a letter with more details of interest which I have sent to the Post Gazette.

Hoping we can work together, at least for our district, I remain,

Sincerely yours,
JOHN H. DENT, *Member of Congress.*

FULL CIRCLE

Representative JOHN H. DENT, of Westmoreland County, is engaged in a strange campaign for a Democratic Congressman of the New Deal persuasion. He is promoting so-called buy American legislation to protect U.S. manufacturers against foreign competition.

It has been a good quarter-century since a Congressman from this area adopted such a position. The last one from Westmoreland County was classified by the Democrats, if memory serves us, as a reactionary.

So apparently we have come full circle on the question of free trade vs. protective tariffs. Representative DENT's position is indistinguishable from that of the blackest Republican of the Smoot-Hawley era.

It is hard to avoid the impression that Mr. DENT is more interested in votes than in finding the right answers to problems of foreign competition and world trade. Some industries in his district are feeling the effects of foreign imports; so he proposes the simplest possible remedy—shut out the imports, buy American.

What it pleases him to overlook is that the United States by and large is an exporting country. Take Europe, from where come the products that are bothering Mr. DENT. In 1957 the United States shipped to Europe nearly $6 billion worth of products; we imported from Europe about $3 billion worth.

Does anyone seriously believe that if the United States reverts to a high tariff policy, it will continue to find the world's markets open to it?

The Leopard's Spots Come Back

EXTENSION OF REMARKS
OF
HON. JOHN J. RHODES
OF ARIZONA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 24, 1959

Mr. RHODES of Arizona. Mr. Speaker, under leave previously granted, I would like to include in the RECORD an editorial entitled "The Leopard's Spots Come Back" which appeared on February 14, 1959, in the Phoenix Gazette, Phoenix, Ariz.:

THE LEOPARD'S SPOTS COME BACK

Some time ago, the Fund for the Republic got its tax-free tail in a crack by blatantly propagandizing the pseudo-liberal line. Congress began to look as if it might do something unpleasant about tax exemptions, but the rumbles subsided when by coincidence the fund switched signals. Henceforth, it announced, it would devote itself to a scholarly study of the basic issues underlying a free society. And the fund wouldn't even be responsible for the findings of its scholars.

Responsible or not, the fund has spent a great deal of tax-free money first financing, and now distributing a thoroughly biased, lopsided report on "Right to Work in Practice." The object of the report's author appears to be to discredit right to work laws everywhere on the basis of one badly chosen example. We find it hard to believe that officials of the fund did not know the author's feelings before they commissioned him to make the so-called study.

Frederic Meyers is the author. The fund in its introduction to his report says he has taught at the University of Texas, the University of Illinois and, currently, the University of California at Los Angeles. For his right-to-work guinea pig he chose Texas, which has barred compulsory unionism for the last 11 years.

What any purely objective reporter who knew his subject would have pointed out—but Meyers does not—is that Texas is not a typical right-to-work State. Most such States, like Arizona, have laws which do no more than declare that no one shall be deprived of a job for joining a union, or for refusing to join one. That's all. But the Texas law tries to upset collective bargaining by a majority unit, which makes it uniquely undesirable. Yet Meyers tries to tar us all with Texas' fault.

Aside from his fatal error of fact, Meyers appears to adopt as his basic theory the professional unionist's dogma that right to work laws represent a struggle between labor and management. On such a false assumption, it is inevitable that he should reach the conclusion he does, that right to work laws haven't changed much of anything in industrial relations. Unions have continued to grow and employers have continued to deal with them. Considering that most right to work advocates have always predicted this would be the case, it is strange to find Meyers labeling the laws ineffective.

That even the faulty Texas law has been effective in protecting the right of individuals to live up to their own moral principles, which is the object of the right to work movement, is demonstrated by Meyers's own findings. In interviewing persons who had used the law to reject union membership while keeping their jobs, he found some who felt that the union had become too strong and overrode both the employer and the employee. Others complained that the particular union was undemocratic. Some were opposed to the principle of unionism. One said his religious conviction made it impossible for him to join a union.

One would think America should applaud a law which makes it possible for individuals to live up to their moral principles without suffering economic reprisal. Meyers does not think so. He tips his hat politely to the idea that minority rights should not be disregarded, but then creates something he calls an industrial citizen—that is someone who works for a living—and remarks that this industrial citizen can reasonably be required to assume the responsibility of citizenship. In case you hadn't guessed, he means union membership when he says citizenship. In other words, Meyers thinks it is reasonable to force workers to join a union.

His entire report is little more than an argument trying to justify this belief. He speaks of the duty of participation in unions. He even indicates that those who abstain from union membership are infringing the rights of others—although what rights these are, he does not specify. And at the end he makes the flat statement—a dead giveaway of his own approach—that those who support right to work proposals wish essentially to make a public demonstration of the power to defeat the labor movement in the political arena. Nuts. Right to work laws are intended to permit the individual, even if he is one out of a thousand, to exercise his liberty if he wants to. The U.S. Constitution strives in the same direction.

Meyers is entitled to his views, just as we are entitled to disagree with them. But whether the fund for the republic is entitled to tax-exempt status while financing such propaganda under the guise of a scholarly study is another question entirely. We think not.

ORT Day

EXTENSION OF REMARKS
OF
HON. FLORENCE P. DWYER
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 11, 1959

Mrs. DWYER. Mr. Speaker, one of the most remarkable and constructive programs in the field of human welfare is the Organization for Rehabilitation Through Training or, briefly, ORT. On March 4, 1959, members and friends of ORT will celebrate the 79 years of service to displaced and underprivileged Jews throughout the free world.

ORT Day has become a traditional observance in those hundreds of communities throughout the country where dedicated ORT members work for the rehabilitation of their fellow Jews wherever they may be in need.

Through its 400 vocational training installations in 20 countries, the ORT program offers youths and adults both the opportunity to learn the industrial skills which will make them self-supporting. Through this process of rehabilitation of individuals who would otherwise live out their lives in idleness without practical utilization of their talents and abilities, ORT also contributes to the economic development of free-world nations by training productive citizens.

ORT Day, 1959, will have special significance for the 50,000 members of the Women's American ORT, since it marks the 32d year of service by the organization to a total of several million people. On March 4, in my own city of Elizabeth, N.J., as in cities from the Atlantic to the Pacific, the 100,000 members of other American ORT federation affiliates and many thousands of friends of the ORT program will join in special celebrations.

It is a privilege, Mr. Speaker, to call the attention of our colleagues to this important occasion in the history of man's humanity to man.

Soil Conservation Program in St. Clair County, Ill.

EXTENSION OF REMARKS
OF
HON. MELVIN PRICE
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Monday, March 2, 1959

Mr. PRICE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include herewith the 1958 annual report of the St. Clair County, Ill., Soil Conservation District. This marks the 20th year of operation by the oldest conservation district in Illinois. The officers of the district are: Verlan Kamper, chairman; Arnold Mauck, vice chairman; Melvin Wagner, secretary-treasurer; Harvey Teberend and Ralph J. Weilbacher.

TWENTIETH ANNUAL REPORT, ST. CLAIR COUNTY SOIL CONSERVATION DISTRICT

The St. Clair County Soil Conservation District held 12 regular meetings and one special meeting during the year 1958. We met on the third Tuesday evening of every month. We had good attendance at our meetings throughout the year by board members. Others who attended our meetings included: Soil conservationist, Ray Irwin; farm advisor, Clarence Clark; assistant directors, Herman G. Heberer and Oscar Weber.

Other visitors during the year included Howard Turner, area conservationist; and past directors, William J. Pfeffer, Ralph Emge, Jr., Hugo Haertling, and Elmer Bertelsmann.

The terms of three directors terminated in February this year. They were Verlan Kamper, Ralph Emge, Jr., and Melvin Henss. Those elected at the annual meeting to fill these vacancies were: Verlan Kamper, reelected, Ralph J. Weilbacher from Millstadt, and Arnold Mauck from Lebanon.

Following the election the board organized at the February meeting as follows: Chairman, Verlan Kamper; vice chairman, Arnold Mauck; secretary-treasurer, Melvin Wagner.

At this meeting Mr. Heberer and Mr. Weber were appointed as assistant directors.

In order to have a good active board, it is always necessary for members to take part in area and State meetings. It is only through these activities that a board member learns of his responsibility to the people in the district. We had good activity in this field as shown in the next paragraph.

There were four Lower-Kaskaskia Land Use Council meetings this year. We were host to the council meeting in April at which time Melvin Wagner was elected secretary-treasurer and also he was elected to represent the council on the Board of the Association of Illinois Soil Conservation Districts. All these meetings were well attended by our board. Kamper and Wagner attended the State convention of the Association of Illinois Soil Conservation Districts at Jacksonville. Wagner participated in the program whereby recognition was given to the 20 years of service to districts.

The watershed program has developed interest in this county. The Richland Creek watershed application was approved by the State of Illinois and Washington, D.C. for planning. Another group made application during the year. Representatives of the Mascoutah surface water protection district met with the board this year and asked the District to cosponsor an application for assistance in planning and conducting the improvement on the Hog River-Pig Creek watershed under the Watershed Protection and Flood Prevention Act, Public Law 566. This application has been approved by the State of Illinois and is now in Washington, D.C. for consideration. There were two watershed hearings in the county at which time the district presented statements offering their cooperation. These were on Richland Creek at Belleville and Silver Creek at Mascoutah.

We sent copies of the "Soil Stewardship Sunday" booklet to all the churches in the district. Many churches observed the Sunday. We also purchased the booklet "The Wonder of Water" for distribution in the schools at the fifth grade level. During the year Ray Irwin and Herman Heberer conducted 426 children of the Belleville fifth grades on a soil conservation tour over Heberer's farm.

We had a pond demonstration field day at the Kamper farm in August. Pond location, construction methods, and management of weeds and fish were discussed. Spraying weeds and shocking fish were demonstrated. This was a successful and interesting meeting with an attendance of about 100.

Last spring we offered a $50 scholarship toward tuition for the teachers training school in Springfield but no one took advantage of it.

Three ball-point pens were given to 4-H Club members who completed 4-H soil conservation projects this year. We expect this participation to increase.

During the year the board approved 56 new cooperators and there were 11 cancellations due to sale, death, etc. Farmers are beginning to take advantage of their soil conservation district and it appears that the workload will increase this coming year This brings up an important point for our soil conservation office, because it is definitely short of assistance. We are carrying on a good program but with some additional help our district could do so much more towards getting soil conservation on the land.

We wish to extend our thanks to all who have had any part in expanding our soil conservation work in the district. We wish to thank the extension service and the U.S. Soil Conservation Service for their cooperation in selling and putting into operation our well-developed program. Especially we wish to thank Clarence Clark, farm advisor, and Ray Irwin, soil conservationist and his coworkers, Howard Limestall and Orville Dickhaut.

We also want to give credit to the ASC committee for their cooperation through the ACP cost-share program whereby many farmers are encouraged and assisted financially towards installing soil conservation practices. Special thanks go to Office Manager, Robert Olsen and to Mrs. Deloros Grimmer who handles all ACP participation.

We also want to thank the Illinois State Department of Conservation for their technical assistance in biology, fisheries, and forestry. Also the Illinois State Department of Agriculture for the help furnished us through the State board. A vote of thanks also goes to the St. Clair County Board of Supervisors for their financial assistance to the district. And finally we want to thank all our district cooperators who are taking advantage of the soil conservation program and are using all these services to get more soil conservation on the land. This is our only measure of success. All this cooperation toward one objective will improve and secure the greatest natural resource in St. Clair County—namely the soil.

The past 2 years we have had an excess amount of rainfall during certain seasons. This makes me think we should practice more soil conservation to keep this soil and hold this water for the drier seasons of the year. To hold the water longer on the rolling land will also prevent a larger number of drainage problems on our level and low lands.

I would like to close with a quotation used on the memos of the auxiliary of the Association of Illinois Soil Conservation Districts at the 1958 meeting:

It took brawn to conquer the land; it will take brains to keep it.

VERLAN KAMPER,
Chairman.

1958 PROGRESS REPORT

Total cooperators approved by district, July 22, 1938 through December 31, 1957	869
Cooperators approved this year	56
Total cooperators approved by district	925
Less cooperators cancelled by death, sale, etc	175
Total active cooperators to date	750
Total basic plans prepared through December 31, 1957	771
Basic plans prepared this year	17
Total Basic plans prepared to date	788
Less cooperators cancelled to date by death, sale, etc	175
Total active Basic plans to date	613
Total Basic plans applied this year	37
Total Basic plans applied to date	230
Cooperators serviced by SCS during the year	282
Cooperators completing one or more practices on their farm	215

Amount of field work reported by the Soil Conservation Service is as follows:

Pasture seeding	170 acres
Natural reforestation	101 acres
Tree planting	32 acres
Fish pond improvement	52 each
Hedge planting	1296 rods
Wildlife area improvement	102.7 acres
Ditch construction	6.1 miles
Diversion construction	1.8 miles
Drainage	420 acres
Drop inlet construction	12 each
Drop spillway construction	14 each
Pond construction	26 each
Terracing	2 miles
Waterway development	33.5 acres

FINANCIAL REPORT

Balance on hand January 1, 1958	$599.90
Deposits:	
State of Illinois	74.35
St. Clair County Board of Supervisors	480.75
Total	$1,155.00
Expenditures:	
Annual meeting expense	$22.50
Secretarial work, office supplies	107.55
Field supplies	22.87
Dues—Friends of the Land	8.00
Dues—NASCD	65.00
Dues—Assoc. Ill. SCD	70.00
Dues—Lower-Kaskaskia Land Use Council	1.25
Soil Stewardship Sunday	25.00
Mileage for directors	78.20
National Convention Expenses	15.00
Telephone	6.00
Photo supplies	3.10
Educational supplies	56.10
Total	480.57
Balance on hand December 31, 1958	674.43

Castro's Cuban Justice on Trial Before the Cleveland City Club

EXTENSION OF REMARKS
OF
HON. CHARLES O. PORTER
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Monday, March 2, 1959

Mr. PORTER. Mr. Speaker, under the leave to extend my remarks in the RECORD, I include the following address which I delivered last Saturday, February 28, 1959, before a luncheon meeting of the Cleveland City Club in Cleveland, Ohio:

Before I speak about a nation whose new government is barely 2 months old today, please let me say a word about a State whose 100th birthday was February 14, 1959, Oregon, my State, that is. In the Pacific Northwest we are having a big centennial celebration out there this spring and summer. You are all invited. I personally invited Fidel Castro earlier this week, pointing out to him that he would feel at home because many of the men are sporting outrageous beards and our mountains would please any rebel band. We have many other attractions. Do plan to visit this newer northwest territory. I guarantee that you will enjoy yourselves.

Here is a proposition I trust you will concede without argument: A Member of Con-

gress becomes an authority in any area, physical or abstract, by any contact—be it ever so slight. I hope to demonstrate this to you today.

According to the title of my remarks today I am an "eye-witness" and as such I am supposed to report to you on Castro's Cuban justice. In a moment I shall lay a foundation for my testimony. First, let us consider the issues on which I shall testify:

1. Does the quality of Castro's justice indicate that Cuba is now a police state or soon will be?

2. Does it show Communist influence and anti-U.S. sentiments, existing and potential?

3. Does it mean that Castro intends to bring revolution to other lands?

4. What can we do, officially and personally, to improve the qualities of Castro's justice and our relationships with Castro's Cuba?

JUSTICE IN THE BROADER SENSE

I make no apology for using justice in the broader sense. I do not confine it to the cases of the accused war criminals. Justice as I use it in these remarks represents the purpose of government. In other words, what does Castro's treatment of accused war criminals tell us about the nature of Castro's government?

Now, as to my qualifications as a witness, a few words so you who have questions for me won't be too hard on me when your turn comes. I don't speak Spanish. I have never had a formal course relating to Latin America. Within the last 2 years I have made two short visits to Puerto Rico, two to Venezuela, one each to Costa Rica, Colombia, Honduras, and Panama. I have visited Cuba three times, the first on my way back from Honduras in December of 1957 for about 3 hours between planes. My wife and I took a taxi into Havana and discovered that we couldn't get within four blocks of the presidential palace because of police barricades. The second time was last month for 2 days and the third time was a week ago for 3 days. Exactly a week ago at this time I was making a speech in Santiago de Cuba at a meeting sponsored by the Santiago Committee for Industrialization and Progress. The Lions Club, the Rotary Club, the Twenty-Thirty Club, and the chamber of commerce were all there. Last Monday I again talked with Fidel Castro, this time for 45 minutes.

Now, if you'll bear with me, just one more flashback:

Shortly after I arrived in Washington, in December of 1956, I learned that a constituent of mine, Gerald Lester Murphy, had disappeared in the Dominican (so-called) Republic. In the course of trying to find out what happened to him I discovered that our official policy was to be kind to dictators. I didn't like this. I said so. Not only did I believe our treating Trujillo as though he were respectable had made him think he could get away with murdering Gerry Murphy, but it was plain to me that our policy conflicted with our Nation's deepest traditions and played into the hands of Communists.

HOW THE BATTLE WAS JOINED

In the course of my expressing my protests about our official policies I naturally included other dictators Perez Jimenez, of Venezuela; Stroesner of Paraguay; Somoza, of Nicaragua; and Batista, of Cuba. In my office and in my travels I met many of the antidictator nationals of these countries. I received many letters from them. I learned a great deal from persons who had been in this fight much longer than I, such people as Herbert Matthews, of the New York Times editorial board; Gov. Munoz Marin, of Puerto Rico; Jose Figueres, former President of Costa Rica; Alberto Lleras Camargo, now President of Colombia; Romulo Betancourt, now President of Venezeula; and many others. I found that my strongest allies were the Inter-American Press Association and newspapermen who knew the area, and also organized labor, particularly the AFL–CIO vice president, Serafino Romualdi.

I am still ignorant in many respects, but not quite so much so, thanks to my friends. My distinguished colleague, Mr. BRAZILLA CARROLL REECE of Tennessee, former chairman of the Republican National Committee, disagrees with me about Castro's justice. On February 9, in an insertion in the CONGRESSIONAL RECORD, he calls me his irrepressible colleague (which in this connection will doubtless continue to be true), and he also calls me one of the principal apologists for Castro. He thinks Castro is encouraging communism. He doesn't want us "to condemn in word or action any government with whom we are in free alliance," but he thinks we "owe it to mankind" to protest the "obvious and proven disregard of the basic elements of justice and fair play" by the Castro government.

THE QUESTION OF A POLICE STATE

This brings us to the first issue on which I shall testify as an eyewitness. Is Cuba now a police state?

It is true that Castro is the strong man in Cuba today. It is true that military tribunals are trying accused war criminals and that some 300 have been executed upon being found guilty. It is true that the procedures do not involve the use of a jury nor of many of the procedural safeguards we deem essential in Anglo-Saxon jurisprudence. It is true there are no freely elected officials in the executive or legislative branches.

It is also true that Fidel Castro, President Manuel Urrutia, Ambassador Dihigo, his Cabinet Ministers, and the barbudos, or "bearded ones" in the 26th of July movement are not the kind of people who countenance "blood baths," much less arrahge them. The Cuban people love the barbudos. They greet them and wave to them. What a difference from the way they felt about Batista's soldiers and police.

I think the beards mislead many people in our country. For example, a week ago in Santiago de Cuba, the capital of Oriente Providence where the revolution began, I met Manuel Pinero, the commandant of Castro's forces there. He has the most magnificient red beard and locks I've ever seen. Until you talk with him and unless you had known other Castro men, you might think, "What a screwball this guy must be." In fact, though, Commander Pinero is a capable, sensitive and decent man. He studied economics at Columbia University. His wife, Lorna, who has an M.A. in psychology, comes from New London, Conn. At midnight last Saturday he escorted me on a tour of the Moncada, the military barracks in Santiago, where Castro made his famous attack on the 26th of July and where Masferrer, Batista's terrorist-in-chief, had his headquarters and where many boys and men were horribly tortured.

"We don't like this place," Pinero told me. They plan to destroy the buildings where the atrocities were committed and to make a school out of the rest. The weather was excellent that night. Many people were on the streets at 1 a.m. Under Batista, my hosts told me, the streets were deserted after 9 o'clock.

A LESSON IN HUMILITY

On the following day, Sunday, Pinero told me they were going to have a degradation ceremony. His wife thought at first he meant to say "decoration" but he didn't. Some noncom had made a mistake and he was being stripped of his rank in a public ceremony. The Castro men never looted, they never raped, they never tortured or killed prisoners. They don't drink whisky. I have met many of them. Never have I seen one who swaggered or was loud-spoken. They are not a rabble in arms. They are disciplined and restrained, dedicated but not fanatical—because of a humility they all possess. Major is their highest rank. One captain told me they had just been paid for January. His salary after deductions was $208.

I asked Commander Pinero how they were able to indoctrinate the new recruits who joined them in great numbers when they left the mountains last December to march toward Havana. He told me that, in addition to giving them examples of conduct and specific instructions, they shot one new man who stole a can of milk. They are very serious about maintaining the high morality of their revolution, but not to the point of setting up their own terror.

A REBEL IN SUNDAY SCHOOL

As I left Santiago the man across the aisle in the airplane was a Baptist minister from Park Forrest, Ill., by the name of Joseph L. Hughes. He and several other Baptist ministers had just spent 2 days in Santiago. "We hadn't been here 10 minutes," he told me, "until we had a different picture than the press had given us." He said they had just left one of Castro's top men teaching a Sunday school class. He shared my admiration for these man and said he and his colleagues would be speaking up on their side when they returned to the United States.

Yes, an army is in control of Cuba, the rebel army. But there are civil liberities, including freedom of the press, and there is a promise of free and honest elections in less than 2 years. The men who are in command are decent men worthy of our support and sympathy in their struggle to establish democracy in Cuba.

After my talk in Santiago last Saturday the Castro men flew me about 50 miles north to the Sagua de Tanamo, a town of about 6,000 inhabitants, which had been cruelly damaged by Batista's air force. Nearly 300 civilians were killed there. This was the first time I had seen a bombed city in this hemisphere. Whether or not it was a war crime is not clear. The evidence is conflicting. The 21-year-old captain who escorted me, owner of a sugar cane farm and student of chemistry who intends to enter politics someday, a softspoken athletic lad by the name of Caleb de Quesada, told me he had been informed that there was no resistance, but barbudos in the village told me they did fight back. Both could be correct. The assault extended over 10 days. The resistance probably developed after repeated attacks. The invariable Castro tactic was to come into a town at night, take all the guns and retire to the hills before dawn. All air attacks were in the daytime. This young captain, by the way was Castros heavy weapons expert.

WHAT IS A WAR CRIME?

The point here of course is which, if any, of the 40 or more Batista pilots now on trial in Santiago are war criminals. I talked this over with Pinero and with Castro. They agreed that the burden of proof was on the prosecution to show that the accused man knew he was shooting or bombing only to terrorize civilians and not as part of an attack on enemy forces.

This testimnoy of mine adds up to the finding that Castro and his men are as decent as Batista and his men were indecent.

But, you might ask, because in many instances their procedures were summary and they have executed many men, how do we know that they haven't killed innocent men? I attended no trials. I relied on a free press to tell me about them. The press has been free and wide-ranging since Batista left, yet I have to date seen not even one allegation that an innocent person has been executed or that any one of those condemned had no opportunity to defend himself. This does

not mean I endorse the procedures. I do not. From the first I have urged their improvement.

The persons being executed are not shot because they are Batista supporters as one news story stated, but because they were murderers of defenseless men, women, and children. Castro can predict that about 400 will be executed because he knows very well the files on the notorious murderers in the police and in Masferrer's "tiger" army. These files were carefully prepared by thousands of spies. Batista's men helped by not trying to hide many of their atrocities, thinking to intimidate the Cubans. Pinero made available to me pictures taken by Masferrer and his sadistic underlings. They are beyond description. What man can do to man is incredible. The Nazis did no worse.

THE HIGH COST OF WORDS

I knew about these atrocities and I blamed Batista for them while he was in office. Many Cubans and others sent me stories and photographs. Why didn't the Nation know? One reason is that Batista corrupted the press, even some of our own. He bought good words or, at least, silence. The Associated Press, a fine organization with high ideals, fired one of its employees in Havana, Arroyo Maldonado, a Cuban citizen, about a year ago when it found he was receiving money from Batista.

An Associated Press staff writer, Robert Berrellez, one member of the entirely new AP American contingent in Havana, finished his recent series on the Batista atrocities with this paragraph, referring to the 400 (out of 2,000 detained) who Castro said would probably die:

"It could have been more, some quarters say, were it not for the strength of criticism outside Cuba—much of it probably growing out of a lack of information on what had happened here."

The Cuban revolution was not a change of the palace guard. It may not achieve all its noble ends. It may even degenerate into a police state of the left or the right. I don't think it will. The determination in the Cuban heart to establish an honest and democratic government is too intense and too universal.

THE PROS AND CONS

This brings us to the next question, what about pro-communism and anti-U.S. feeling in the Castro government? Every enemy of a Latin American dictator is called a Communist and worse. Many Catholics supported Castro and most of his men are of that faith. One cannot be a Catholic and a Communist. Furthermore, Castro and his leaders are middle class people with a social and economic reform program which is not Communistic. Of course the Communists are on the scene, with money and know-how, to take advantage if they can of disorganization and to fire up, as best they can, anti-U.S. sentiments.

A Cuban can be anti-United States without being pro-Communist. Historically there has been very little anti-U.S. feeling in Cuba compared to other Latin American countries. I have found no such feelings. I asked Castro last Monday why, in a telecast a few nights previously, he had put out an anti-U.S. version of Cuban-U.S. history. He replied that he had to be honest, but that he was not anti-United States. I believe him. The best proof is the kind of men he has put in high places and the kind of government Cuba now has.

THE NERVOUS NEIGHBOR POLICY

Both Commander Pinero and Premier Castro assured me that they did not intend to sponsor aggression against their nervous neighbor, Rafael Trujillo, the senile dictator of the Dominican Republic. They know that such action would inevitably invoke the organized action of the Organization of American States against them. This brings us to the third issue: Is Castro's government planning to take the lead in igniting the overthrow of other tyrants in Latin America? "Exiles from any land can come here," Castro told me Monday, "and I will not allow the police to bother them." He makes no secret of his dislike for Trujillo.

Trujillo tried to help Batista. He tried to help Dictator Perez Jimenez, of Venezuela. Now he has, in his capital city, two deposed dictators, Peron and Batista, as living reminders to his long-suffering people that a day of reckoning for such men eventually comes. No wonder Trujillo wishes they would go away.

The shoe is now on the other foot in Latin America. Not long ago the lovers of freedom were running and hiding from torture and death. Now the forces of decency and democracy are strong and becoming stronger. They control Cuba and Venezuela, both potentially wealthy countries. Their leaders speak out against Trujillo. They are only justied in doing so. I think this is in keeping with the most sacred traditions of the United States, a country which was born out of revolution against a tyrant, a country whose citizens know that democracy once attained must be maintained.

THE PROMISE—NOT THE THREAT

Vice President NIXON, with whom I sometimes do not agree, said in Oregon week before last in my presence that "we should concern ourselves more with our faith in freedom, more with the promise of the American Revolution and less with the threat of the Russian Revolution." I say amen to that.

My observations in Cuba lead me to conclude that the Cuban leaders do not intend any rash Bolivar-like expeditions against the declining dictators, but that they will join with Venezuela and other countries in condemning all governments based on terror and tribute and that they will carry this policy into the Organization of American States and other international organizations. Such expressions, in my opinion, particularly if joined in by the United States, will be quite sufficient to insure the early downfall of Trujillo by internal forces which heretofore have been frustrated by the respectability misguidedly accorded to this despotic regime. An invasion of attitude in these circumstances can be more readily effective than an invasion of barbudos.

THERE'S A DIFFERENCE

What about Castro's Cuba in its relationships with the United States? I think we will be more friendly than ever, now that our administration has endorsed a policy of differentiating between democracies and dictatorships, now that Cuba is an emerging democracy, and now that we have an outstanding Ambassador in Havana, a career man, Philip Wilson Bonsal, whose opposition to dictators needs no further demonstration. The two political appointees who preceded Bonsal made a sorry mess of our official standing in Cuba by identifying themselves with the dictator and his minions. Our refusal to withdraw our military missions from the Batista government was an error of immense proportions, yet we are now sending Marines to Haiti to repeat that mistake.

A free, uncorrupted press will do much to help reestablish our good relations with Cuba. Cuba's own struggle as it becomes better known here will enlist support and sympathy. I predict brighter days and closer ties between this fair country and our own, ties based on our common devotion to human freedom. Its government is taking hold. Castro appeared more severe and assured when we spoke Monday. Sunday he and the cabinet spent on a yacht out at sea where they could confer without telephones. I found this out because I was to have had dinner with the brilliant young secretary of the treasury, Lopez Fresquet. His U.S.-born wife explained where he was and why.

I conclude by listing a few of the features I feel we must include in our Latin American policy:

A GOLDEN RULE OF DIPLOMACY

First, and foremost, we must speak up for freedom and against tyranny. This goes beyond our American revolution and back to a manger in Bethlehem. Our ambassadors and military men must be instructed not to identify themselves with tyrants but to be particularly friendly in countries striving for the establishment of human freedom.

Second, we should cut off all foreign aid, both military and technical assistance, to Latin American nations whose governments are based on fraud and force. We should increase such aid to democracies.

Third, we should encourage the exchange of information and citizens. When I was in Santiago I found the local businessmen were eager that the American sailors be allowed to come there again on leave, this not having happened for almost 2 years. State Department officials in Cuba favored it. So did Fidel Castro and the U.S. Navy when I asked them. It is now up to the Department of State, and I hope they decide affirmatively without delay.

Fourth, we must work toward commodity controls, particularly with respect to coffee, along the lines of the sugar agreements which have worked so well.

Fifth, we must make more capital loan funds available through the Development Loan Fund and the Inter-American Bank.

Sixth, and this applies to me, there should be more study of the Spanish language in the United States. We should insist that our foreign service personnel in Latin America and elsewhere maintain a continuing and intense interest in the language of the country in which they serve.

No doubt there are many other policies we need to adopt or to improve, some perhaps more vital than several I have listed. The most hopeful sign, however, in my opinion as a peripatetic eyewitness of part of this hemisphere, is the greatly increased interest shown by the American people in Latin America in the last year. There is no question where the American people stand with respect to democracy and tyranny, but I know Fidel Castro in his lonely mountain hideout often had cause to wonder why the United States Government didn't reflect more accurately the sentiments of its citizens.

In sum, this eyewitness, on the basis of what he has seen in Cuba and elsewhere, reports to you that Fidel Castro, his barbudos and the people of Cuba are doing their utmost to establish an honest and Democratic government in Cuba. The nightmare of the Batista terror is at last ended. The notorious criminals are being punished. Castro told me Monday that all the trials would probably be finished in a month and that many of those convicted would receive only jail sentences. It was my impression that he too will be glad when this phase of the revolution is finished.

I close with an observation made recently by my friend Jose Figueres, former President of Costa Rica and an outstanding leader of democracy. For many years in this hemisphere, Figueres pointed out, no partisan of Democratic government was safe in Latin America. The dictators, through their thugs, penetrated everywhere, even into the United States. The Cuban war crimes trials, Figueres believes, offer a fitting occasion to show that the hemisphere is a little less safe for the men who do a dictator's dirty work.

Thank you very much.

Appendix

Is Inflation the Problem?

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, March 2, 1959

Mr. MULTER. Mr. Speaker, I commend the attention of our colleagues to an article by Dr. Leon Keyserling which appeared in the New Republic magazine of February 9, 1959.

Dr. Keyserling, president of the Conference on Economic Progress and a consulting economist and attorney, was formerly—1950 to 1953—chairman of the President's Council of Economic Advisers.

The article follows:

IS INFLATION THE PROBLEM?

(By Leon Keyserling)

There has now been time for the Congress and the citizens to reflect upon the President's State of the Union Message, Budget Message, and Economic Report. Thus far, although critics of the Administration's accent on retrenchment in the space age are profoundly disturbed, they have yet to offer an adequate alternative course of action. They know we must do more of many things, and that perhaps the most important of these requires an expanded budget and other expansions of Federal responsibility. They also know that ultimately Government is supported by the economy and the people, and that therefore a high rate of economic growth or expansion would help to meet our domestic needs and is essential to meet the Soviet challenge.

However, the President insists that programs directed toward these ends would be inflationary, would reduce the purchasing power of the dollar, and would do more harm than good. And the sincere opposition, including those in the Congress who must decide upon the budget and other legislation, is not confident enough of its own economic ground to be sure whether the President is right or wrong. Precisely how to get growth without inflation is our supreme economic problem. But our economic thinking is not yet readjusted to this purpose.

If we are to think straight on this problem, which has become increasingly urgent since the first Sputnik, we must begin by determining the fundamental purposes of the modern U.S. economy. While a stable price level is highly desirable, a static society may have a stable price level and go down to defeat on many or all fronts. Moreover, a stable price level without more, as during 1922–1929, can lead up to a depression. The great aims of our economy in these times are not to achieve any particular price trend as a be-all and end-all in itself. Instead, our fundamental economic purposes are these:

1. We must call forth the full use of our productive capabilities, including manpower and brains, technology and science, and natural resources. In the current state of our technology, this requires an annual overall growth rate of about 5 percent after we take up fully the current economic slack. Until then, we need to grow much faster. The faster a nation increases total production, the stronger it becomes in an economic sense, and the better able to do what it needs to do, unless it is burning itself out by going so fast that it depletes its resources. We are in no danger of following the latter course.

2. We must apportion our total national production wisely, in accord with relative priorities of needs, so that we do not get what we need least at the expense of what we need most: for example, more gimcrack gadgets and less defense, international economic cooperation, schools.

3. We must combine economic progress and efficient use of resources with economic justice. To illustrate the first two great purposes might be attained, even while the farm population lived by eating the income crumbs.

Broadly speaking, the significance of price and wage and farm income and profit trends in the private economy, and of public finance and monetary policy in the public area, is whether they facilitate or impede these three fundamental purposes. They are means, not ends. And if the machinery is tooled to produce these ends, we get less inflation to boot.

In order to put the President's entire program in perspective, let us look for a moment at how far we have fallen short of our three fundamental purposes since the Korean war.

First, we have failed to use America's full productive powers. The figures which follow are all based upon uniform 1957 dollars, to make the comparisons exact. During the 6-year period 1953–1958 inclusive, with recessions more than half of the time and with an inadequate growth rate the rest of the time, the U.S. average annual overall growth rate was only about 1.3 percent. However, an annual growth rate of about 4.5 percent was needed during that period to absorb our increasing capabilities to produce, in view of a growing labor force and an advancing technology. In consequence, we lost more than $150 billion in potential national production, and furnished about 10 million man-years less of employment opportunity than we should have.

Second, pressing national needs have been grossly neglected. Over the 6-year period, tax revenues at all levels derived from a repressed economy were $30 billion to $40 billion lower than they would have been in a fully productive economy. Thus, we could not afford what we most need.

Third, these trends worked against economic justice. They bore down disproportionately upon all vulnerable groups: the unemployed, the farmer, the low-income family generally, the small businessman. They hurt the old people, because we could not afford to provide them with enough social security. And these damaging effects of low economic growth were compounded, because a price inflation which fed the fat and stripped the lean was taking place at the same time. Any housewife who does the shopping can testify to that.

Now let us look at the causes of this triple default in order to see what went wrong and learn what corrective measures to take. For the 6-year period 1953–58 as a whole, the more than $150 billion deficiency in total production resulted from a deficiency of about $17.5 billion in public consumption through public programs, a deficiency of about $96 billion in private consumption through private spending, and a deficiency of less than $40 billion in private investment caused when the other two deficiencies made it futile to continue investment in the expansion of productive facilities.

Despite its seemingly small relative size, the deficiency in public programs of about $17.5 billion really accounted in addition for about $35 billion to $50 billion of the deficiency in private consumption and private investment, because public outlays evoke other outlays. And this default in public outlays was practically entirely on the part of the Federal Government, because the States and localities were expanding their outlays up to, or in excess of, their limited power to obtain revenues. This must be borne in mind constantly, as one reads the administration's repeated pleas to turn public programs back to the States and localities.

The deficiency in private consumption did not come about because consumers as a whole spent too little of their incomes and saved too much. On the contrary, the $96 billion deficiency in private consumer spending during the period 1953–58 resulted from a deficiency of more than $130 billion in consumer income before taxes. Out of this, more than $30 billion was a deficiency in net farm operators' income, and more than $100 billion was a deficiency in the consumer income before taxes of other groups, made up practically entirely of a deficiency in wages.

These deficiencies in private buying power resulted from both governmental and private actions. The inadequate outlays by the Federal Government for essential public services had an adverse effect upon the whole private economy. Regressive and inequitable tax and monetary policies had similar results. The deficiency in farm income has been attributable to falling farm prices in contrast with rising nonfarm prices, due primarily to a national farm policy which has abandoned the farmer to the free market, while other markets were not free.

This analysis is essential to an understanding of the cause and cure of the kind of inflation with which we have been plagued in recent years. For it has not been an inflation like that of wartime; it has not happened because of intense pressure against our productive capabilities, or shortages, or a hectic rate of economic growth, or civilian purchasing power in excess of civilian supplies. The new inflation of recent years has occurred paradoxically in the face of high economic slack. And moreover, it has been a selective inflation, with some prices and incomes rising too rapidly, while others were falling too fast, or (in the case of incomes) not rising fast enough.

Now, what has caused this selective inflation—for we have had it—since excessive demand was not a factor? The President has more than implied that the inflation has occurred in large measure because wages have gone up faster than productivity thus increasing production costs per unit and requiring price increases—the cost-push theory. This theory misses the real point: the lag in productivity behind wage increase in some instances was not technological, but was due instead to the inefficiencies of operating far below full capacity. And low-capacity operation was certainly not due to excessive wages; if wages had gone up less, even relative to productivity, we would have had a still bigger recession. Therefore, the correct remedy for the alleged inflationary gap between productivity and wages would have been—and is—to lift actual productivity to its technological potential by expand-

ing the economy, not to contract the economy further by holding down wages.

Moreover, in most cases price increases were not due to cost-push wages or otherwise, but to excessive price increases relative to costs. The compelling evidence of this is that the excessive advances of prices compared with wages yielded a level of profits feeding an investment boom in plant and equipment recurrently outrunning private and public buying combined. The extraordinarily high profits in 1957 of some of our major industries which were operating far below full production, and their exceedingly high profits again now while even further short of full production, are much in point. This applies not only to industrial prices but also to many consumer prices, because the former affect the later, and because increasing portions of our consumer-service industries are now huge and administer their prices.

These excessive price increases have in part reflected management's over-excited appetite for capital investment funds in the form of profits. But this hunger was not entirely the fault of industry. In part, industry feared with good reason that the spasmodic periods of high-level production would not be sustained in the absence of a nationwide full employment policy, and that industry needed to store up reserves against trouble.

In short, just as an automobile burns more gas per mile when racing at 80 miles an hour or when dawdling at 13 miles an hour than when running smoothly at 50, so our economy costs more to operate per unit of production either at the racing 8-percent growth rate of wartime or at the 1.3-percent average growth rate of recent years rather than at a 5-percent growth rate. The higher costs of too great or too little speed are both inflationary.

THE SPURIOUS CRUSADE

Despite these terribly costly lessons, the Economic Report of the President again expresses a determination to check economic growth by the same budgetary and tax and tight-money policies which have done so much damage on all scores thus far. The spurious crusade against inflation remains a crusade, not in the public interest but against adequate outlays for defense, international cooperation, and domestic well-being. What are the implications of a continuation of these policies?

While the President's Economic Report hails the speed of our economic recovery, we are recovering at a rate insufficient to take up the accumulated slack, or to make full use of the continuing growth in our labor force and in productivity. Thus, some of our bellwether industries, while expanding their production and sales, are not reemploying many people. Unemployment in 1959 may well be nearly as high as in 1958. Looking further ahead, we are likely to recover from the most recent recession only to average an annual overall growth rate in real terms of perhaps 2 percent.

What would this mean, compared with what would happen if we take up the economic slack more rapidly and thereafter maintain a 5-percent annual growth rate? For the 7-year period from the beginning of 1958 through the end of 1964, it would mean a difference of about $400 billion in total national production, and a difference of about 16.5 million man-years in job opportunity. With respect to our national needs, the higher growth rate (in contrast with the lower growth rate) would yield at existing tax rates about $70 billion more, or an average of about $10 billion a year more, by way of public revenues at all levels for domestic and international purposes. This is the road to a balanced Federal budget, accompanied by high enough public outlays to do at home and abroad what needs to be done and to induce a balanced national economy. And for reasons already given, the low growth rate would be more inflationary than the high growth rate.

Specifically, how can we assure the high growth rate and attention to our top national needs, instead of acquiescing in the neglect of both? We are not now in a total war. But we are in a dangerous period, far from total peace. And if we apply with appropriate variations some of the lessons which World War II taught us about how to mobilize our resources effectively, we shall be more likely to avoid another total war, and at the same time achieve some enormously beneficial domestic results.

In World War II—

1. The Government set quantitative goals for total production and employment, based upon absolutely maximum use of resources and subdivided into many types of products and jobs. It set goals for consumption or use, both private and public, to match these production goals. It set goals for the flow of income or purchasing power, to help maintain balance between production (supply) and consumption or use (demand).

2. To make sure that use was in accord with the relative urgency of our national requirements, there was a very detailed priorities system covering thousands of items.

3. The whole machinery of national public policy was coordinated and directed toward achievement of these fundamental goals or purposes. The Federal budget, including both spending and taxation, was used as the major public instrument in guiding both production and use toward achievement of these fundamentals. Specific ad hoc machinery was also used to expand some types of production by incentives toward private expansion of plant or output (or by direct public investment), and to restrain other types of production and use.

4. In fighting inflation, we did not neglect the fundamental production and priority objectives essential in winning the war. Some said that inflation was a greater danger to the United States than Hitler (during the Korean war they said a greater danger than Stalin), but providentially the administration did not listen to them. Nonetheless, anti-inflation controls included not only high taxation, but also savings programs and direct controls. These were successful, insofar as we did not look at price and wage and profit trends as ends in themselves, but rather as means for achieving full production and simultaneously providing the Nation with what was needed most.

5. The Government was chary of monetary policy to control inflation, because its excessive use defeats fundamental purposes before it checks inflation.

6. The difference between sacrifice and inequity was understood. The Government was not placed on the side of those who wanted the people to respond patriotically to the austere challenge but sought to batten at the public's expense.

7. While all essential freedoms were maintained, we did not suffer the delusion that freedom and Government were antithetical, or that the great problem of the Nation and the world could be solved by having the President tell the farmer, the storekeeper, and the laborer that they in their individual capacities had the most to contribute. Instead, representatives of our functioning economic groups were consulted in national policymaking.

SPACE AGE ECONOMICS

Now, how much of this should we do today and tomorrow? If we are successful in avoiding war, there would obviously be no draft, no breakup of families, no bloodshed. Nor, short of total war, do I see need for the burdens and vexation of direct price and wage controls, detailed priorities systems, allocations or rationing, or (with some possible exceptions) special incentive and prohibitory programs.

But while we are not at war entirely, we are most certainly in the space age, or at least the Russians are. Consequently, our economic policies do need to be as realistic and purposeful, though not as strenuous, as in wartime.

First and foremost, we still need national goals to guide our efforts, although why it takes another presidential commission to define them is beyond me. Such a committee cannot take the place of the executive branch. The Economic Reports of the President, as categorically required by the Employment Act of 1946, should state specific quantitative short- and long-range balanced goals for maximum production, employment, and purchasing power (geared to consumption or use goals), less detailed as to components than in wartime because the pressures on our resources are less, and more can be left to private adjustments. These goals should point toward national economic growth averaging 5 percent a year after the current economic slack is taken up.

It is equally essential that the Economic Reports define what portion of our growing total production and consumption at full resource use should be devoted to those progams which mean most of us as a nation. This does not mean that the Federal Government would do the whole job in all of these priority areas. In national defense, it would do practically the whole job (aside from civilian defense). In education, for example, the Economic Report should appraise how much of the job others can do, what part of the balance the Federal Government can help others to do, and how much the Federal Government itself needs to do to fill in the gap.

In this framework the Federal budget should be an instrument toward what a full economy can afford and needs by way of public consumption or use, instead of being adjusted to what a repressed or stricken economy cannot afford. Federal outlays for calendar 1960, so devised, would be about $10 billion higher than in the President's proposed budget for fiscal 1960, and by calendar 1964 should be about $23 billion higher than the President's proposed 1960 budget, all expressed in comparable dollars. The budget, like goals for the national economy, should be projected over several years in the Economic Report, even if the Congress approves the budget only yearly.

The tax program should be so devised as to help keep private purchasing power in line with the amount of production available for private consumption. It should also impose the tax burden equitably, which really means to improve the distribution of total private purchasing power. If production and consumption goals were properly qualified in the Economic Reports of the President, and if the expenditure side of the budget were framed accordingly, the appropriate tax program would be clear. Such a tax program would result in a balanced budget whenever our resources were being reasonably fully employed, which should be always.

The tight money policy should be abandoned, because it prevents adequate economic growth, contributes to inflation, and redistributes income unjustly. Monetary policy should be adjusted to the goals in the Economic Report. Essential Federal legislative programs include the farm program, basic resources development, social security, housing, and protective legislation dealing with such matters as minimum wages, education, and health. Foreign economic assistance needs immense expansion.

How should the size of these programs be determined? Not by accident, nor by special-interest pressures, but rather by fitting them into their proper place in a consistent

Economic Report and budget which balance our total economic capabilities at full production and employment with a corresponding amount of private and public consumption or use, and with servicing of our needs in the order of their importance.

There remains the pressing question of how adjustments within the private economy, as distinguished from direct public action, can best make their needed contribution to the three fundamental purposes I have listed. Price trends and income flows within the price economy are machinery toward these ends. Probably a fairly stable price level makes it easier to manage the other parts of the machinery and to maintain a workable balance among its parts, but this may not be true at all times, nor true of all prices at any time. As already indicated, I do not believe that it is now desirable to invoke the direct governmental controls. But if the current neglect should make the direct controls essential to enable us to serve our great purposes in the context of the world challenge, then, unfortunately, we would need the direct controls.

But I believe that the most useful treatment of this problem would be for the Economic Reports of the President, in addition to setting goals for maximum production, employment, and purchasing power—consumption or use—to include also careful short- and long-range analyses of what kinds of income flow in general to the various segments of the economy would be conducive to these fundamental purposes, and what kinds of price-wage-profit policies in general would be consistent with this kind of income flow. The Employment Act of 1946 calls for this now, when it says that the Economic Reports should set "needed levels of purchasing power." But the act is being honored in the breach.

It is particularly important that this identification of "needed levels of purchasing power" (the very words of the Employment Act), as well as of "needed levels of production and employment" (also the words of the act), be undertaken in consultation with private economic leadership. In fact, this consultation is envisaged by the Employment Act; and if not only the will but also the instrumentalities to do this are now lacking, then proper instrumentalities should be devised. For example, the kind of committee proposed in the President's state of the Union message might be made an advisory committee to the President's Council of Economic Advisers, and thus involved in the preparation of the President's economic reports or at least the goals therein.

If sufficient attention were directed toward wage-price-profit relationships, and if business were not fearful of alternative periods of boom and bust, i.e., if the Government were to carry out its share in the purposes of the Employment Act, private investment would be likely to be regularized at desirable rates of growth. Appropriate tax policies can be helpful toward this end. The broad definition of needed levels of private investment should be included in the maximum production goals under the Employment Act.

To accomplish these purposes, the economic reports of the President cannot remain, as they are now, merely another set of pro forma and superficial essays on the state of the economy. This is competently done in many other private and public reports. The economic reports are intended to be great state papers on the economic program of the Government attuned to the full economic needs and capabilities of the United States. Instead of the Economic Report being written to support a President's budget and legislative program derived in a vacuum, the President's budget and his entire legislative program should be derived from an Economic Report which properly quantifies our goals and productive capabilities, identifies for achievement the great priorities of our national needs, and responds to the basic requirements of economic and social justice.

HOW CAN IT BE DONE?

The reader at this point may ask how we are going to get these things done if the President and his administration will not do them. One answer is that the Economic Reports of the President and his other basic programs are mainly recommendations to the Congress. The President initiates; the Congress decides. If sufficient initiative does not come from the White House, then more initiative is required of the Congress. If the President and his administration persist in not doing what the Employment Act requires, the Joint Economic Committee of the Congress should do it.

I assume that clarifying the economic issues will be helpful to many well-intentioned men and women in leadership positions who have a sense of urgency, who want to do what is best for the country, but who have been misled by some of the astigmatism about inflation which has so blinded the administration.

An economy functioning satisfactorily, one that serves the three great fundamentals, is less inflationary than an economy responding to repressive and regressive policies which neglect these fundamentals.

Above all, if we now become prey to the notion that inflation is a greater danger to us than Khrushchev, we shall continue to lose more and more ground in the current world struggle. For, in its essence, the administration's crusade against inflation is a campaign against the positive things we need to do. It plays upon illegitimate fears instead of raising legitimate hopes. It tells us that we are weak instead of rallying our strength. It sets up economic Maginot Lines instead of developing new economic weapons. It fails to recognize that in our economic policies just as in our international policies, we cannot have safety or stability by standing still.

Tax Exemption of Public Housing Bonds

EXTENSION OF REMARKS
OF
HON. A. S. HERLONG, JR.
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 3, 1959

Mr. HERLONG. Mr. Speaker, I hope that all Members of the House read the newspaper accounts on March 2 of the tax windfall which results from the issuance of tax exempt federally guaranteed public housing bonds.

In the 85th Congress I raised this issue with the introduction of H.R. 7000 which would end this type of hidden subsidy for public housing.

I am grateful that the distinguished gentleman from California [Mr. McDONOUGH] has again raised this issue with his introduction of H.R. 5096, which would terminate this tax exemption. The gentleman from California is a member of the Housing Subcommittee of the House Committee on Banking and Currency and is therefore well qualified to speak on the subject of public housing and the tremendous burden which it places on the taxpaying public.

When the 1949 public housing bill was under consideration by the Congress, the then Housing and Home Finance Administrator testified for public housing but against the tax exemption of the bonds to be issued to finance these projects. He premised the Administration's opposition to tax exemption by the simple statement that he believed the American people had the right to know what public housing would cost them, and that the cost would be completely distorted or hidden by exempting the income from the bonds from Federal taxation.

I am inserting in the RECORD the statement made by Housing Administrator Raymond M. Foley in February 1949 before the Senate Committee on Banking and Currency Subcommittee on Housing in opposition to the tax exemption of public housing bonds.

I hope that the Members of the House will read carefully the reasons why the Housing Administrator in 1949 opposed the tax exemption of public housing bonds. He lists five reasons, any one of which is important enough to justify repealing the tax exemption.

Unfortunately, the 81st Congress did not heed the advice of Administrator Raymond M. Foley, and the strange alliance of the proponents of public housing and the Wall Street bond houses prevailed.

In 1954 the House Ways and Means Committee tentatively approved a measure which would remove this tax exemption. This action resulted in a deluge of letter and telegrams from mayors and others complaining that this action of the committee threatened the traditional tax-exempt status of municipal and State obligations. I regret that the committee thereupon reconsidered its previous action and retained the tax-exempt privilege for these public-housing bonds.

These public-housing bonds are local obligations in name only. For all practical purposes they are Federal obligations because the full faith and credit of the United States has been pledged to their payment. They are thus the only federally guaranteed obligations which are issued which are exempt from Federal taxation.

No wonder there is such active competition for these bonds. Recently $68 million of these were acquired by Chase Manhattan Bank for a group of wealthy investors at 3.4 percent. This means a yield of from 14 percent to 26 percent for persons having annual incomes of from $50,000 to $100,000. No wonder the gentleman from California [Mr. McDONOUGH] refers to this as a tax windfall for the wealthy.

On February 6, 1952, the Chairman of the Federal Reserve Board expressed concern over the tax haven which these bonds provided for high-income taxpayers. On that date, in his testimony before the Senate Banking and Currency Committee, Federal Reserve Board Chairman William McChesney Martin, Jr., voiced his opposition to this tax exemption in these words:

One important new factor in the market which is very disturbing to us at the Federal Reserve is the tax-exempt bonds which are being issued to finance public housing. Not only do such issues absorb some of the funds that would otherwise supply a market for Government bonds or for mortgages generated by new private construction, but they

afford an opportunity for wealthy individuals and corporations to reduce legally their income tax payments in a period when it is essential that tax revenues be as large as possible.

Mr. Speaker, if the Congress decides that we must have public housing—and I for one am opposed to the program—then the Congress owes it to the people—to the taxpayers—to inform them what it costs in dollars, not in hidden subsidies which provide a tax haven for the wealthy.

I am also introducing legislation to remove this tax exemption, and I hope that the Committee on Ways and Means will give it early and favorable consideration.

EXCERPT FROM TESTIMONY OF RAYMOND M. FOLEY, ADMINISTRATOR, HOUSING AND HOME FINANCE AGENCY, BEFORE SENATE BANKING AND CURRENCY COMMITTEE, SUBCOMMITTEE ON HOUSING, ON BILLS PERTAINING TO GENERAL HOUSING LEGISLATION, FEBRUARY 1949

First, the present exemption from Federal income taxes of interest on obligations issued by local public agencies, in connection with the federally aided slum-clearance program and in connection with the federally aided low-rent public-housing program, has the undesirable result that part of the necessary subsidy cost of such programs cannot be measured. It is a better public policy in such necessary subsidy operations to provide that the whole subsidy shall be a direct and measurable subsidy.

Although removal of tax exemption would increase the borrowing costs of the local housing authorities and thus increase Federal expenditures for annual contributions to them to cover their deficits, it would also cause investors in these securities to pay taxes on income which would formerly have been tax-exempt and thereby increase Federal revenues.

It is reasonably certain that most investors would not purchase tax-exempt local housing authority obligations if they did not expect to save more in taxes than they lose in interest by so doing. Removal of this opportunity for tax saving should, therefore, result in a greater increase in tax receipts than in budget expenditures.

Second, since by reason of the tax exemption, obligation issued by local public agencies in connection with these programs can be sold at a lower rate of interest than the rate of interest borne by direct obligations of the Federal Government, the interest on which is not exempt from Federal income taxes, it is apparent that such obligations of local public agencies are more attractive as investments to relatively high income-tax bracket investors.

An investor with a 50-percent marginal income-tax rate, for example, would get twice as high a net yield after taxes from local housing authority obligations as from Federal Government securities bearing the same rate of interest.

While yields on such securities therefore tend to fall well below yields on comparable Federal taxable issues, no purchasers will knowingly buy such obligations, if their interest loss exceeds their tax savings, and investors with the highest incomes will save substantially more in taxes than they lose in interest.

The larger the volume of tax-exempt securities, the less the reduction in yield and hence the greater the benefit obtained by high-tax-bracket investors.

Third, under the provisions of S. 138 relating to the manner in which Federal assistance for these programs may be extended, the obligations issued by local public agencies are, to all practical extents and purposes, the equivalent, in terms of security for repayment, of Federal obligations. They are generally so regarded by the financial community. Since in terms of security for repayment, such obligations are the equivalent of direct obligations of the Federal Government, the basic security being Federal credit, not local credit, except for the fact that technically they are obligations of local political subdivisions, it seemed entirely proper to provide for a withdrawal of the tax exemption from this type of obligation.

Fourth, the volume of obligations of this character which would be placed upon the market within the next few years, as a result of a program authorized by S. 138, would be quite substantial. It might amount to as much as 50 percent of the outstanding obligations, both long and short term, issued by States and political subdivisions thereof for all purposes.

Taking into consideration the fact that over the next several years the States and the political subdivisions thereof will be issuing substantial amounts of their tax-exempt obligations, backed by their own local credit and in no sense the equivalent of direct Federal obligations, as are the obligations issued by local public agencies in connection with the slum clearance and low-rent public housing programs, it would certainly appear that a substantial number of lower-tax-bracket investors will have to be relied upon to supply the necessary market for forthcoming State and local issues.

In order to attract a large enough investment in total, the yield on tax-exempt issues would have to rise enough to attract investors whose incomes are not as high as those who benefit from the present levels of yield. Obviously the larger the supply of tax-exempt securities, the larger the share of benefit received by high-tax-bracket investors and the smaller the share received by the States and their political subdivisions.

The result would therefore be that, not only would the interest costs in connection with the federally aided programs of slum clearance and low-rent public housing authorized by S. 138 be increased, but the cost to the States and political subdivisions of obtaining funds for necessary public purposes by the issuance of their own obligations backed by their own local credit would be increased.

In short, the tax exemption in connection with obligations issued by local public agencies for these slum-clearance and low-rent public-housing programs will not only cost the Federal Government more money, it will also cost the cities more money.

Fifth, as indicated above, such tax-exempt securities are attractive investments principally to high-income-tax bracket investors. Accordingly, these federally aided slum-clearance and public-housing programs will furnish to such investors a sizable and most attractive outlet for their funds, for not only are such obligations exempt from Federal income taxes, but they are relatively riskless investments.

Yet it is the very investors who find these securities attractive as tax-exempt riskless investments who are best able to supply the venture capital needed by business enterprise. Thus it makes it more difficult for new or expanding business enterprises to obtain necessary venture capital. (Pp. 128–129, hearings.)

Americans Imprisoned by Red China

EXTENSION OF REMARKS
OF
HON. EMILIO Q. DADDARIO
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 3, 1959

Mr. DADDARIO. Mr. Speaker, the following House Joint Resolution 47, concerning the release of Americans imprisoned by Red China, introduced by Mr. Hogan, of Bristol, Conn., was read and adopted by the House of Representatives of the Connecticut State General Assembly:

Resolved by this assembly—

Whereas on November 23, 1954, the Peiping government in China sentenced the following-named Americans on alleged charges of espionage: John Thomas Downey, of New Britain, life imprisonment; Richard G. Fecteau, 10 years; Col. John Knox Arnold, Jr., 10 years; Maj. William H. Baumer, 8 years; Eugene John Vaadi, 6 years; Capt. Elmer F. Llewellyn, 5 years; Lt. Wallace L. Brown, 5 years; Lt. John Buck, 4 years; Airman Steve E. Kaba, Jr., 4 years; Airman Harry M. Bergaman, 4 years; Airman John W. Thomas, 4 years; Airman Daniel C. Schmidt, 4 years; Sgt. Howard W. Brown, 4 years; and

Whereas no foundation of proof of such charges has been established and said charges have been denied by the U.S. Government: Now, therefore, be it

Resolved, That the 1959 General Assembly of the State of Connecticut recommend that President Dwight D. Eisenhower use all the prestige and authority vested in his office as President of the United States to enact the immediate release of John Downey, of New Britain, Conn., and all other American prisoners now being held by the Communist government; and be it further

Resolved, That the clerks of the House and Senate cause copies of the resolution to be sent to the Honorable Dwight D. Eisenhower and the Members of the U.S. Senate and House of Representatives from Connecticut.

Address of Samuel S. Stratton, of New York, at the Democratic National Victory Dinner, Sheraton Park Hotel, Washington, D.C., February 28, 1959

EXTENSION OF REMARKS
OF
HON. JOHN W. McCORMACK
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 3, 1959

Mr. McCORMACK. Mr. Speaker, on Saturday evening, February 28, 1959 there was held at the Sheraton Park Hotel a tremendous Democratic national victory dinner, which dinner was a great success. Among those who spoke at the dinner was our distinguished colleague, from New York, Mr. STRATTON, who made an outstanding address, which address was received with great enthusiasm.

Congressman STRATTON well said:

And yet the astounding fact is that last fall, in district after district, for all of our individual differences, people who never voted for a Democrat before in their lives, helped to elect Democratic Congressmen, Senators, and Governors. Why? Well, I think it was because people in all walks of life, people in both major political parties, big people as well as little people, even the farmers and small businessmen and workers of traditionally Republican upstate New York, turned to the Democratic candidates, not just because of a party label, but because all these people were desperately hungry, in such dark and critical days, for dynamic, energetic, creative, courageous and fresh political leadership in America. Disheartened, disillusioned, and disappointed with the past, they turned last fall almost as one to the candidates and the party that

seemed to them to speak directly to their personal need.

His broad national outlook is also evidenced by the following nonpartisan remarks:

There can be no room today for narrow partisanship or for doctrinaire dogma. Ours must be a fresh, positive program that believes in the future of our land—one that is not tired, not discouraged, not obsessed with false shadows from the past—one which refuses to let America settle weakly for second place in the race for world survival but which is determined instead to see America grow into an even greater and a stronger land, where all may live together in freedom and in peace.

Mr. Speaker, in my extension of remarks I include the able address made by the gentleman from New York, Mr. STRATTON.

Commissioner Donohue, Bishop Hannan, Rabbi Siegel, Speaker Rayburn, distinguished guests, fellow Democrats, and those discriminating and farsighted Republicans you brought with you, you may recall that when Winston Churchill addressed a joint session of Congress in the early days of World War II he remarked, "If my father had been an American and my mother a Britisher, instead of the other way around, I might have made it into these halls on my own."

I know I speak for all my freshman colleagues in the House when I say that the possibility of making it into Congress on ones own is indeed one of the more magnificent features of the heritage of every American citizen. Those of us who were lucky enough to make it here last fall, not on our own exactly but with all kinds of help from all kinds of wonderful people, are already beginning to wonder just how we did it. Some of us may even be wondering how we are going to be able to do it again.

No one freshman Congressman, of course, can presume to speak for all of us. Each of our races was unique. People have asked me how, as the Democratic mayor of a Republican city that hadn't sent a Democrat to Congress in 42 years, I ever got elected. Well, the answer, I tell them, is very simple: I made myself so objectionable, they had to send me to Congress to get me out of town.

"Don't you miss being a big frog in a small puddle?" some have said, "now that you're such a small frog in such a big puddle?" Well, that's an easy one to answer too. Frankly, a mayor's job is all right, but I think it's wonderful just to be in the majority for a change. And such a big majority too.

You know, as mayor of Schenectady, I couldn't even promote myself a place to park in around city hall. So you can imagine the thrill I had the first day I arrived down here to see those signs around the House Office Building, "Reserved for Members of Congress." I drove right up there and parked, even before we had on our special tags. "Hey, you can't park here," the cop told me, "those are for Members of Congress." "Well," I said, "I'm a Member of Congress." "Oh, yeah," the cop said. You know, for a moment, I felt right at home.

And yet the astounding fact is that last fall, in district after district, for all of our individual differences, people who never voted for a Democrat before in their lives, helped to elect Democratic Congressmen, Senators, and Governors. Why? Well, I think it was because people in all walks of life, people in both major political parties, big people as well as little people, even the farmers and small businessmen and workers of traditionally Republican upstate New York, turned to the Democratic candidates, not just because of a party label, but because all these people were desperately hungry, in such dark and critical days, for dynamic, energetic, creative, courageous, and fresh political leadership in America. Disheartened, disillusioned, and disappointed with the past, they turned last fall almost as one to the candidates and the party that seemed to them to speak directly to their personal need.

And so tonight as we gather, quite properly, to celebrate our amazing victories of 1958, let us Democrats not lose sight of the fact that in our triumph we have also inherited a profound and far-reaching and solemn challenge.

For I am deeply convinced that the American people turned to Democratic leadership last fall because they realized that in Speaker SAM RAYBURN and in Senator LYNDON JOHNSON was embodied the kind of sober, responsible, forthright, and forward-looking and energetic national leadership that they were seeking.

So it is for us, the rank and file members of the 86th Congress, working together in the days ahead, to bring the promise of that new leadership to real fulfillment in a constructive legislative program designed for all America.

There can be no room today for narrow partisanship or for doctrinaire dogma. Ours must be a fresh, positive program that believes in the future of our land—one that is not tired, not discouraged, not obsessed with false shadows from the past—one which refuses to let America settle weakly for second place in the race for world survival but which is determined instead to see America grow into an even greater and a stronger land, where all may live together in freedom and in peace.

If, as I believe, we Democrats of the 86th Congress do move forward to build just that kind of courageous and dynamic program, then we as a party need have no doubts that we will elect both a Democratic Congress and a Democratic President in 1960.

And when that happens—you and I will have won victory again, not just for ourselves, not just for our glorious party, but—what is even more important—for the future of the American people and for all who love liberty, wherever they may be.

Tax Relief for Retired People

EXTENSION OF REMARKS
OF
HON. ANCHER NELSEN
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 3, 1959

Mr. NELSEN. Mr. Speaker, there is little doubt that one of the most serious threats to the security of the retired people of our country has been the inflationary trends that have melted away their retirement equities, and which have driven taxes to new high levels on their little homes, creating a situation which is admittedly serious.

In the February 26 issue of the Mankato Free Press, of Mankato, Minn., a column written by Franklin Rogers, editor, proposes a plan which has merit and in inserting this into the RECORD it is my hope that it will stimulate some thought in the direction proposed in the article. I realize that to a great extent this will be an approach which must be treated by local and State authorities, but the matter deserves attention and examination at this level.

Mr. Speaker, under the leave to extend my remarks in the RECORD, I include the following article:

TAX RELIEF FOR RETIRED PEOPLE
(By Franklin Rogers)

Now that things have quieted down a bit in the commotion over real estate taxes, we have another idea to toss into the hopper. Isn't it time we considered giving a special tax reduction to older homeowners?

When you get down to the most pertinent facts, it's the people living on pensions and fixed income who are hurt the most by both taxes and inflation. They're practically helpless against a growing threat to their financial security.

The man who has reached retirement age—probably 65—and has been told by his employer that he now will be obliged to go on social security is the fellow who can't stand a sharp tax boost. In many cases he has worked long years to get his home paid for, and it's just about the only thing he has—except for his pension—to protect him.

But then comes a 10 percent increase in his tax load, probably followed by another 10 percent—or perhaps even 20 or 30 percent—in the next year or two. His income, which was none too robust at the start of his retirement, stays the same.

It's just about like taking food off his table.

To add to his feeling of helplessness, in many cases he may not feel physically up to the task of going before the assessor, or the equalization board, in an effort to get relief. He is virtually forced to stand still and take it.

If he sells his home, where will he go? He has battled through his productive years for the security a home provides, and then finds his well-being threatened by something for which he isn't responsible. The new generation tells him he's too old to work, but young enough to pay for the things that ostensibly are going to bring better streets, new schools, paved highways and recreation facilities for the lengthening hours of leisure time.

He is caught in the maelstrom of economic progress while trying to live on a modest income.

Take, for example, a man and wife who retire and plan on perhaps $12 a month for real estate taxes. What happens when it goes to $15 a month, or possibly $20? It takes $3 to 8 a month away from the food money. In the case of an older couple, that will buy a pretty sizable percentage of their grocery needs.

How to avoid this may be a problem. But it might not be a bad idea to freeze the taxes on a home as soon as the owner retires. Then, as long as he lives there and continues to own the home, there will be no increase. In that way he can be sure of at least the size of his taxload when he works out his retirement budget.

The total cost to any community wouldn't be great, and the good it would do for the retired generation would be well worth whatever the outlay totaled for the younger people. It is hardly fair to go on boosting the taxload for people whose income, through no fault of their own, remains unchanged.

A Fine Address by Governor Underwood, of West Virginia

EXTENSION OF REMARKS
OF
HON. KEN HECHLER
OF WEST VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 3, 1959

Mr. HECHLER. Mr. Speaker, one of the largest and finest newspapers in West

Virginia, the Charleston Gazette, has an editorial which I commend to the attention of all Members. I intend to stick to my guns and on every possible occasion call attention to the accomplishments, developments, and problems of West Virginia, so that more people will get to know my home State better. I am proud of West Virginia and intend to be an active and not an inactive Congressman on behalf of my State and the welfare of our great country. At advertising rates, the following able editorial would have cost me $43.88:

THE RECORD: HOT AIR ALONG THE POTOMAC

U.S. Representative KEN HECHLER apparently is determined to establish some sort of freshman record for inserting editorials, speeches, and just plain nonsense in the CONGRESSIONAL RECORD.

This is an honor we'd just as soon see our Congressmen and Senators avoid. If what they have to say or to repeat is worthy, the chances are that the basic news media will give full and ample coverage at considerable saving to the taxpayer.

We've found that the public servants who act let their actions speak for themselves, while the windbags and the professional hacks can usually be spotted in the RECORD under "Extemporaneous remarks." Having nothing better to do or to offer, they serve their constituents only on paper in the pages of a manual which is tiresome, expensive, and, more often than not, meaningless.

Mr. Speaker, under unanimous consent, I ask to have printed an outstanding message to the West Virginia State Legislature by Gov. Cecil Underwood. The Governor has performed a great service in analyzing the economic situation which we face in West Virginia, and I commend him for his vigorous statement, which indicates that West Virginians are united in their determination to solve our economic problems.

SPECIAL MESSAGE OF GOV. CECIL H. UNDERWOOD, OF WEST VIRGINIA, TO A JOINT SESSION OF THE 54TH LEGISLATURE ON FEBRUARY 25, 1949

Six weeks ago this very afternoon, I addressed your opening session. Today I appear before you in the solemnity cast by the lengthening shadow of West Virginia's economic crisis.

I have not come to talk about passing pleasantries or suggest easy answers. I will take little of your time. But I am compelled to speak again about the dire need of many of our citizens and suggest again something for their good.

All of you remember the old story of the little boy who cried wolf so often that, when the wolf actually came, he was ignored. The crisis in West Virginia has been many years coming to this crucial point. During these years, many people have recognized and warned of this impending danger. Inadvertently, we have become accustomed to these warnings. I sincerely hope these repeated cries of wolf—the wolf which was just over the hill—will not now obscure the clear and present danger we face. For now the wolf is literally at our door.

Here in the State capitol, in the legislative chambers, or in the hotel rooms, the situation perhaps seems less desperate. But we have only to drive past the employment office on Kanawha Boulevard to see hundreds of people daily standing in line waiting for employment benefits or, hopefully, a new job. We have only to go into counties nearby to see families who are hungry and cold—living in despair about the future.

We who hold responsible positions in the State government must contemplate the aftermath of these conditions on our future. In some areas of our State, the entire economy is almost at a standstill; in others, it will shortly come to such an impasse—unless we take immediate and positive action.

UNEMPLOYMENT STATISTICS

Each week you have been in session, the unemployment statistics have become more alarming. On January 14, I spoke about 42,000 workers who had exhausted their regular unemployment benefits; today, that number is 50,000. Six weeks ago, 32,000 had qualified for temporary unemployment benefits; now the number exceeds 36,000. In the same 6 weeks, another 4,000 have exhausted these extended funds, and on March 31 the TUC benefits all expire.

During the month of January 1959, 12,225 workers filed initial claims and drew their first unemployment payments. These disturbing numbers reflect the continuing efforts of industry to reduce employment. This is not a depression, it is an industrial revolution unless we heed these warnings, we may soon have other revolutionary problems on our hands. The fear of starvation can drive hungry people to desperate actions.

Last month, I emphasized two lines of attack on this problem: Immediate jobs for the unemployed, and long-range planning to rehabilitate our State economy. To me, these factors are still self-evident. We must give these people help—not by dole, but by work; we must improve our economy—not by haphazard spasms, but by planned development.

Earlier, I recommended several measures to provide immediate relief to our distressed conditions. I am not here to criticize the legislature; but I am here to be plain spoken. In 6 weeks, not a single bill has reached my desk which will produce a single job for a single unemployed person or provide any measure of relief for the economy.

IMMEDIATE JOBS

Frankly, I know of no other way in which the State can produce substantial numbers of jobs than through an extensive highway construction program. How better can we prime our economic pump than to provide the funds to match the approximately $130 million of unused Federal aid cash which is available for highway use in West Virginia. Federal aid does us no good as long as it lies in the Federal Treasury.

We must also remember that virtually all of our vast secondary road system is not included in the Federal aid program. These roads are our responsibility. We can put thousands of people to work now if we will undertake to do what is needed on the secondary roads alone. West Virginia needs these roads, our people need work—so, I ask you, what better service can we perform than to meet this need?

I understand the senate has passed and the house of delegates is now considering measures to raise approximately $8 million in road revenue. This is a commendable and splendid start—but it will not solve the problem. It will provide scarcely more revenue than was available last year. In 1958, the State sold $10 million of revolving road bonds, this source will be much less in 1959. If we are to do what needs to be done, greater efforts must be exerted. I know you have been confronted with countless problems, and I know these halls and corridors echo with cries of poverty from every vested interest.

May I remind you of what our senior U.S. Senator, JENNINGS RANDOLPH, said in Charleston only a week ago tonight? He told his audience, "Our Nation did not achieve its present greatness by saying 'we can't afford it'."

You have my program for producing jobs and improving the State's economy. I am not insisting that this is the only program or that it is perfect. I do say the time has come for you to pass this or some program to save our State.

ECONOMIC RECOVERY AGENCY

As important as these measures are, they meet only part of our need. We cannot expect forever to maintain an economy on public works.

We must restore our economic health over a longer period of time through the proper utilization of our natural and human resources, through the development of our industrial potential, through the wise use of our natural advantages, and through the attraction of industry and tourists. The economy of West Virginia must be built on a sound, natural basis, not an inflated, artificial edifice.

To meet this need, comprehensive, long-range planning is a must requirement. Accordingly, in my first message, I recommended the creation of an economic recovery agency, staffed with outstanding leaders of West Virginia and provided with permanent facilities to do comprehensive planning.

I said then that Federal aid would probably be available for some of this work. Purposely, I have delayed presenting the final draft of this legislation until I could be more specific about Federal participation. I am happy to advise you that at least two departments of the Federal Government will support certain phases of these studies.

On your desks this afternoon is a copy of a bill to create an economic recovery agency. You may wonder why this name has been used. As I indicated in my earlier message, I hope that the remaining 4 years of our State's first century will be the time when we can recover from the present economic illness and find the way to stabilize our future against this kind of threat. It is my hope that this agency will be so effective in the next 4 years that it can then be renamed and that we will no longer need to refer to the word "recovery."

This proposal contemplates the creation of a nine-member board to succeed our present State planning board, which has been only a paper organization for more than a decade. It will be my devoted purpose to bring the State's best brains and talent to the membership of this agency. I have in mind the caliber of people comparable to those who have served the Nation on such important task forces as the Hoover Commission.

The agency will be empowered to employ an executive director who is qualified in the fields of State, local, and national economic planning and community development. This director and his staff will coordinate and supervise the research and study of many unrelated groups and individuals in other agencies, departments, and organizations of government.

The primary duty of the agency will be to prepare and maintain a master plan for the physical, social, and economic development of West Virginia. Let me make it clear that I do not propose to replace or supplant the work of any department of the State government with this agency. On the contrary, its work will serve the other departments and provide them with valuable and useful information for their particular responsibilities.

This agency will be able to serve many private industrial and economic development groups. It can also provide much needed service to counties and cities.

Considerable Federal aid is currently available to our smaller municipalities which undertake projects in urban renewal and city planning. This aid, however, must be received by a State agency working with these local governments. Already two West Virginia cities have lost this Federal aid because the existing planning board could not function. Even without funds for its operation, the State planning board has now

processed an application for the city of Keyser with the Federal housing authorities. The proposed economic recovery agency can immediately serve in this capacity and help many other cities to obtain this kind of aid.

The Congress now has many bills under consideration to provide economic aid for distressed areas. No one can say with certainty what bill may ultimately pass the Congress. I am advised by competent Federal authorities that the proposed draft of this bill is sufficiently broad to serve as a receiving agency for any of the measures now before Congress. All of these proposals provide Federal aid of some kind, but require in every instance that it be matched from State or local sources and that the Federal money be channeled through a State agency. Adoption of this measure at this session could easily avoid the necessity of an extraordinary session if Congress later enacts a depressed-area measure.

Immediately it will be possible for the agency to begin two important and vital studies, manpower skills and land use. In my opinion, these are basic to any long-range planning. I am assured that the Department of Labor and the Office of Civil and Defense Mobilization will jointly support the manpower skills study to the extent of $100,000. Our best current estimates indicate that both of these studies will require in excess of $200,000 of additional State money. I therefore recommend that this agency be given an appropriation of $250,000 to carry on its work and support our share of these studies. It will be futile to undertake this important work unless it is adequately financed.

I know the Federal Government will help us wherever it can. But I must warn you, the Federal Government will not solve all of our problems for us. Our economic ills are not peculiar to West Virginia alone. To mention only a few others—the State of Michigan is collecting taxes in advance in order to pay its current bills; the State of Pennsylvania has bankrupted its employment security reserve fund; the Governor of Massachusetts has called upon the President to send a factfinding commission to survey his State's economic distress. Compared with us, these are big and powerful States.

Let us act while there is yet time. I recommend these measures today with a strong sense of urgency. I recommend them for your constituents who are victims of economic adjustment and industrial revolution—who are cold, hungry, and poor. I earnestly feel we can do no less for them and for our State.

The Facts of Life in a Distressed Area

EXTENSION OF REMARKS
OF

HON. JAMES C. OLIVER

OF MAINE

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 3, 1959

Mr. OLIVER. Mr. Speaker, Mr. Michael Schoonjans, Biddeford-Saco, Maine, regional representative of the Textile Workers Union of America, recently testified before the Senate Banking and Currency Committee in support of Senator DOUGLAS' bill to provide aid for the Nation's distressed areas.

I commend Mr. Schoonjans for the relentless efforts he has made to solve the unemployment problem which has paralyzed the Biddeford region since 1954. I am proud to be associated with him in the struggle to provide a means of livelihood for those so grieviously affected by the economic recession.

The text of Mr. Schoonjans' testimony follows:

TESTIMONY BY MICHAEL SCHOONJANS, DIRECTOR, BIDDEFORD-SACO JOINT BOARD, TEXTILE WORKERS UNION OF AMERICA, AFL–CIO, BEFORE THE BANKING AND CURRENCY COMMITTEE, THURSDAY, FEBRUARY 26, 1959, IN SUPPORT OF S. 722

Mr. Chairman, Honorable Senators of the Banking and Currency Committee, my presentation today concerns the Biddeford-Saco-Old Orchard Beach, Maine, area.

The men and women in the textile mills of Maine whom I represent are suffering. But they are today, and have been for years, actively and untiringly trying to help themselves. We appeal for governmental assistance. Meanwhile, we are doing everything possible to alleviate the continued chronic unemployment situation in this part of Maine.

Over these years, since our economic decline began, thousands of words have been written and presented at various hearings before State and Federal Government committees. Up to this day, all we have received in return is more words but no action. I have copies with me here of some of our communications and testimony. The entire package of all our communications and testimony would be too bulky to go through at this hearing; suffice it to say that I have most of the pertinent material with me and I will be very happy to leave this with the committee for their consideration.

The Biddeford-Saco-Old Orchard Beach area has been a serious and chronic unemployment area for many, many years and now it's at its lowest point. I have with me the employment and payroll figures for December 1956–1957–1958, that I will leave with the secretary of this committee. Please note that the weekly payroll has dropped from a high of over $414,280.54 per week in 1956 to $164,000 on week ending December 26, 1958; a loss of over a quarter of a million dollars per week.

While the rest of the Nation is reported in the press to be enjoying a rapid recovery from the recent nationwide recession, the unemployed worker in the State of Maine is worse off than he ever was. Unemployment during the period from May 1958, until the present time, in the Biddeford-Saco-Old Orchard Beach area, has risen tremendously. The number of jobs available in the Biddeford-Saco-Old Orchard Beach area is at its lowest point since July 1, 1948, when there were 8 major industrial concerns in these neighboring cities employing 10,027 workers. On December 28, 1956, there were 6,739 jobs in 8 industrial concerns, but on week ending December 27, 1957, there were 4,814 jobs. However, on December 26, 1958, there were 2,893 jobs in 7 industrial concerns, a loss since July 1, 1948, of 7,134 jobs.

When jobs are eliminated, payroll income in the community declines. On July 1, 1948, the weekly payroll in the Biddeford-Saco area was $581,892.73 from 8 industrial concerns. For week ending December 26, 1958, the weekly payroll from 7 industrial concerns was $164,099.64, a loss of $417,792.91 in the weekly payroll of these communities.

For week ending January 24, 1959, 7,673 State of Maine workers who had exhausted their unemployment checks of which 1,366 are in the Biddeford-Saco area. Incidentally, the total amount of funds available in the State reserves for unemployment benefits at the end of December 1958, was $35,207,704.83.

As of the 28th day of January 1959, there were 3,604 workers registered for work at the Biddeford Employment Security Office. This figure does not include the small army of workers and families who have been forced to move to other parts of the Nation as a direct result of the prolonged depression. According to a census taken by the clergy of this area, in their respective parishes, of up to and including April 1958, but not including families who have moved since this census was taken—both Catholic and Protestants—show that 595 affiliated families had, up to that time, been forced to seek employment elsewhere. When you consider that the average family consists of 4, this means that 2,380 people have moved out of the area up to and including April 1958. These are, for the most part, the younger, highly skilled workers who only wait for the day when this area will be the industrial area it once was and will be again greater than ever before to return to the State of Maine.

There are presently, in the city of Biddeford, 3,712 persons eligible for general and surplus food relief. In 1956, there were 421 persons on general and surplus relief in this city. In the city of Saco, for the month of December, the number of persons on general and surplus food relief was 1,439. In the town of Old Orchard, a very small community, the number of people on general and surplus food relief is approximately 600.

We have been trying to get an increase in the variety of surplus food for these unfortunate people, but we have not succeeded. In fact, one day the welfare departments received a notice stating that the present allotment per person would be increased, and then the very same welfare department heads were told shortly afterward that the cheese allocation would be eliminated.

I want to talk for a minute now about what I feel is a ray of light in the gloomy situation confronting us in our area. This is the determined effort everyone concerned is making to find a way to replace the liquidated jobs. The entire community is seeking new industries to replace those jobs that have been liquidated. There is presently a local campaign to purchase the now empty Saco-Lowell Biddeford properties consisting of approximately 1 million square feet of manufacturing space. The main business of this company has been the manufacture of textile machinery.

To obtain this space we need:

Proposed purchase price	$300,000
Cost of 3 years' operating expense	140,000
Capital improvements	75,000
Total requirement	525,000
First mortgage (4 local banks)	200,000
Second mortgage (standby credit)	75,000
Public subcription to development fund (of which Saco-Lowell will take $100,000)	250,000
Total	525,000

My own union to date has contributed $1,500 to this cause. This proves that we are willing to help ourselves; but if the area redevelopment bill, S. 722, as proposed by Senator DOUGLAS, of Illinois, were adopted by both branches of Congress and signed into law by the President of the United States, it would hasten the day when the Biddeford-Saco-Old Orchard Beach area would again be the prosperous communities they once were.

It is the opinion of many of our unemployed workers that our present administration in Washington is more concerned with the economic conditions of foreign countries than the economic conditions of some areas in the United States.

It is quite difficult to explain to hungry unemployed workers, heads of families, the position that our own Government takes in helping to improve the economic conditions of foreign countries. While the Maine textile workers are willing to have our Govern-

ment help out the free nations of the world, they cannot understand our Federal Government handing out another $130 million to the dictator of Yugoslavia, Marshal Tito, to improve the economic climate in his country. This $130 million is in addition to the $1,600 million that has been given to this communistic dictator.

All our past efforts to bring the suffering of our unemployed American workers to the attention of our administration in Washington seems to have fallen on deaf ears. It isn't that we haven't tried to help ourselves or that these workers haven't made any sacrifices. The facts are that these workers have cooperated in the past and are continuing to cooperate at present with industry.

COOPERATION WITH EMPLOYERS

In the case of the liquidated Bates Manufacturing Co., York division, the workers who were employed in this plant cooperated to the tune of $395,574.40 labor-costs savings between collective-bargaining agreements. At the Pepperell Manufacturing Co., a cotton mill employing 2,000 workers and still in operation, these workers without the benefit of modern machinery have increased their workloads to a backbreaking point. We are now saving this company $853,199.36 in labor costs per year. All these sacrifices have been made without the benefit of technological improvements and has been through additional efforts on the part of the employees themselves. We ask, How much longer can they continue to sacrifice for the pitiful wages being paid? The Maine industrial straight-time average hourly earnings are $1.67; the national straight-time average hourly earnings are $2.17 an hour, yet the average straight-time hourly earnings of the textile workers are only $1.41 an hour.

With these low wages, it takes a husband and wife, and sometimes grown children, to become wage earners so that the family may realize a little bit of our American standard of living. The husband works for the food of his family and the wife works on the third shift in order to meet payments on a secondhand automobile, a television, a refrigerator, and in some cases a washing machine. I am merely bringing this out to you, honorable gentlemen of the committee, to show you that when these workers become unemployed they have very little or nothing to fall back on.

The Biddeford-Saco-Old Orchard Beach area has been a chronic unemployment area for many, many years, and while these people would appreciate any help given them by our Federal Government they are first proud people and want an opportunity to work rather than being given a handout.

Many of these families are broken up for weeks on end with many heads of families commuting many miles from home to seek employment. Some have been successful in other areas of our Nation, but many more have moved their entire families to other sections. There are many whose roots are deep and continue to commute to these distant places with the hope that some day they will have job opportunities in their own area and will be able to live a normal American life with their families. The adoption of S. 722 would, we are sure, help to bring a better future for these unfortunate workers.

Our working forces are highly skilled, conscientious workers, and this can be proven because in the case of the Saco-Lowell Shops, makers of the world's best textile machinery and formerly the largest employer in our community, at one time employing over 5,000 workers now reduced to less than 300 workers. We hereby list sample of nontextile products manufactured by this company since World War II:

1. Magneto rotors for B–29 bombers.
2. Firing control units for 90-mm. antiaircraft guns.
3. Ford universal carriers.
4. Parts for proximity fuses.
5. Rocket projectiles for planes.
6. Twisters for rayon heavy-duty fibers used on bombers, trucks, etc.
7. M–3 50-cal. machinegun.
8. M–1919A6 30-cal. machinegun.
9. M–37 30-cal. machinegun.
10. Operating rod for Garand rifle.
11. Universal joint for Ford Motor Co.
12. Exhaust control valve for Ford Motor Co.
13. Rear axle shaft and differential gear cases (Ford).
14. Oil pumps for Ford Motor Co.
15. Miscellaneous service parts for Chrysler Corp.
16. Miscellaneous service parts for General Motors.
17. Drive shaft flanges for Ford Motor Co.
18. Elliott addressing machines (2 models).
19. Canopener parts for Edlund Co.
20. Miscellaneous gears for Boston Gear Works.
21. Filter caps for Commercial Filter Co.
22. Miter gear and rail-raising brackets and miscellaneous parts for Bullard Co.
23. Autometics gear housings for Jones and Lamson Co.
24. Automotive muffler (18 basic models).

The reputation of the Saco-Lowell Shops in producing the M–3 .50-caliber machinegun, the M–919A6 .30-caliber machinegun, the M–37 .30-caliber machinegun, the operating rod for Garand rifle is well known to the Ordnance Procurement Department of our Federal Government. This company is presently awaiting a decision by the Assistant Secretary of the Army, Mr. Frank Higgins, the results of their recent bid on the M–60 machinegun prime contract which as we understand it is now on Mr. Higgins' desk. The awarding of any ordnance work to this deserving company would bring hope instead of despair to the residents of our distressed communities. This company has the know-how, the ability, and the energy. We can supply the workers to produce and manufacture much of our defense requirements.

This company has a modern plant located in Saco; a one-story building and presently using only 40 percent of the 282,000 square feet of manufacturing space.

This piece of legislation before you would certainly be a great help to this chronically distressed area. We, the people of Biddeford-Saco-Old Orchard, are deeply grateful for the untiring efforts of Senator DOUGLAS and his colleagues in pressing for this legislation. When the President of the United States vetoed the distressed area bill last fall, the people of the Biddeford-Saco-Old Orchard Beach communities were stunned and shocked. However, hope springs eternal in the breast of the human being and we are now saying to ourselves that this year when the Congress adopts S. 722 the President of the United States will see fit to sign it.

Outstanding Federal Administrator and Federal Employee for the Year 1958

EXTENSION OF REMARKS

OF

HON. THADDEUS M. MACHROWICZ

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 3, 1959

Mr. MACHROWICZ. Mr. Speaker, the Federal Business Association of Detroit grants annual awards to the outstanding Federal administrator and the Federal employee of the year.

On February 24, 1959, at the Veterans Memorial Building in Detroit, awards for the year 1958 were made to William T. Hunt, an outstanding Federal administrator and to Herbert S. Hubbs as outstanding Federal employee for the year 1958.

I believe this practice of the Federal Business Association of Detroit to be a very worthy one and conducive to the promotion of higher standards in Federal service. I congratulate the association on its practice and also the recipients on the honor bestowed upon them.

Mr. Hunt, manager, Michigan field office, U.S. Department of Commerce, at Detroit, was born in Arkansas and reared in Indian Territory, now Oklahoma. He enlisted in the Army in June 1917 and served 2 years overseas. Mr. Hunt was American Vice Consul in Barbados, West Indies, from 1920 to 1923. From 1924 to 1945 he had responsible domestic and foreign positions in private industry, including domestic production and sales management, and establishment of distribution and plants throughout Europe.

Joining the Department of Commerce in 1945 as assistant manager of the Detroit office, he was promoted to manager in 1946. His office has been most active in serving all business and the public in development and promotion of domestic and foreign trade.

During the Korean war, the National Production Authority under Commerce controlled the production, distribution, and use of strategic materials and promoted conservation. Mr. Hunt organ-

ized and directed this important and complicated operation in Michigan.

Mr. Hunt was sent to Thailand by his Department from 1954 to 1955 on the first official marketing mission ever sent to a foreign nation in connection with an International Trade Fair. He is very active in many business and civic organizations, and holds and has held major offices in such groups.

Mr. Hubbs, shop superintendent, post ordnance, Fort Wayne, was born April 16, 1902, at Knoxville, Tenn. He has been a resident of the Detroit area since 1926.

He entered military service in February 1942 and immediately following his discharge in May 1945 he entered civilian Government service as an auto mechanic at Fort Wayne. Mr. Hubb's ability was immediately recognized and within a short time he was promoted to the position of shop superintendent.

Mr. Hubbs established and carried through a safety program which resulted in the Ordnance Division receiving the Fort Wayne merit award for safety performance.

As area fire marshall he earned for the Ordnance Division the award for outstanding performance in fire prevention and protection for both 1957 and 1958. In addition, he has personally received several outstanding performance ratings and several commendations from officers under whose commands he served.

Ruble-Dollar War

EXTENSION OF REMARKS
OF
HON. HALE BOGGS
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 3, 1959

Mr. BOGGS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the Forwarder of Monday, February 23, 1959:

It is fairly common knowledge that in the ruble-dollar war the United States is taking it on the chin because of our foreign economic policy of peace by procrastination—in short, no discernible policy at all.

Because of their internal totalitarian organization, the Communists can manipulate various markets to suit their immediate and long-range purposes as opportunity presents. For example, according to S. J. Rundt, a specialist in the field, the Soviets have sold f.o.b. Russian port, cement to Portugal at 43 rubles a ton, but at 117 rubles to Red China. Belgium bought cellulose from the U.S.S.R. at 440 rubles per ton, but for the same product, Red China paid 1,275 rubles. This makes for tough competition, especially since the U.S.S.R. contrary to popular opinion, delivers promptly and pays for purchases on the dot.

There are many men in this country with plans aplenty on how to take the incentive in the trade war and make it stick. We cannot match Soviet financial machinations and still remain a democracy. But we have a weapon the Communists cannot match and still remain totalitarian. We have private enterprise and initiative, and all it needs is for us to get off our procrastinating "buts" and turn it loose.

We have huge financial organizations for overseas operations, such as the Eximbank, the World Bank, the Development Loan Fund and so on, but these are unwieldy giants incapable of swift movement and individual action in a fast breaking market.

In our opinion, H.R. 5 provides the answer.

H.R. 5 is a measure sponsored by Representative HALE BOGGS, Democrat, of Louisiana, to liberalize tax treatment of foreign-investment income.

Recently at a New York Board of Trade, International section, luncheon, Mr. BOGGS said that a major aim of the measure is to encourage the addition, or substitution of, private investment for foreign aid. It would permit freer transfer and reinvestment of capital in operations abroad and defer taxes on earnings until repatriated in dividends.

Chief tax benefit under the will would be a 14-point reduction in the corporation tax rate on income of foreign-based corporations. This is nothing startling since it is merely a worldwide extension of the similar benefit provided since 1942 to Western Hemisphere corporations.

In the face of the Soviet ruble offensive it is difficult to understand why this has not been done long since.

Lithuania

EXTENSION OF REMARKS
OF
HON. MARTHA W. GRIFFITHS
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 3, 1959

Mrs. GRIFFITHS. Mr. Speaker, the following proclamation recites a tragic situation that has existed for years. Three million people have long been deprived of their freedom and liberty by force.

I am proud to submit this proclamation in hopes that Lithuanian independence will soon be a reality.

During the 41st commemoration of the reinstatement declaration of Lithuanian's independence, sponsored by the Detroit Lithuanian Organization Center, held at Western High School, 1500 Scotten Avenue, Detroit, Mich., on February 15, 1959, the following resolution was unanimously adopted:

"Whereas in June 1940, Soviet Russia did invade the sovereign independent Republic of Lithuania with armed forces to "protect" Lithuanian independence and, against the will of the people, annex her to the Soviet Union; and

"Whereas the armed forces of the Soviet Union are still presently residing in Lithuania in complete and total disregard of the agreements, policies, and treaties which existed between the Soviet Union and other allies of World War II; and

"Whereas Russian Communists are still currently perpetrating deportations and exterminations of whole ethnic groups, plundering people and institutions, and separating the members of family, one from another: Therefore be it

"Resolved, That on this 41st anniversary, we express our deep gratitude to the Government of the United States for nonacknowledgment of the fabricated incorporation of the Baltic States into the Soviet Union and for allowing the many thousands of refugees to find new homes in this country; and be it further

"Resolved, That we respectfully recommend that our U.S. Government abstain from entrance into any alliance, pact, or agreement which would in any way whatsoever recognize the present day Russian Empire; and be it further

"Resolved, That our Government of the United States be urged to use all possible means to protect enslaved peoples from genocidal destruction and preserve their hope of eventual liberation; and be it finally

"Resolved, That a copy of this resolution signed by the presiding officers, be transmitted to the President of the United States, Secretary of State, U.S. Ambassador to the United Nations, Michigan State Governor, and U.S. Senators and Congressmen from the State of Michigan."

DETROIT LITHUANIAN ORGANIZATION CENTER.
ALFONSAS NAKAS, *President.*
JONAS GAIZUTIS, *Secretary.*

The Federal-Aid Highway Program and the Municipalities

EXTENSION OF REMARKS
OF
HON. FRANK W. BOYKIN
OF ALABAMA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 3, 1959

Mr. BOYKIN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include a statement made by the Honorable Joseph N. Langan, Commissioner of the city of Mobile, Ala., at a meeting on February 17 of the members of the legislative committee of the Alabama League of Municipalities with our Alabama congressional delegation. This meeting was called to discuss municipal problems, and Commissioner Langan's subject was "The Federal-Aid Highway Program and the Municipalities." Commissioner Langan is one of our outstanding municipal leaders in the State of Alabama. He has visited Washington several times in recent years in connection with the Federal super highway program as it affects the city of Mobile. I feel that our meeting was most beneficial and it was a real pleasure to have had these fine officials here in Washington with us:

THE FEDERAL-AID HIGHWAY PROGRAM AND THE MUNICIPALITIES

(By Joseph N. Langan, commissioner of Mobile, Ala.)

As far as I know there is no major highway legislation pending at this time before the Congress, but we do want to appear before you and restate our thinking and views on the overall highway program of the Nation as it affects the urban areas.

In adopting last year Public Law 85-767, Congress has set up a new and expanded highway law known as title 23, United States Code, highways. It is a codification and restatement of the Federal-aid and other highway laws. We commend you gentlemen for the part you played in the development of this more concise highway code.

HIGHWAY ACT OF 1958

In enacting the Highway Act of 1958, you approved major provisions that made possible:

1. An additional $400 million for fiscal 1959 for the immediate apportionment for projects to be undertaken on contracts awarded by the States before December 1, 1958, which provide for completion before December 1, 1959. While the $400 million was allocated to the States on the basis of 45 percent for the primary, 30 percent for

secondary, and 25 percent for urban extension of these systems, the States themselves were authorized to spend their share without limitation as to the percentage to be utilized on any one of these systems. The project costs were to be shared on a two-thirds Federal, one-third State basis.

2. In addition the bill provided for $150 million for loan purposes to the States to help them meet their share of the project costs. The amount loaned cannot exceed two-thirds of the State's share of the cost of the project and is to be repaid from future Federal aid allotments.

3. For the ABC systems (primary, secondary, and urban extensions) the 1958 bill provided $900 million for fiscal year 1960 and $925 million for fiscal 1961 on the basis of 50–50 matching.

4. For the Interstate System the law provides authorization for fiscal year 1959 of $2,200 million and for fiscal 1960 $2,500 million and fiscal 1961 $2,500 million.

5. The 1958 legislation suspended for fiscal year 1959 and fiscal 1960 section 209(g) of the Highway Revenue Act of 1956 (Byrd amendment), so that expenditures for highway purposes are not, during those 2 years, limited by the amount of money available to the highway trust fund.

6. The new law also established a new national policy "that it is in the public interest to encourage and assist the States to control the use of and improve the areas adjacent to the Interstate System by controlling outdoor advertising in those areas." Portions of the Interstate System which pass through municipalities are excluded from this provision. The Federal share of payment on the Interstate System is increased from 90 percent to 90.5 percent in those States participating in billboard control.

7. The new law amends the Federal Highway Act of 1956 by increasing from 5 to 7 years the period within which construction must commence on rights-of-way which are to be or have been acquired in anticipation of use with funds advanced for any of the Federal-aid highway systems, including the Interstate System.

In closing our summary of the highway legislation developments in 1958, let me point out that for the first time in 40 years all the Federal laws pertaining to Federal-aid highways are now available in one act. Since the passage of the first Federal-Aid Road Act of 1916, 40 separate highway laws have been enacted excluding appropriation bills.

It is to the everlasting credit of the 85th Congress that now all the many provisions of law are arranged in an orderly and logical sequence. While in the process it was necessary, in many instances, to make changes from the exact language used in prior enactments, with certain minor exceptions no substantive changes of law have been made.

PROGRESS SINCE PASSAGE OF 1956 LAW

You gentlemen will be interested in progress that has been made toward the goals anticipated in roadbuilding under the 1956 Federal-Aid Highway Act. I am happy to report to you that during the first 2 years of the accelerated program—July 1, 1956, to June 30, 1958—progress matched the schedules set annually. The 2-year goal of obligating $3,100 million of Federal funds for the Interstate System was surpassed by 5 percent; the goal of obligating nearly $1,700 million of the ABC funds (for primary, secondary, and urban connecting link roads) was exceeded by 3 percent. During the 2 years, construction contracts were completed on 1,771 miles of the Interstate System at a cost of $439 million and by June 30, 1958, construction estimated to cost $1,700 million was underway on 3,167 miles. In addition, nearly $1,500 million had been authorized or spent for preliminary engineering work and acquisition of rights-of-way.

In the regular ABC Federal-aid program, 42,491 miles of construction costing $2,500 million was completed in the 2 years mentioned and by June 30, 1958, a total of 23,330 more miles of construction, estimated to cost $2,200 million, was underway. The Federal-Aid Highway Act approved April 16, 1958, authorized, as I have already pointed out, a special $400 million for use on the Federal-aid primary and secondary systems to accelerate the program and stimulate employment. By the end of the last fiscal year $159 million of this fund was obligated and 358 miles of construction, estimated to cost $25 million, was underway.

WHAT FEDERAL AID MEANS TO THE MUNICIPALITIES

The cities and towns of Alabama and the balance of the Nation have, of course, a tremendous stake in Federal highway legislation. It has been said—and well said—that no other Federal-aid program can have, or has had, such a pervasive effect on the growth and development of the Nation's urban areas. The inadequacies of existing urban thoroughfares have become increasingly apparent as more and more rubber-tired vehicles have invaded municipal traffic ways. As the expanding urban population has settled in sprawling suburbs, municipal streets have had to absorb traffic originating well beyond the limits of the cities themselves. To an alarming extent, these traffic problems have ceased to be those of the municipalities alone and have more and more become areawide problems. They defy solution by the municipal governments alone. Congress has been constantly aware of this and has done something about it. The States have failed miserably to recognize the plight these problems develop for our municipalities. Had Congress not acted as wisely as it has in recent years, we simply would be years behind in modernization of our highway system; and the resulting economic losses to our cities, towns, States, and Nation would have been incalculable.

Problems of coordinating urban, suburban, semirural and intercity highway facilities daily become more acute. Increasing population migration into urban areas and the concurrent increase in the number of motor vehicles in use in these areas make it mandatory that Federal resources—both technical and financial—reflect the growing seriousness and immediacy of the overall transportation problem facing the municipalities and the Nation. As I have already intimated, in our judgment the most formidable and immediate of our transportation difficulties exist in and around our urban areas. And let me point out to you gentlemen, in speaking of transportation we are speaking of the movement of both people and goods. In urban areas the movement or goods is as important or perhaps in some instances more important than the movement of people. Our city, town, county, State, and Federal economy depends, to a very great extent, on the efficient movement of goods and people through our heavily populated town and city areas. It is our firm belief that the Federal Government and the respective States must devote a larger share of their efforts and resources to the solution of urban transportation problems. Our present Federal highway program is a good start from the Federal Government level. If our States will make as serious an effort to help solve the problem, we will in a few short years be well on our way to a brighter situation—and our cities and towns will be even more important as centers of trade, industry, and comfortable living.

In closing, let me thank this congressional delegation for its vision and its action in supporting legislation always designed to improve the well-being and the programs of our city and town governments.

Twaddle of a Far Different Kind

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 3, 1959

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following column by Mr. Joseph Alsop which appeared in the Washington Post and Times Herald of March 1, 1959:

TWADDLE OF A FAR DIFFERENT KIND
(By Joseph Alsop)

OFFUTT AIR FORCE BASE, OMAHA, NEBR.—This is a place no thinking American can visit without strong national feeling. Simply as a place it is dreary. Until just the other day, it had no role in history. But now it is the nerve center of the proudest, most powerful, most complex, and most efficient fighting force this Republic has ever brought together.

It may seem very odd indeed to use the word "beautiful" in connection with Strategic Air Command. But although great aircraft have replaced the lances and the gonfalons, this SAC has something of the beauty of an army with banners. It has another beauty, too, as a vast, marvelous, superbly functional product of men's minds, as perfect as it is terrible. And it has still another beauty, as the sword and buckler of the imperiled cause of freedom.

It is necessary to say these things because it is also necessary to face an ugly fact concerning SAC. The fault does not belong to the men of SAC. But the ugly fact remains: The once-sure power of the American deterrent is now quite rapidly declining.

The causes of this decline, and the remedies which can be applied, will be examined in subsequent reports in this series. What must first be done is to try to dispose of the false and self-serving argument that is being used to justify the decline in SAC's deterrent power.

The argument is often heard nowadays in the highest quarters in the Pentagon and at the National Security Council. It takes the form of what is called the theory of minimum deterrence. This theory is based upon a cruelly ironical feature of modern strategic weapons systems. In brief, a few big dirty bombs will kill a great many millions of the enemy. But very considerable numbers of bombs, extremely precisely laid down, are needed to destroy the complex, many-targeted structure of the enemy's nuclear striking power.

It is easier, in other words, to massacre half the population of another nation than it is to prevent that nation from striking back in its agony. Many fewer aircraft or missiles are needed for the first purpose than for the second. It is cheaper, more budget-balancing, and in every way more attractive to the peculiar cast of mind that regards the richest nation in history as too poor to defend itself.

Such, then, are the fairly macabre origins of this theory of "minimum deterrence." The theory itself may be briefly stated. If the enemy strikes first with his rapidly growing power, he will destroy most of the SAC. But he cannot count on destroying all of SAC. The SAC remnant will be too small to touch the still-intact structure of the enemy's striking power, but this remnant can still be directed at what are euphemistically called "political and demographic targets." If the enemy knows the SAC remnant

will be used in this manner, he will not dare to strike first. Thus, minimum deterrence will be achieved at minimum cost.

There are two fatal defects in this grisly theory. In the first place, it glosses over what may be called the problem of Marshal Biriusov, the artillery officer who heads the Soviet Air Defense Command. For 13 years, this separate Soviet command has absorbed between 18 and 20 percent of the gigantic Soviet defense budget. What, then, can Marshal Biriusov reply if he is told, "Our first strike will kill all but a remnant of SAC, and your only task is to repel the wretched remnant."

He must surely reply that the assignment will be easy. The SAC commander himself, Gen. T. S. Power, has rightly pointed out that the effectiveness of our deterrence depends upon what the enemy thinks about it, and not on what we think about it.

Yet the theory's second defect is even more fatal. To see what this defect is, you must imagine the position of the President of the United States after the enemy's imagined first strike. The President's own structure of retaliatory striking power will lie in ruins. The remnant that remains will not be enough to cripple the enemy's structure of striking power, which will still be untouched and ready to strike again. But his remnant will still be able (if Marshal Biriusov is wrong) to kill several millions of the Russian people.

Will the President then use his remnant, as the much touted minimum deterrence theory would require him to do? Or rather, how could he use his remnant in this manner, unless he was both irrational and inhuman?

There would be no means to halt the enemy's second and third strikes. Most of our people, remember, would still be alive and healthy and in no danger after an enemy first strike solely aimed at military targets. The price to be paid for a few million Russian deaths would therefore be many more millions of American deaths. Would any but a madman order such an exchange, with no true military purpose?

The answer is obvious. The theory of minimum deterrence is not common, everyday twaddle. It is poisonous, desperately dangerous twaddle. It is time to stop twaddling, and to start talking in hard terms about the hard requirements of true national security.

Resolution on Lithuanian Independence by Pittston, Pa., Lodge of Lithuanian Alliance of America

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 3, 1959

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following resolution on the independence of Lithuania:

LITHUANIAN INDEPENDENCE, FEBRUARY 16, 1959

Whereas February 16, 1959, citizens of Lithuanian ancestry, during their program in observance of the 41st anniversary of the declaration of independence of Lithuania adopted the following resolution:

"Whereas the people of Lithuania have time and again fought aggression to defend her freedom, have shed their blood to prove to the world that Lithuania is worthy of independence; and

"Whereas Lithuania during her two decades of independence demonstrated her ability to advance and prosper in all fields of endeavor, social, cultural, economic, and political; and

"Whereas Soviet Russia has enslaved Lithuania subjecting her people to brutal terror and oppression; and

"Whereas the indomitable spirit of the people and their great love of freedom still live despite terrible oppression, and the forced exile of hundreds of thousands of peoples; Therefore be it

"Resolved, That Americans of Lithuanian descent appeal to the conscience of the free world begging for their help in the name of justice and freedom; be it further

"Resolved, That this resolution, sponsored by the Lithuanian Alliance of America, lodge 7, Pittston, Pa., be forwarded to the President of the United States, the Secretary of State, Congressmen and Senators of the United States from Pennsylvania."

Mrs. JOHN T. BAYORAS.
Secretary.

The Roots for Growth

EXTENSION OF REMARKS
OF
HON. THOMAS B. CURTIS
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 3, 1959

Mr. CURTIS of Missouri. Mr. Speaker, under leave to extend my remarks in the CONGRESSIONAL RECORD, I wish to call to the attention of my colleagues the editorial which appeared in the Washington Evening Star of Monday, March 2, 1959:

THE ROOTS FOR GROWTH

Chairman Saulnier, of the President's Council of Economic Advisers, has coupled optimism about the Nation's economic future with some sound reminders of what is needed to make the bright prospects a reality. Speaking at the National Press Club, Dr. Saulnier not only saw good times this year and next, but a period of "very, very great economic growth" in the decades immediately ahead. He emphasized, however, that this growth is not going to come automatically, and assuredly not if the proinflationary thesis is accepted in governmental policy making.

It is a basic requirement of growth that there must be a steady expansion and improvement in the Nation's productive facilities. In a private enterprise system, at least, this requirement can be met only through a continuing heavy investment of capital. Capital itself is not something that can be legislated into existence or that may be found under a rock. It has to be created by encouraging the pyramiding of savings by individuals and corporations, safe from the fear that a dollar put into reserves today will be worth substantially less tomorrow.

"If we are going to increase our growth rate from the historic 3 percent to the magic 5 percent there must be very big capital growth, and you get it out of savings," Dr. Saulnier said. "If you create conditions which are not conducive to savings, you won't get the capital accumulation."

Certainly acceptance of the doctrine that creeping inflation is unavoidable, or even somehow healthy, is a condition not conducive to savings. It is, instead a condition that encourages the exact opposite—making debts and deficits attractive today in the belief that they may be offset in cheaper dollars tomorrow. Treasury Secretary Anderson recently summed up the grim implications of this philosophy when he told a congressional committee that "if we ever reach the point where people believe that * * * to save is to gamble then we are indeed in trouble."

Unfortunately, this point of danger may not be far away.

A Thought-Provoking Letter From a Constituent

EXTENSION OF REMARKS
OF
HON. CHARLES M. TEAGUE
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 3, 1959

Mr. TEAGUE of California. Mr. Speaker, sometimes we get the impression that demands for a balanced budget and economy in Government come only from people in the upper income tax brackets. I am inserting in the RECORD today one of the finest letters I have ever received. It is from a wage earner in my district. I commend it to my colleagues as an example of good, sound American thinking:

SANTA BARBARA, CALIF., *February 19, 1959.*
Hon. CHARLES M. TEAGUE,
House of Representatives,
Washington, D.C.

DEAR MR. TEAGUE: Mrs. Danenhower and I read your Washington Report with considerable interest and appreciate it very much.

There are several issues currently which we feel and believe strongly about. We fear we are in a minority in our thinking, nevertheless, we are remiss if we continue to think and talk about the issues, but do nothing else. Thus, this expression to our Representative in the Federal Government.

We despise the continuing effects of inflation, and right or wrong, we believe Federal Government deficit spending is the major culprit as a cause. We work hard, my wife at home, and I at work, to keep our little world centering around 4 young children afloat without indebtedness, and there is actually money only for the basic essentials. We actually live very simply and in some respects frugally, and we are distressed at the never-ending prospect of having to continue to do the same. The news carries stories of fabulous spending proposals, increased taxes, etc. When are we to have some of our own money to spend for something we want beyond necessary housing and food? (We drive a 12-year-old car, do not have TV, a freezer, clothes washer and dryer, hi-fi, etc., etc.). My income as a wage earner is well above the national average, I have an excellent job, yet we do not have money above the costs of very simple living.

We are also distressed at the disproportionate part of the proposed budget allocated to the Farm Program and to Veterans. Eleven percent of 77 billion is planned for these two programs. That seems preposterous. It is not only out of proportion in terms of the budget, it is way out of proportion in terms of the percentage of population served. I say this, being a veteran of 4 years service in the Army in World War II. I also make these statements having a brother who is a farmer (chickens and cattle, and my father, while living, a cattle rancher, and a colleague whose father is a dairyman.) All three have stated independently that they are hurt, and have been for years, by the Farm Program. Then, indeed, the existence of, and the problem of surpluses is something just unacceptable by any kind of rationalization.

Probably more distressing than any of these specific issues is the fact that there is

no evidence apparent to the people anymore, of Government by the people, for the people, and of the people based on the principles upon which this declaration was made. This declaration didn't state by, of, or for part of the people, nor did it say that part which has a vested interest here or there and lobbies most ardently, nor did it say that part which could contribute amply to a political party campaign chest, or respond to politician's techniques for running popularity contests at election time.

When only 10 percent of the population are farmers, and of that group, only 13 percent of those farmers who grow wheat, approved the initial farm support program, for which we all are paying year after year, how can that be justified by any reasonable explanation as of, by, and for the people? For which people? I resent paying for it. The same is true of the Veterans program. I served my country so that it could continue to serve me by guaranteeing freedom and liberty in a certain pattern of life. That has been accomplished. My country does not have an obligation thereby to support me for the remainder of my life! I'm every bit as capable of that, as before I went into the service. Ah, for a Congress that legislates from basic principles rather than ulterior motive.

I feel just as strongly about legislation to control abuses in the labor union movement (I am a member of and officer in a local union). This legislation is necessary for the well being of 177 million people. How many people are honestly represented by those lobbying for or against. It was disgraceful that the last Congress failed to pass such legislation. Only a few basic changes will do the trick: secret ballot in union elections, publication of financial status, strong control of and time limitations (6 months) on union trusteeships, and outlaw with no exceptions the secondary boycott. Pass Federal laws that will be possible to prosecute without exception. Use the F.B.I. Don't leave the problem to local district attorneys. They now fail to bring racketeers to trial and exclusion from society. I can't understand why we are so fearful of Communists and their dangers to us, yet we permit mobsters and gangsters to function in places of power over great parts of the population, to our serious detriment, and find we have a Congress sensitive about passing effective legislation, presumably for fear of not being reelected. It makes one wonder who is electing our Congress?

These are some of our thoughts about which we ask your considertion, and the exercise of your influence in accomplishing sound legislation based on principles of integrity and equity.

Very sincerely yours,

HAROLD S. DANENHOWER.

Hon. Harry McGregor

SPEECH
OF
HON. FRANCES P. BOLTON
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Monday, March 2, 1959

Mrs. BOLTON. Mr. Speaker, when one has served 18 years here in this great legislative body, the bonds welded are strong and they go deep. Between HARRY MCGREGOR and myself there was an even closer tie than most because we shared a special election on February 27, 1940.

A pleasant companion and a good friend—a hard-working Congressman and a loyal citizen—such was HARRY MCGREGOR. One could disagree with him as, I confess, I often did, but disagreement interfered not at all with our friendship. As Ohio whip he served the Republican Party and the Ohio Republican delegation well.

Tireless in his efforts to serve his constituents he gave himself with enthusiasm to work in their behalf, keeping in close touch with their hopes, their fears, their concrete desires, and their needs. The 17th District will miss his heartful service, Ohio will miss his constant watchful work in her interests and the United States a faithful worker in these Halls.

To his fine children and grandchildren I do extend my warmest sympathy and the hope that they know with deep certainty that—

They have not died
They live and breathe with you
They walk now, here at your side
They tell you things are true.
They live, they know, they see
They shout with every breath
All is Eternal Life.
There is no death.

"Up Came Hill"

EXTENSION OF REMARKS
OF
HON. LEO W. O'BRIEN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 3, 1959

Mr. O'BRIEN of New York. Mr. Speaker, too often the stress and strain of current events distort and exaggerate the geographical differences among our people of the North, South, East, and West.

In the broader area of national understanding, however, there are frequent and encouraging signs that ancient prejudices and hatreds are being buried beneath a recognition of the fact that a man's worth should not be measured by the geographical accident of place of birth or by the manner in which he approaches the pronunciation of certain syllables.

Recently, Congress in joint session heard a moving tribute to Abraham Lincoln. Countless people from the North think with affection of the gentle Robert E. Lee.

Any man who contributes to true historical perspective, recognizing ability and merit without respect to the Mason-Dixon line, deserves commendation.

That is why, today, I call attention to a great new book, "Up Came Hill," which brings to life a Confederate general, A. P. Hill, whose deeds too long have been hidden from the true light of history.

This book was written by a distinguished resident of my home city, Judge Martin Schenck. I know something of the monumental labor which went into this lively and readable book.

Most significant to me, however, is the fact that a busy northern gentleman should give so much of himself to provide full measure of historical right to a man who fought in the Confederate Army.

It is one more indication that we are, despite surface signs, a united nation.

Need for Curbing the Supreme Court

EXTENSION OF REMARKS
OF
HON. FRANK W. BOYKIN
OF ALABAMA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 3, 1959

Mr. BOYKIN. Mr. Speaker, a recent commentary by Mr. J. Wayne Poucher, radio minister for Life Line Foundation, Inc., a religious and patriotic educational movement, summed up forthrightly the case in favor of curbing the unconstitutional power the Supreme Court has assumed for itself.

Mr. Poucher's address, broadcast over a large number of radio stations throughout the country, deserves wide circulation. Under leave to extend my remarks, I wish to place its text in the RECORD.

Last December the American Farm Bureau Federation, meeting in convention in Boston, joined the list of organizations that have called on Congress to place limitations on the power of the Supreme Court of the United States. In a resolution adopted without opposition, the convention said it was "seriously concerned over the present tendency of the Supreme Court to legislate with the acquiescence of the executive branch."

The resolution, adopted by the Farm Bureau Federation, stated:

"The framers of our Constitution never intended that there should be vested in the Supreme Court of the United States power to legislate, power to distort the plain language of the Constitution, or power to interfere with matters of purely State and local concern where the constitutional privileges and immunities of citizens are in no way abridged."

The Farm Bureau Federation recommended, as other respected organizations have recommended, that Congress lay down proper limitations upon the appellate jurisdiction of the Court and that Congress use its powers to enact corrective legislation in those fields where the Supreme Court has invaded the legislative area.

Now, why is it that urgent calls for curbing the Supreme Court are coming from such groups as the Farm Bureau Federation and the Conference of State Chief Justices and the American Bar Association's Special Committee on Communist Tactics, Strategy, and Objectives?

The answer is not hard to find.

The answer lies in such Supreme Court decisions as those—

That threw out the convictions of 14 California Communists;

That ruled against firing a Federal Government employee suspected of being a security risk;

That decreed the FBI files must be opened to criminals or Communists when the contents of those files were being used to prosecute the criminals or Communists;

That held past membership in the Communist Party is not a bar to the practice of law;

That destroyed the right of States to try Communists under sedition laws;

That held the State Department cannot deny American passports to persons with known records in support of the international Communist conspiracy.

No, it is not surprising that so many sound organizations and so many patriotic Americans are demanding that a halt be called to the way the Supreme Court is encroaching on the powers of the legislative and executive branches of the Government.

In ancient days it was held that the king could do no wrong. But this is the year 1959, and the Supreme Court is not—and was never designed by our Constitution to be—a holy, final, supreme authority.

The word "supreme" in the phrase "Supreme Court" means only that the Court is the highest tribunal in the Federal court system. It does not mean, and was never intended to mean, that members of the Court are supreme over the Congress, the President, the States, and the people.

The United States Constitution established the Supreme Court as a judicial body to say what the law is. But the Supreme Court as now constituted makes law—yes, and unmakes law.

Since 1932 the Supreme Court has departed on no less than 35 occasions from decisions previously rendered. In all our national history before 1932, there had been only 29 such reversals.

All over the United States, lawyers and judges are forced to fumble around to try to determine just what the law may happen to be at the moment. That has happened because the Supreme Court has abandoned, in so many decisions, the Constitution and the written law.

The Court not only has caused chaos in the matter of interpretation of the law. It also has created serious gaps in our internal security system. It has gravely hampered the continuing effort to protect our American freedom from the insidious and never-ceasing attacks of the mistaken who hate freedom.

These are serious indictments, but they are justified by the facts. They are indictments drawn by men who know the law and also by other men who, without legal training, nevertheless understand our Constitution and know that document established a Federal Government composed of three separate and distinct branches—the legislative, the judicial, and the executive.

When the Supreme Court steps over the line drawn for it by the Constitution, the people have both the right and the duty to protest. The people are protesting, and they should be heard.

Indeed, they must be heard—for the sake of America and for the sake of freedom.

Walter, Hoover Lauded

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 3, 1959

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following column by Mr. E. F. Hutton which appeared in the Palm Beach Post of February 25, 1959:

TWO MEN
(By E. F. Hutton)

The country owes much to two men, Congressman FRANCIS WALTER, of Pennsylvania, the courageous chairman of the House Un-American Activities Committee, and Mr. J. Edgar Hoover, the unflinching head of the F.B.I.

These two men have been subjected to more sinister and malignant abuse than any other public officials of our time. Most of this is cooked in a Moscow pot and served by both those who know, and do not know, the cook.

The sad part is that so many well-meaning but simple minded innocents scatter as Christian food what is actually Communist poison. Many such innocents are church and college officials.

Every time a new Congress convenes, a determined effort is made to abolish the Un-American Activities Committee. This year the chosen spokesman was Congressman JAMES ROOSEVELT, of California.

As Congressman WALTER said of him, "He is the only person I know who has no criticism of the committee but wants to abolish it."

Mr. ROOSEVELT'S mother is a longtime enemy of the committee, and added her name to a newspaper advertisement in a Washington paper demanding its abolition.

Mr. J. Edgar Hoover expressed his approval of the committee. It was not abolished.

This was only part of the Communist campaign to conquer our country from within. That business, labor and Hollywood celebrities fawned on the smiling murderer, Mikoyan, shows the importance of the House committee and the F.B.I.

Address by the Honorable Clifford Davis Before the Fire Department Instructors Conference, in Memphis, Tenn.

EXTENSION OF REMARKS
OF
HON. J. CARLTON LOSER
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 3, 1959

Mr. LOSER. Mr. Speaker, under leave to extend my remarks in the RECORD, I want to include an excellent address by our colleague, the Honorable CLIFFORD DAVIS, before the Fire Department Instructors Conference, in Memphis, Tenn., on Tuesday, February 24, 1959.

CLIFFORD DAVIS is a brilliant speaker and I am sure the people attending the conference appreciated him taking the time out of his busy schedule to speak to them. The address should be read by every person interested in fire prevention and fire fighting. It follows:

Mr. Chairman, ladies and gentlemen, I acknowledge with genuine gratitude the honor which you have accorded me today. This is the second time that I have had the pleasure of speaking on an occasion of this character. Six years ago we met on the 25th anniversary of the establishment of the Fire Department Instructors Conference, and now I am grateful for the opportunity to discuss with you briefly the past 25 years in Memphis.

On this occasion it is natural for me to give you the unusual history of these many annual meetings in our city of Memphis. Soon after I assumed the office of fire and police commissioner I was able to name the late Irby Klinck, chief. He was one of the most beloved and finished firemen I have known anything about. A man of courage, ability and high character, he became my genuine, devoted friend and a loyal worker in the truest description of the term.

I shall never forget the chief coming to me one morning 25 years ago and stating that we had an opportunity to entertain this conference. In those days we were making every effort to make more efficient a fire department which had already shown fine progress.

Chief Klinck was a natural-born firefighter. For the first time in the history of our department he recognized as chief the value of training, fire prevention, and the development of more scientific methods in combating fire.

Recognizing the possibilities of such a meeting, I went to work enthusiastically as fire commissioner to support him.

In that first Memphis meeting only 106 men registered from 18 States, but it did not take me long to see the extreme value of the organization to the Memphis Fire Department and to the Nation. In those days our dear friend, Richard Vernor, who has since gone to his reward, was the dynamic originator and leader in this whole program. He was truly a dedicated man.

On the concluding day of the conference I took the platform and urged him to bring the conference back to Memphis the next year and was even so bold as to suggest that this should be the permanent meeting place of the meeting. He and his associates considered the invitation and returned. Originally we met in the fire headquarters, a rather antiquated building even in those days.

It was our idea that the department serve a daily complimentary luncheon. My warm friend, Mayor Overton, who is now deceased, fairly hit the ceiling when he signed the voucher covering a payment for onions, potatoes, and coffee, for the fire department. I know that you are still eating at noon and that the department is participating in those luncheons. Who pays for the 2,500 odd plates represented by the fantastic increase in attendance last year, I do not know, but if the city of Memphis is taking care of the entire cost, it is still ahead.

To me it is inspiring to know that John Klinck, now the chief officer of this department, is following in the footsteps of his splendid father in his recognition of the dividends which come from this conference, and is giving his best as co-chairman of this meeting.

I had the pleasure to give John Klinck his first employment. He came to the service upon completing his high school work. His father and I thought it would be temporary. Possessed of all the fine attributes of that father, he brought to this place of responsibility a scholastic education not possessed by his father. In addition he had the vision of youth and an amazing ability for organization.

I am delighted to know that my successors in the office of fire and police commissioner have supported the department and this conference, but I am simply delighted and thrilled with the accomplishments made under the direction of Commissioner Claude Armour.

To my mind, he is one of the best informed, most industrious fire commissioners in all of this country. His knowledge of firefighting organization, his vision for the future are outstanding.

On Sunday when I went through the Claude Armour Training and Communications Center, so appropriately named in recognition of his service to Memphis and the Mid-South, I could not help but think that this building and everything that goes within it shall ever stand as a lasting monument to his effectiveness and worth in this field.

I could not help but be just a little envious when I learned that already a million dollars had been expended in this center, and when completed its value should approximate $2½

million. When I left the city as fire and police commissioner, 19 years ago, our fire department budget for all purposes was only a million dollars.

But in these last 19 years this city has just about doubled in size, populationwise. In industry, manufacturing, finance, and in all other segments of the economy, it has grown even more amazingly. With the additional area more men, fire stations, and equipment have been required. It has taken very careful planning on the part of the commissioner to provide all of this, as he has done so well.

So it is quite natural today that I should tell you that the spirit of this department, its development, its growth, is acceptance of scientific and specialized techniques, must relate itself directly to the very spirit of this Fire Department Instructors Conference.

Memphis is proud of the finest firefighting equipment in the country, and the department is composed of intelligent, well-trained, and high-spirited men from top to bottom. Memphis has gone on to win fire awards too numerous to mention. Your conference has brought to Memphis, the South, and to the Nation, a clinic so valuable that no one will know the number of lives saved, the property conserved, and the scientific gains accomplished.

This conference is unique in that there is no promotion, no politics, and no organizational difficulties. The annual attendance has grown fantastically.

Represented by a group of serious-minded people in exchanging ideas and experiences to be mutually helpful, this organization has grown without promotion on its own through a real job of program development by the Western Actuarial Bureau, and superb planning by the Memphis Fire Department and the cooperation of intelligent, experienced, and wise officers and instructors from fire departments throughout the land.

Unselfish appearances of learned professors and scientific minds from the colleges and universities along with the appearance of governmental officials and representatives of industry and business have made this conference outstanding.

It was in this very city that the first demonstration of a civil defense municipal control center was demonstrated. It was here at this meeting that 50 industries sent their people in 1952, as did over 50 bases of the Armed Forces.

During World War II, the chiefs of 105 explosive ordnance plants were in attendance. While many of you return from year to year, there is still a turnover of 40 percent which denotes the permanency of the organization on the one hand and the opportunity to sow the seed of ambitious progress on the other.

Fire is as old as the world itself. We have but to go back to history to see the damage that it has wrought.

In Rome, about the year 46 B.C., Julius Caesar had nearly completed the construction of the Basilica Julia, a magnificent law courts building, when it was almost destroyed by fire. After the assassination of Caesar 2 years later, Augustus completed the structure as Caesar had intended. Even after all these years, the platform still remains a relic of architectural antiquity and of a serious fire of ancient history.

In the year 64 years after Christ, Rome was nearly destroyed by a fire that burned for several days.

Passing on to 1666 history records the great London fire which consumed the ancient Cathedral of St. Paul, 86 churches, the royal exchange, customs-house, hospitals, libraries, and prisons.

Previous to the year 1795, the town of Boston, then such a flourishing city of science, culture, and enterprise, was visited by a score of fires extensive in their destruction and frightful in desolation. The distressing calamities which had come to Boston from destructive fires induced the people to make the prevention of fire and the relief of sufferers one of their firts objects of charity and philanthropy. The National Fire Protection Association, so ably directed to Percy Bugbee, today has its headquarters in that city of Boston, which appreciated the importance of early fire improvements.

I could go on to mention the New York City fire of 1835 and many others. Perhaps the most spectacular fire in all history, which turned the thoughts of the Nation more vividly and intelligently to improving building ordinances and the beginning of firefighting techniques, was the great Chicago fire which began on Sunday evening, October 8, 1871, in the O'Leary stable.

Would that I had time to review again the dramatics and the serious consequences of this conflagration, but suffice to say that in its fury demon fire knows not wealth, nor creed, nor race, nor station in life. When the last glowing ember had been extinguished, in that Chicago fire, 17,000 homes were in ruins, 90,000 were homeless, 300 lives had been lost. Property, valued even in those days of values, reflected a loss of more than $200 million, and five square miles lay a smouldering waste.

But one may say, "Those fires occurred many years ago. Haven't our improved firefighting equipment, our more drastic fire laws, and better-trained firemen made such holocausts impossible?" The answer is "No."

Every year we have some 40 major fire catastrophies in which large areas of cities, towns, and forest lands are burned and hundreds of lives are lost.

We have but to remember the tragic Cocoanut Grove fire in Boston, in 1942, and the Rhythm Club in Natchez, Miss., a year before. Except for the number of fatalities, it was the same ghastly story as its successor in Boston—a crowd beyond capacity, insufficient eixts, flimsy drapes and decorations that burned like gunpowder, frantic guests fighting for their lives and falling unconscious.

Then there was the Winecoff Hotel fire in Atlanta. The terrible Bar Harbor, Maine, destruction, and we remember afresh, vividly and with sadness the unfortunate school fire in Chicago last year.

All of these fires which I have mentioned made headlines because they reeked with tragedy, drama, and sensationalism. Yet these great conflagrations are but a fraction of our fire losses. For every great fire that is broadly publicized, thousands of American homes are burned without mention in current news.

The flame of a gas stove, the burning match, the lighted cigarette, the electric iron, the toaster on the breakfast table all become symbols of disaster.

A fire breaks out in the United States every 20 seconds. A human life is sacrificed every 44 minutes.

It is a well-established and accepted fact that the power of ignition inherent in animal and vegetable substances is often the cause of spontaneous combustion. Cotton, shavings and sawdust, hemp, flax, oily and greasy rags or rubbish, charcoal, turpentine, paint materials, tarred rope, felt and sulphur are susceptible to low degrees of heat and are often the cause of fire.

There is nothing more frightful than the onrush of a blaze. The hurtling speed, the roaring motors of pumpers, of ladders, and hose trucks, the chorus of bellowing sirens, the grim faces of firemen precariously hanging on the hand rails, the opening furrow in traffic ahead as the right-of-way is given to fire fighters, the first glimpse of the lurid blaze and billowing smoke, the throbbing of the pumping engines, the clatter and thud of rising ladders, the orderly tangle of hose lines, hoarse shouts of command, the impassioned calls, "Water! Water!" the hissing streams from nozzles gleaming in the glare of searchlights, the hideous crackling and grumbling of flames, the heroism of unselfish men, the back-breaking drudgery, the discipline and orderly procedure, the skill and the knowledge gained from experience and at fire school, the complexity of the fire equipment, the drama, the tragedy, the heartbreak, the terror of victims, and the horror on the faces of an assembled crowd found at every fire make for a common understanding of the role that the fireman plays in our everyday life.

As we have seen gains in our march to improved pumping machinery, safety devices, water systems, we must not lose sight of the value of education. We must recognize the importance of the school program with its fire drills. The lessons learned by the young ones will be taken home to parents.

Fire Prevention Week, so effective in so many places, must be strengthened and encouraged. We must never overlook an opportunity to encourage civic and luncheon clubs in the consideration of fire problems.

Newspapers have always been effective and willing to dramatize the spectacular. We must ever be alert to give them short, effective and readable stories on how to prevent the smallest fire.

The night watchman, who for centuries has smoked a pipe and pulled his clock, must be taught the simple rudiments and later advanced by degrees to a better understanding of his tremendous task.

The radio and television may be used to inform and enlighten the people. The chief officer of the fire department today may well use a television film of actual fires for post mortem material, study, and improvement.

We know today that effective apparatus must be used and speed attained in conveying it to the scene of action. It has long been axiomatic that you can never make up on the road for the time you lost in the firehouse.

A smart fire officer encourages the utmost assistance from representatives of light, gas, telephone, and water utilities. Often these men go unnoticed and unrecognized, but it is they who cut electric lines, remove the danger of high power systems, and add to the sum total of safety.

It is the endeavor of all firemen to find every arrangement that will insure the application of water or chemical on a fire in its early stage. The wooden shingle has gone but new problems in construction are with us. Old hazards may have passed away. Gas is no longer used for illumination, but electricity has changed the construction of mercantile establishments and air-conditioning systems close many buildings tightly, leaving no easy places for ventilation. Plastics and chemicals have come a long-way, as has television, the use of natural gas and now, atomic energy.

The Claude Armour Training and Communications Center, and all of our educational programs must advance to meet the requirements of specialization.

Uppermost in the minds of all the people at this moment is the conservation of our resources, the conservation of health, education, and opportunity. Water is short in many parts of the country. No longer can fire departments waste this valuable asset. Indeed, so-called wet water and chemicals and scientific use of this powerful weapon must be continually improved.

Communities that have put forth extraordinary effort in teaching fire prevention and the enforcement of fire laws have been rewarded by a substantial decrease in the number of fires, the number of lives saved, and the amount of property destroyed or damaged.

In this short period of a luncheon talk, I have tried to cover a lot of ground. But I am the first to admit that much more should have been said. If a description of the be-

ginning of this conference in Memphis, the long historical background of the fire department profession, the need for applied specialization, training, prevention, and the necessity for public cooperation, along with the plea for continued application to high principle, be of any value, my hope is that my presence with you today may have been of some little worth.

Low Bid Effects $6 Million Saving in TVA Contract

EXTENSION OF REMARKS
OF
HON. JOE L. EVINS
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 3, 1959

Mr. EVINS. Mr. Speaker, there has been considerable comment on this floor and in the RECORD about the award by the TVA of a contract for a turbogenerator to A. C. Parsons, Ltd., of England. I appreciate that these discussions by my colleagues have been motivated by the interests of their constituents and a high sense of patriotism. But some of the discussion has not taken full cognizance of all the factors and facts in regard to this award. In order to present all the facts I requested the Board of Directors of the TVA to supply me with a statement on this award and I am inserting this statement in the Appendix of the RECORD under unanimous consent.

Mr. Speaker, the statement speaks for itself. However, I might point out a few salient facts in brief summary.

First. The TVA is required by statute to purchase by competitive bidding whenever possible and practicable.

Second. The bid of A. C. Parson, Ltd., was the only bid that was responsive and legally acceptable.

Third. The Executive order of December 17, 1954, prescribing the operation of the Buy American Act provides that purchases shall be made from competing foreign sources if the domestic price exceeds the amount of a foreign bid by 6 percent, or, if the domestic bidder is in an area of substantial unemployment, by 12 percent. In its invitation for bids, the TVA announced that it would accept the lowest domestic bid if it did not exceed the lowest bid by 20 percent. This was in addition to the import duty differential.

Fourth. The bids of the domestic concerns were in fact 50 percent higher than that of A. C. Parsons.

Fifth. The Parsons bid was firm, whereas the domestic bids were subject to escalation clauses. Furthermore, the Parsons bid was the only one which met the invitational requirement for payment of damage in the event of delay in delivery.

Sixth. The contention that the differential in the bids was the result in differentials in wages here and abroad is not supported by facts. The TVA computes that the wage differential would account for no more than $1.5 million, which is less than the import duty.

Seventh. It has been implied that this purchase will be paid for by tax funds. Actually, the funds to pay for this equipment will come from the TVA's power revenues—contributed by TVA's customers.

Mr. Speaker, I yield to no one in my desire to protect and encourage our own American industry and I doubt that any single agency or institution has contributed as much to the development and growth of our American electrical industry as has the TVA. The statement of the TVA makes it clear that the TVA went far beyond all legal requirements to give our domestic manufacturers an advantage in the bidding. As pointed out by Chairman Vogel of the TVA Board over the years the TVA has purchased $348,918,170 worth of equipment from Pennsylvania; this amounts to almost one-sixth of all the money the TVA has spent since it was started. The TVA purchases from New York State have amounted to $189,965,956, or nearly one-tenth of all TVA purchases. Most of this has gone to the two manufacturers who now complain of the loss of the contract on which a $6 million savings was effected.

I commend the attention of my colleagues to the TVA statement so that there may be a full knowledge of all the facts and circumstances and with fairness to all concerned. The letter and statement follows:

TENNESSEE VALLEY AUTHORITY,
Knoxville, Tenn., February 26, 1959.
The Honorable JOE L. EVINS,
House Office Building,
Washington, D.C.

DEAR MR. EVINS: We are glad to respond to your request for detailed information on the award by TVA of a contract to C. A. Parsons & Co., Ltd., of England, for a 500,000-kilowatt turbogenerator to be installed at the Colbert steam plant near Tuscumbia, Ala.

We enclose a full statement of the facts concerning this award to the Parsons firm. Underlying the consideration of all factors involved in this award is the saving to TVA of more than $6 million. The effects upon national defense and domestic employment are detailed in the statement.

It may interest you, in addition, to know that TVA purchases, to date, from New York State amount to $189,965,956 and from Pennsylvania, $348,918,170. These are the States in which this country's principal turbogenerator manufacturing plants are located.

Sincerely,

HERBERT D. VOGEL,
Chairman of the Board.

STATEMENT BY TVA ON PURCHASE OF TURBOGENERATOR FROM C. A. PARSONS & CO., LTD., ENGLAND

On February 6, 1959, TVA purchased a 500,000-kilowatt turbogenerator, to be installed at the Colbert steam plant near Tuscumbia, Ala., from C. A. Parsons & Co., Ltd., of England. The delivered price will be $12,095,800.

The purchase, made under competitive bidding procedures required by the TVA Act, was based on the following considerations:

1. The evaluated Parsons bid was more than $6 million lower than the evaluated bids of the only other bidders—Westinghouse Electric Corp. and General Electric Co.—both American firms.

2. Full compliance with the provisions of the Buy American Act and established national policy on foreign purchases.

3. A determination that Parsons is qualified, technically competent and adequately equipped to build and deliver the turbogenerator on schedule.

4. Assurance that Parsons is able to provide promptly, any repair service and replacement parts which may be necessary during the life of the machine.

Prior to the final action by the TVA Board in purchasing the turbogenerator from C. A. Parsons, all the factors involved, including such considerations as national security, were subjected to a detailed and intensive study.

Some subsequent public comment indicates a lack of understanding or of facts on the matter. This statement has been prepared to provide those facts.

WHY DID TVA SEEK FOREIGN BIDS?

For some time TVA has been disturbed by the rising prices of turbogenerators. There are only three American firms which manufacture large turbogenerators. Since 1951 the prices charged by these manufacturers for such equipment have increased by more than 50 percent, while the average wholesale price of all commodities has increased only about 5 percent.

It was this history of price increases by the only U.S. suppliers which led TVA to invite bids from qualified foreign manufacturers as well as domestic ones.

WHO WAS INVITED TO BID?

TVA invited bids from the three U.S. manufacturers and the two leading British manufacturers of large steam power generating equipment. Bids were received from three companies: the Westinghouse Corp., the General Electric Co., and C. A. Parsons & Co., Ltd.

In its invitation to bidders TVA set forth certain factors that would be taken into account in comparing bids. These included differences in guaranteed efficiency of the machine, differences in escalation of prices, and willingness of the manufacturer to pay specified damages if the machines were not delivered on time.

COMPARISON OF THE BIDS

Before reflecting the evaluation factors just referred to, the base bids received were as follows:

Parsons (including duty)	$12,095,800
General Electric	17,563,000
Westinghouse	17,633,000

The Parsons price was firm, while the bids from General Electric and Westinghouse were subject to escalation clauses. After adjustments for efficiency and escalation, the evaluated bids compared as follows:

Parsons	$13,140,700
Westinghouse	19,453,725
General Electric	19,673,780

The evaluated General Electric and Westinghouse bid were thus nearly 50 percent higher than the Parsons bid.

Moreover, of the three bidders only Parsons indicated a willingness to accept a contract containing the provision specified in the invitation for payment of damages in the event of delay in delivery. General Electric and Westinghouse both took specific exception to the provision. This exception constituted a material deviation from the terms of the invitation which rendered their bids unresponsive and unacceptable even if one of them had been a low bidder.

This provision for liquidated damages is a very important one. A number of the large generating units which TVA has bought in recent years have been delivered late, and TVA has had to incur substantial additional costs as a result. Inclusion of a liquidated damages provision in the final contract gives TVA added assurance that Parsons will give its full attention to making delivery within the time necessary to meet TVA's requirements as specified in the invitation.

NATIONAL POLICY ON THE ACCEPTANCE OF FOREIGN BIDS BY FEDERAL AGENCIES

National policy governing purchases of foreign equipment has been established by the Congress in the Buy American Act and by the President, in Executive Order 10582 of December 17, 1954, prescribing the manner in which all Federal agencies shall apply the Buy American Act. The act provides generally for purchase of domestic articles, materials and supplies, unless their cost is determined to be unreasonable as compared to foreign goods. The Executive order provides that ordinarily the offered price of materials of domestic origin shall be deemed to be unreasonable and purchase shall be made from competing foreign source if the domestic price exceeds the amount of a foreign bid by more than 6 percent. If the low domestic bidder is in an area of substantial unemployment, a 12 percent differential is used in accordance with a recommendation of the Council of Foreign Economic Policy.

TVA'S INVITATION FAVORED DOMESTIC MANUFACTURERS

TVA stated in its invitation for bids on the 500,000-kilowatt turbogenerator that it would accept the lowest bid from a U.S. manufacturer if it did not exceed the lowest foreign bid by more than 20 percent. (Such an increase in the price advantage for domestic manufacturers is permitted under the Executive order if the Government agency involved determines that it has sufficient reason to increase the differential. If, under these conditions, purchase is made from a domestic manufacturer the agency is required to submit a special report on the matter to the President.)

This price advantage given to U.S. manufacturers was in addition to the import duty which would have to be paid by the foreign manufacturer.

The import duty which will be paid by Parsons amounts to about $1.5 million. The additional 20 percent advantage provided for domestic manufacturers, based on Parsons' evaluated bid, was over $2.6 million. Therefore, the total price advantage enjoyed by domestic bidders as a result of these two items alone amounted to over $4 million. Further, foreign bidders had other added costs for such items as transocean shipping and marine insurance.

DO LOW FOREIGN WAGES ACCOUNT FOR THE DIFFERENCE IN BIDS?

One explanation which has been offered for the inability of American manufacturers to meet the foreign price competition in this field, is the difference in wages paid in this country and abroad.

Wages paid to workers in the electrical industry in England are lower than those paid by domestic manufacturers. Westinghouse says that British labor receives only 37 percent of the hourly rate paid to the electrical workers here. General Electric has suggested that the ratio is 40 percent.

Westinghouse has told TVA that 1,080,000 man-hours of work in its shops would have been involved in building the turbogenerator. General Electric is quoted as saying that 600 man-years of work, which is closely comparable to the Westinghouse man-hour estimate, would have been required. The Bureau of Labor Statistics reports the average hourly wage rate in the electrical manufacturing industry for October 1958 was $2.28.

The foregoing figures suggest that differences in labor costs would be in the neighborhood of $1.5 million, and this does not allow for any greater manufacturing efficiency in the larger U.S. plants of General Electric and Westinghouse. This computed difference is less than half the price advantage provided for domestic manufacturers. In fact, it appears that the import duty is adequate to protect U.S. turbogenerator manufacturers against differences in labor costs.

THE COMPETENCE OF C. A. PARSONS & CO., LTD.

C. A. Parsons was a pioneer in steam turbines. Outside of the United States the Parsons Co. is the largest manufacturer of such equipment in the free world. Half of the turbogenerators it builds are exported. For example, it has built most of the steam power generating equipment that is operating in Canada. It has an English order for a 550,000-kilowatt unit. In fact, Parsons & Co. and General Electric are the only two companies in the world known to be building units as large as 500,000 kilowatts, General Electric now being engaged in building one such unit, which TVA ordered from it in the fall of 1957.

Before any supplier, whether domestic or foreign, is invited to submit bids on large power equipment, TVA first satisfies itself as to the company's ability to meet high standards of quality and efficiency. Further, TVA must be satisfied with the ability of the supplier to provide repairs and replacement parts with reasonable speed. In the case of the Parsons Co., as with other approved bidders, TVA appraised these qualifications by an inspection of the company's facilities and detailed discussions with its responsible officials and engineers. TVA has determined to its full satisfaction that this British firm has the plant, equipment, skills, and manpower necessary to build and service an efficient and reliable machine. Further, Parsons maintains service facilities and personnel in Canada, which are as favorably located as the corresponding facilities of the U.S. firms.

NATIONAL SECURITY

All the foregoing has a bearing on the effect on national security of this purchase from a British firm. The Parsons Co. has a good record of delivery on schedule and its guarantee is backed up by a penalty clause in the contract. There are similar assurances that the machine will be highly efficient.

Fears that competition by foreign firms will result in all or most large turbogenerators being manufactured abroad, thereby eliminating American productive capacity as a supply source in defense emergencies, are unfounded. It appears that the total capacity in the entire free world for producing such equipment is so limited that all of it, both in Europe and the United States, will normally be required to supply the large turbogenerators necessary to meet the rapidly increasing demands of this Nation and others for electric energy.

In the event of total war, the problem of repair or replacement of generating units would be about the same, whether they had been manufactured domestically or abroad. Any realistic contemplation of such a war must assume that American turbogenerator manufacturing plants could be destroyed or damaged in the same attack which might damage or destroy the unit installed in the Colbert steamplant. Early repair or replacement would seem unlikely, no matter where the unit had been built.

In event of a less-extensive attack or acts of sabotage, it should be recognized that generating units manufactured by all the major American suppliers are incorporated in the TVA system. Widespread damage to the system could result in heavy demands on all these suppliers, both by TVA and by utilities in other sections of the country. Addition of the Parsons unit to the TVA system increases the number of suppliers who can be called on in the event of such an emergency and thereby reduces the risk of delay in getting maximum capacity back into service.

Economical operation of the TVA power system, to which the saving of more than $6 million contributes, is important in the national defense budget, since half of the power from the TVA system goes to Federal defense installations. Introduction of real price competition into the turbogenerator manufacturing field makes a contribution to combating inflation. At the same time, purchase of the unit from Parsons strengthens the economic position of our ally, Great Britain.

For national security, strong allies, a healthy world trade, essential industries strengthened by stimulation of competition, are likely to be at least as important as the location of specific powerplant repair facilities. These basic purposes are served by the award of the contract under discussion to Parsons of England.

IMPACT ON EMPLOYMENT AND NATIONAL ECONOMY

TVA would regret any real net loss of employment for American workers from its purchase of an English turbogenerator. However, it seems more likely that there will a net benefit to American labor. TVA will make payment in dollars for its purchase from Parsons. It can reasonably be assumed that these dollars will be used to finance British purchases of other goods either in the United States or in third countries which will in turn use the dollars to make purchases in the United States. Those dollars can be expected to create and pay for as many man-hours of work in the United States as would have resulted from domestic manufacture of the turbogenerator.

In addition, the saving of over $6 million affects TVA's ability to provide low-cost power to farms, homes, and industrial concerns within its power service area. The availability of ample power at the lowest cost stimulates industrial employment, and enables the home consumers of this power to continue to provide the best market in the Nation for electrical appliances. The money TVA invests in generating equipment is exceeded by the purchases by consumers of TVA power of electrical appliances and equipment—more than $2 billion worth since the end of World War II—of which General Electric and Westinghouse are leading suppliers.

THE TURBOGENERATOR WILL BE PAID FOR BY THE USERS OF TVA POWER

Contrary to the impression that prevails in some quarters, the money to be spent for the turbogenerator will not come from taxes. The cost will be met from power revenues paid by the users of TVA power.

The Late Honorable J. Harry McGregor

SPEECH

OF

HON. WILLIAM C. CRAMER

OF FLORIDA

IN THE HOUSE OF REPRESENTATIVES

Monday, March 2, 1959

Mr. CRAMER. Mr. Speaker, will the gentleman yield?

Mr. HESS. I yield to the gentleman from Florida.

Mr. CRAMER. Mr. Speaker, it is with a heavy heart that I join today in the eulogies for our late departed colleague, HARRY MCGREGOR, with whom I was privileged to serve as a member of the minority on the Public Works Committee, having been a member of that committee since I was elected to Congress some 5 years ago.

HARRY MCGREGOR was a great public servant; HARRY MCGREGOR was an outstanding American; HARRY MCGREGOR was the ranking minority member of the Roads Subcommittee of the Public

Works Committee, and through his sponsorship of legislation the great interstate and other Federal-aid highway systems came closer to fruition than at any time previously. It was through his efforts and sponsorship of legislation that the forerunners of the great 1956 Interstate and Defense Highway Act came into being. It was his bill, his sponsorship of legislation in the Republican 83d Congress that resulted in the passage of the forerunner of the great highway system act in the 84th and the 85th Congresses. This great Interstate and Defense Highway System is a monument and a tribute to HARRY MCGREGOR. He was more interested and qualified in this subject, I venture to say, than any other Member of the House has been in recent years.

It was indeed a pleasure to serve with him, and it was my great pleasure and privilege to come to know of his ability and dedication on the Public Works Committee. He succeeded as ranking Republican member the Honorable George Dondero who in his turn served with equal ability and distinction.

J. HARRY MCGREGOR was a man of deep conviction, he was a man of sound judgment. He was a man who did not hesitate to get up on the floor and present those principles in which he believed and to fight for them. He was a hard-working and aggressive man, and as a freshman and since I have deemed it a high privilege to serve with him. He gave the greatest leadership and encouragement to me as a member of the Public Works Committee. His understanding of the problems faced by new Members, and his helpfulness to them will linger long not only in my memory but also in the memory of many others in the Congress who came to know him and seek his wise counsel in recent years. It is a high honor for me to join in these eulogies of our departed colleague. He was a great man, an outstanding American J. HARRY MCGREGOR.

What the State of Virginia Plans To Do

EXTENSION OF REMARKS
OF
HON. WATKINS M. ABBITT
OF VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 3, 1959

Mr. ABBITT. Mr. Speaker, in preparation for the forthcoming observance of the Civil War centennial, we have now functioning in the State of Virginia an active program looking toward what we hope to be one of the most significant commemorations in our history. We have established what is known as the Virginia Civil War Commission, which is now planning Virginia's observance of the centennial, and extensive preparations are being made in various parts of our State in connection with this event. Virginia's points of interest are well known to people throughout the country, but we are hoping during this observance to enlarge upon what has already been done and to better publicize the fine historical points which have connection with the Civil War period.

Mr. James J. Geary, executive director of the Virginia Civil War Commission, has been most active in this connection, and recently he made a very splendid address before the Civil War Centennial Conference, held at Chapel Hill, N.C. His address was entitled "What the State of Virginia Plans To Do," and I wish to include herein the text of his address, as I feel that it will be of interest to those who are looking forward to this event:

WHAT THE STATE OF VIRGINIA PLANS TO DO

(Address by Mr. James J. Geary, executive director of the Virginia Civil War Commission, before the Civil War centennial conference, Chapel Hill, N.C., February 28, 1959.)

Dr. Crittenden, ladies and gentlemen, it is a sincere pleasure for me to be here with this group, interested in the Civil War centennial and meeting at this fine university, of Virginia's great neighboring State of North Carolina. I bring you greetings from the Virginia Civil War Commission.

One of the developments for which our Virginia commission is most eager is for North Carolina and all of our sister States of the South to join with us in actively planning for this momentous 4-year Civil War centennial. One member of our commisison has spent a lot of his own time writing to friends in Southern States attempting to stimulate the formation of State centennial commissions. We feel the time so needed for making plans is slipping away, and that we Southern States must not let someone else do all the running with the ball.

Recently at our request Virginia's Governor Almond wrote to the Governors of the other Southern States. He urged that they use their good offices in the interest of legislation creating centennial commissions within their States and appropriating the necessary funds for their use. The response was gratifying. ome said that commissions already had been appointed—though without funds to work with. Others said legislation was pending, either for the creation of commissions, for appropriations of funds, or for both. I believe Virginia is still the only Southern State with a legislatively created centennial commission and money to work with. We sincerely hope that there will soon be active commissions in all the Southern States. We need you, and we want your help.

I'm to talk on "What the State of Virginia Plans To Do." I've been in this job full time for almost 4 months. I've been thinking about it night and day. I seek all the advice I can get. Most people just shake their heads and say, "It is a big job." It's been like driving along on a foggy morning. Sometimes the fog clears a little and you catch a glimpse of something, and then its all cloudy again. And so you keep on driving, hoping that in time the fog will lift, and you will be able to see clearly the road ahead.

Suppose you suddenly found yourself with an office and a secretary and this assignment: plan and coordinate for 4 years the centennial of the American Civil War; plan and coordinate, over a 4-year period, the 100th anniversary of a national emotional convulsion so profound and so extensive that no one today really understands it.

Well, we're driving ahead through the fog in Virginia—feeling our way. And we've accomplished a few things. We've gotten some publicity; we believe we've started some people to thinking about the centennial; and we're laying the groundwork for an organization. I have traveled over much of the State, attending meetings, being introduced, letting people know that we are in business. And invariably I've told them that in the final analysis it is they—the people of the individual localities—who must be responsible for much of the observance of this centennial. We cannot do it in Richmond. We can only help. Last Monday, at a meeting of our executive committee, a delegation from a certain area of the State, interested in the centennial, showed up to ask what we are going to do. I think one of the members of our committee gave a very apt answer. He said: "We are going to try to stimulate you to do whatever you want to do." No State commission by itself can put on a 4-year centennial program. It couldn't do it if it had the money—and it won't have the money.

In Virginia we have welcomed with open arms all qualified groups who have come forward and volunteered to do a job. The Richmond Academy of Medicine, long interested in medical history, offered its services, and our commission designated it as the organization in Virginia to portray the medical aspects of the war. At Newport News there is a wonderful privately endowed institution dedicated to preserving the history of man's conquest of the sea. It is called the Mariners Museum, and it has come forward with plans for a centennial exhibit on the "Effect of Sea Power on the Outcome of the War." We have designated this institution as the organization in Virginia to portray the war at sea.

A local committee at Manassas has great plans for a reenactment of the First Battle of Manassas in July of 1961. And while we certainly do not see the centennial as one reenactment after another, we have caught some of the enthusiasm of this group and the commission has given its hearty endorsement to their plans. So we will go all out for First Manassas, the first great battle of the war, in the hopes that it will focus attention on the whole centennial.

We've had some conversations about a possible reenactment of the *Merrimac-Monitor* encounter. There are some who feel it would be preferable to have an indoor exhibit of this great sea battle, with models, so that hundreds of thousands or millions of persons could see it over 4 years instead of simply a few thousand on 2 or 3 or 4 days.

But what are some of the things that can be done in those communities well removed from any major engagements? Recently a wonderful, simple suggestion came from a Richmond man who probably knows more about the Richmond battlefields than any man alive, Mr. J. Ambler Johnston, a distinguished architect. Why not, he said, have rededications of the monuments that stand in virtually every county courthouse square in memory of the men who served from that county. Have a speech by the son or the grandson of the man who made the original dedicatory speech when the monument was erected 50 or 75 years ago. Have a local group get together the names of all who served from that county, along with the names of the regiments or corps. Get people thinking and organizing on the grass roots level, and half the battle is won.

Now, of course, many things can be done on the State level—depending on how much money you have. You can have State exhibits, educational programs, radio, television and outdoor drama, publications, documentary films, contests, scholarships, fellowships. You can mark the sites of engagements, rename highways, purchase property, acquire valuable documents and artifacts. And you can encourage scholarly research.

In Virginia we are already at work on a commemorative one-volume selection of the wartime papers and letters of Gen. Robert E. Lee. Strangely enough, General Lee's papers have never been gathered in a single publication, though many of them are scattered through various published books.

This is an expensive project. Even though a publishing house has agreed to underwrite the manufacturing and promotion of the book, the editorial costs to the State will probably be in the neighborhood of $25,000.

I am glad that we are doing this, for it will be a permanent contribution to scholarship and the history of the Civil War. And the sterling character of Robert E. Lee can be an inspiration to all young people. We hope this book will be sufficiently readable that it will command a relatively good sale.

For my part, however, I would not like to see our program, or yours, topheavy with projects of a scholarly nature, which must appeal to a very limited audience—and to an audience which already is interested in the Civil War. No one do we need so much as the historian, and the history-minded student. With their help, let us make the centennial program one that will appeal to the other 99 percent of the people. Let us stimulate—however briefly—in the man or woman, the boy or girl, who does not normally think much about these things, an understanding and a reverence for the American spirit and heroism that was shown on both sides in that epic struggle—that American tragedy—of 100 years ago.

Some Facts About the Budget

EXTENSION OF REMARKS
OF
HON. JOE L. EVINS
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 3, 1959

Mr. EVINS. Mr. Speaker, in my newsletter last week I called the attention of the people of the great Fourth District of Tennessee, which I have the honor to represent, to some facts about the President's budget which have not received as much discussion and consideration as, in my view, they deserve.

Under unanimous consent, I am inserting this newsletter in the Appendix of the RECORD. The newsletter follows:

SOME FACTS ABOUT THE BUDGET

The Appropriations Committee of the House is continuing its hearings, studies, and consideration of all aspects of the President's budget proposals.

Everybody wants economy in Government and everyone wants a balanced budget for the Nation. These are the objectives to be desired. However, in the widespread discussions and debates about the limit and extent of the budget, there are certain facts that have not received much discussion.

For example, we hear much talk about "the wild spending in the Congress." What many sometimes do not realize is that much of this so-called wild spending comes about by the recommendations of the President, his Director of the Bureau of the Budget, and the members of the executive departments. In this connection, it should be pointed out that since 1952 the Federal budget has increased from $60 billion to $80 billion. This year the President is proposing an overall budget of $77 billion. Every year since 1952, the President has presented to the Congress larger budgets, calling for increased Federal expenditures. Every year—with the exception of last year when we were threatened with an economic depression—the Congress has reduced the budget by several billions of dollars and in 1957 by some $5 billion.

Members of the Appropriations Committee, during the current hearings, have been somewhat startled—and certainly it has been revealing—to note that every head of each executive agency, without exception, is asking for increased personnel, increased appropriations and a larger budget for their own departments. This includes the Budget Bureau itself, which is asking for an increase of 5 percent in new appropriations; and the White House where the budget has been increased by 33 percent in the past 2 years, and even the Secretary of the Treasury.

After making this closer look at the President's budget, it is apparent that the President is not recommending that spending be reduced in certain areas but rather increased. The proposed economies in the budget are almost entirely in the field of investments in new assets for the Nation, such as public works projects, the development of our own resources and loans that are repayable. In other words, the President's budget calls for cuts in capital assets and investments in the Nation and for increased expenditures in other departments. This means more spending and less investment.

Some news reports have indicated and great claims are made that the proposed budget is a balanced budget. There are several contingencies which are not realized and in all probability will not be realized. Therefore, the budget is not in reality balanced. These contingencies include again raising the postal rates to the people of the Nation—to which the Congress is not likely to give its approval—(2) increasing again gasoline taxes—(3) not considering supplemental appropriations requests, of which there are annually several in number, and (4) the sale of national mortgages and securities held by the Treasury, which would bring in some income to the Government if sold at reduced rates and with profit to private investors. In considering these contingencies and on second examination, the proposed budget is not in fact balanced because these contingencies are not likely to materialize.

The Congress will address itself to the merits of the various proposals and no doubt will approve some of the recommendations, alter and amend others and substitute, in several instances, the collective judgment of the elected Representatives of the people in substitution for departmental recommendations. Keeping in mind previous action of the Congress, it is very likely that the final budget, after all these adjustments, will come closer in reality to being balanced than the budget presented to the Congress and now under consideration.

Bank Mergers

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, March 2, 1959

Mr. MULTER. Mr. Speaker, I commend to the attention of our colleagues the following letter written by Donald Havens, Jr., of New York City, to the editor of the Wall Street Journal. The letter appeared in the Wall Street Journal of February 19, 1959. I believe it reflects the feeling of most depositors.

BANK MERGERS

EDITOR, THE WALL STREET JOURNAL:

The current rash of bank mergers in New York strikes this observer as unnecessary and wasteful. I do not mean to make a wholesale condemnation of all the recent mergers. However, it seems that many of the combinations contemplated have been arranged solely on the grounds that increased size gives increased prestige with "national" customers. The banks have argued that they need greater capital in order to serve their customers better. Actually, there are only a few billion-dollar corporations in the whole country that are able to borrow the legal limit of any of the existing billion-dollar banks in New York. Therefore, it would seem that the main reason for these mergers is simply jockeying for prestige based on size, and a result is that service may suffer, particularly the service every bank owes to the community in which it is located.

In many cases the mergers have resulted in unwieldly operations at first and an overlap of departments and branches. The expense of consolidating can be excessive. The cumbersome operations hurt customer relations and some valuable accounts are lost in the fast shuffle. Lastly, uncertainty of position also generally causes at these times some losses of key personnel whom the banks have spent both time and money to train.

DONALD HAVENS, JR.

NEW YORK CITY.

He Speaks for Democracy

EXTENSION OF REMARKS
OF
HON. PETER FRELINGHUYSEN, JR.
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 3, 1959

Mr. FRELINGHUYSEN. Mr. Speaker, several days ago I had the pleasure of attending an impressive lunch in the presidential room of the Hotel Statler. This meeting honored the 50 winners—from the 49 States and the District of Columbia—in the Voice of Democracy contest. From this fine group of young men and women, four finalists were picked. Among these four finalists was an articulate and personable young man, Derek L. Booth, from Boonton, N.J., in my congressional district.

In a short speech, which I am including below, Derek expressed his views on democracy:

I SPEAK FOR DEMOCRACY

(By Derek L. Booth)

It is interesting to note in our modern society the many and varied interpretations people put on the word "democracy." One may call to mind several ideas simultaneously, and this is natural, for democracy is a broad and occasionally deep subject. It involves the myriad facets of the republican form of government as practiced in our country. It includes relationships between ourselves and others, no matter what the circumstances. It also encompasses material wealth and advancement, and all which these terms connote. Therefore, democracy as Americans know it is a way of life, inextricably bound into our every activity. But let us make clear at the outset that true American democracy is also an ideal, as yet unattained by any people. It is a thing of the spirit; which spirit must be felt by the people before it is of any value. And if it is sensed by the citizens of the country, they cannot help but strive for the fulfillment of the standard—constantly—fervently.

What does this ideal mean? What is the principal application of this cherished heritage? I believe that to live democratically is to practice an art, to learn a lesson. Someone has said that we use people and love things, in contrast to our intended behavior.

It is my feeling that democracy is the art—the lesson—of loving people and using things, to the best interests of all. That is my definition.

This statement must be translated and applied to the phases of our living, in order that we may see more clearly our proper course of action. In the international scene, the word for democracy is "peace." Its realization calls for distribution of power so that no people shall have control over another without the other's consent. It is common thought that the United Nations has accomplished this task since its inception. I am convinced, however, that the U.N. has not yet achieved this ideal state of harmonious cooperation. Its charter speaks of "living together in peace as good neighbors"; and its Universal Declaration of Human Rights deals with the concepts of human worth, equality, opportunity, liberty, and so on; but does not every one of the five great powers still insist on the right of veto in the Security Council? Agitation continues, and will continue, for the abolition of veto and the submitting of decisions to the whole body. This is merely one manifestation of the ongoing movement for perfection of democracy.

Domestically, democracy's synonym consists in proportionate sharing. This is to say that all who work partake to the fullest extent of the material advantages which they help to create. Our economy would be a mutual enterprise, with even the humblest laborer assured of earning enough to maintain dignity and family. Here is the place of arbitration, industrial unionism, and other devices now being used to impart a full measure of justice to the apportionment of authority in our mammoth trade organizations.

So we have come to realize that democracy means these four things: First, the recognition of the dignity and worth of the human personality; second, the right of the individual to achieve up to his capacities; third, the right of the individual to share in the determination of his own welfare; and fourth, the development of liberty, not license, and of cooperative citizenship. Only as we set ourselves to pursuing these goals, and to performing their corresponding duties cheerfully, will our struggle culminate in the perfection of truth, revealed in dynamic democracy.

Statement of Ed E. Reid in Support of Area Redevelopment Bill—S. 722

EXTENSION OF REMARKS

OF

HON. ALBERT RAINS

OF ALABAMA

IN THE HOUSE OF REPRESENTATIVES

Monday, March 2, 1959

Mr. RAINS. Mr. Speaker, last week Mr. Ed E. Reid, executive director of the Alabama League of Municipalities, appeared before the Production and Stabilization Subcommittee of the Senate Banking and Currency Committee in support of the area redevelopment bill.

As director of the Alabama organization, Mr. Reid spoke in behalf of 255 member municipalities in Alabama. His statement also represented the American Municipal Association's position in regard to this legislation and this national group includes some 13,000 cities and towns in its membership.

I submit Mr. Reid's statement in support of the area redevelopment bill for the benefit of my colleagues.

The statement follows:

TESTIMONY OF ED E. REID, EXECUTIVE DIRECTOR, ALABAMA LEAGUE OF MUNICIPALITIES, BEFORE THE PRODUCTION AND STABILIZATION SUBCOMMITTEE OF THE SENATE BANKING AND CURRENCY COMMITTEE, FEBRUARY 26, 1959

Mr. Chairman and members of the subcommittee, I am Ed E. Reid, executive director of the Alabama League of Municipalities. I am testifying before you today in that capacity and also on behalf of the American Municipal Association on whose executive committee I serve.

The Alabama League of Municipalities is a voluntary association of the city and town governments of our State. It was organized in 1935 and has been representing our State's cities and towns before the State legislature and here in Washington ever since. The league is also a service, information, and research organization and has as its sole objective the betterment of municipal government in Alabama. I have had the honor of serving the organization as its executive director from its inception—since 1935.

The league has 255 member municipalities ranging from the smallest, Detroit (population 75), to the largest, Birmingham (population 326,000).

The American Municipal Association, through memberships of its affiliate leagues, represents something like 13,000 towns and cities in the United States and Puerto Rico. In other words, the American Municipal Association is the national federation of the 45 State municipal leagues—of which Alabama is one.

At its last annual American Municipal Congress the membership of AMA approved the following policy resolution pertaining to area redevelopment legislation:

"DEPRESSED URBAN AREAS

"Congress should assist those communities which suffer persistent unemployment due to underdevelopment or decline to achieve economic health. Such communities should include the city even if the labor market area in which it is located is not depressed. The older core city has special problems with its obsolescent industrial facilities.

"To be successful, however, Federal aid must cope with basic problems and not confine itself to a stepped-up letting of defense contracts in the depressed community. AMA recognizes that such Federal aid without initiative and active participation by the municipality will not bring about the desired revitalization."

Specifically, AMA recommends:

1. Supplementary unemployment benefits, especially for workers taking vocational training courses.

2. Loans for construction or rehabilitation of industrial plants.

3. Assistance for public works plans.

4. Special tax amortization benefits for new defense facilities.

5. Placing Government contracts as far as practicable in surplus labor areas.

The area redevelopment bill (S. 3683) as vetoed by the President would have achieved most of those objectives. We urge the Congress to again pass the important legislation and we again ask the President to accept appropriate authority under which the communities with basic problems of persistent unemployment can be assisted toward their solution.

The Alabama League of Municipalities, through action of its committee on Federal legislation which was confirmed by delegates to its annual convention, approved the principle of last year's proposed legislation on this subject. That policy remains in effect today.

Mr. Chairman, preparatory to writing this statement I referred to the record of the hearings conducted by this committee and its counterpart in the House of Representatives during the past 4 years on area redevelopment legislation. I also very carefully read the statement you made at the time you introduced S. 722 in the Senate this year. My conclusion was that there was very little I could add to the record in support of this important legislation beyond reiterating the wholehearted endorsement of the measure on the part of the Alabama League of Municipalities and the American Municipal Association, plus a few general observations and some brief comments on the depressed area situation as it relates to communities in Alabama.

There are several reasons why we welcome and support area redevelopment legislation at the Federal level. For one thing, the kind of resources needed to do an adequate job are well beyond the capacity of the State and local governments to support alone, and this is particularly true in the case of our smaller cities. For another, State governments have generally been disinterested and unwilling to undertake any remedial action. Finally, we welcome Federal involvment because we feel it is proper and legitimate and long overdue.

For example, unemployment has been recognized as a matter of Federal concern for some time now, but measures to counter it have been limited very largely to participation in the payment of unemployment compensation, statistics gathering, and the placement of defense contracts. Never before to our knowledge has the kind of research been undertaken to discover the specific causes of unemployment that can be attributed solely to local factors as we believe will be required for the successful operation of the program proposed in S. 722.

Furthermore, the role of the town or city in the national economy also should be of considerably greater concern to the Federal Government than it has been heretofore. S. 722 establishes the framework for doing some long overdue research work on what makes local economies tick, and what their relationship is to the economy of the whole region, the economy of the State, and to that of the Nation itself.

One of the most encouraging things about the area redevelopment proposal is that it will necessarily get the Federal Government involved in an analysis of the basic building block of the national economy—the economic base of the local community.

We have reviewed the proposed bill—S. 722—in some detail and we are convinced that it offers a sound and comprehensive approach to the solution of what we know to be an exceedingly complex and vexing problem.

We believe that the kind of program proposed by S. 722 offers distressed areas a range of aids which, if coupled with energetic local leadership and a realistic appreciation of the total problem, should prove effective in stimulating the kind of action necessary to put the community on the road to economic recovery.

We believe that Federal action is long overdue and that area assistance legislation as covered by S. 722 ought to be approved by the Congress.

We further believe that once we have had an opportunity to study the program in action we will be in a much better position to assess its strong points and its weaknesses, and then to make whatever perfecting amendments which appear necessary to make it an even more effective effort on the part of public and private agencies.

In our own State, the State government has done practically nothing to help repair the injury done to our economy brought on by underemployment or unemployment, and the counties and municipalities simply do not have the resources to tackle such a problem alone. The areas listed as depressed areas in Alabama as in other States, I am sure, cover more than the few cities listed by the Department of Labor as having a surplus of labor. Many of the cities listed are

the economic centers of much wider areas and their failure to provide employment and job opportunities for their city people affects the whole area for miles around in all directions. So, seven or eight communities listed as depressed areas may actually be wide geographic areas reaching out in all directions for many, many miles.

I cannot, gentlemen, emphasize too strongly the importance of this legislation. We hope it wins your approval and that of the entire Congress. Moreover, we hope this year that if your bill is passed by the Congress the President will have the good judgment this time to sign it into law.

Letter Re Price Support Payments

EXTENSION OF REMARKS
OF
HON. AL ULLMAN
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 3, 1959

Mr. ULLMAN. Mr. Speaker, I have long been convinced that the Department of Agriculture has on a number of occasions rendered the farmers of this Nation a great disservice by providing misleading information which has tended to turn the consumer against the farmer. A recent case in point was the issuance of a list of the recipients of the 1957 price support payments.

Apparently what the Secretary of Agriculture has done is to list all Commodity Credit Corporation loans as if they represented total cost to the taxpayer. This is simply not the case, for in many instances these loans were repaid prior to the Government takeover date and thus did not represent an actual Government expenditure.

I want to bring to the attention of my colleagues a particular case in which I believe this misinformation has resulted in a grave injustice. A constituent of mine in the Second District of Oregon, Mrs. Amanda Duvall, was reported as receiving $104,944 on her 1957 wheat and barley crop. What was not included in the report was the fact that Mrs. Duvall redeemed 26,195 bushels of wheat under loan prior to the Government takeover date at a cost to her of $47,736.96. This sum was paid to the Commodity Credit Corporation as payment of principal and interest plus loan charges by Mrs. Duvall who then marketed the 26,195 bushels of wheat through a local cooperative.

I think this is a matter which deserves to be clarified and in order to provide full information, I ask that the following letter by the manager of the Morrow County Grain Growers be inserted in the CONGRESSIONAL RECORD:

MORROW COUNTY GRAIN GROWERS, INC.,
Lexington, Oreg., February 26, 1959.

Hon. AL ULLMAN,
Member of Congress,
Washington, D.C.

DEAR MR. ULLMAN: I feel the recent Associated Press report, quoting Senator JOHN J. WILLIAMS, reference 1957 price support payments to Mrs. Amanda Duvall of Heppner does an injustice by way of not giving the full story.

Actually Mrs. Duvall took CCC loans amounting to $104,944 on her 1957 crop wheat and barley. What isn't reported is that Mrs. Duvall redeemed 26,195 bushels of her wheat under loan prior to the Government takeover date at a cost to her of $47,736.96. This sum was paid CCC as payment of principal and interest plus loan charges by Mrs. Duvall who then marketed the 26,195 bushels through this cooperative.

The above-mentioned payment of almost $50,000 reduces the total cash benefits by this figure. In addition the CCC took full title to the balance of her 1957 crop wheat amounting to 10,912 bushels stored in our elevators plus her full harvested crop of barley. The wheat she redeemed and sold was in her own farm storage and carried a later loan date, hence lower interest charges.

The market value of the commodities taken over by the Government amounted to very nearly the loan price plus interest and charges. Reducing the total cash received by the amount paid back by Mrs. Duvall, plus the value of the grain surrendered certainly pares the net benefits received to a very low figure.

Very truly yours,

AL LAMB,
Manager, Morrow County Grain Growers, Inc.

What People Should Know About Cancer and the Place of Krebiozen in the Picture

EXTENSION OF REMARKS
OF
HON. ROLAND V. LIBONATI
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 3, 1959

Mr. LIBONATI. Mr. Speaker, I attended a testimonial dinner in honor of Dr. Andrew Conway Ivy, the champion of the scientific doctrine of freedom of research, which has suffered in recent years through the falsity of certain politico-physician leaders of the American Medical Association, who faked reports, suppressed honest information, brutally slugged the opposition, both physically and through pressures, used to prevent the truth about Krebiozen reaching the American people.

His speech, made to 1,200 persons attending, in his honor, among whom were numbered many outstanding business, civic, scientific, religious, and industrial leaders, was a masterpiece in its treatment of fundamental truths touching upon the subject of cancer and, in its simplicity of language, was readily understood by the layman mind.

The subject matter of the speech follows:

WHAT PEOPLE SHOULD KNOW ABOUT CANCER AND THE PLACE OF KREBIOZEN IN THE PICTURE

(By Dr. A. C. Ivy)

In speaking on this subject I do not desire to create an abnormal fear of cancer or an irrational concern about cancer. I desire, however, to create an informed and rational concern about cancer.

I

Why should everyone have a rational concern about cancer? The answer is: Because approximately one out of six persons today die of cancer. And, if something is not done to prevent or cure cancer in its early stage one out of four persons now living will die of cancer.

Some people say: "I do not want to know anything about cancer. But, I want my doctor to know everything about it."

But the sad and tragic fact is that people who know nothing about cancer go to see their doctor too late for the doctor to help. Because of their ignorance they do not give the doctor a fair chance to help them, and they have done themselves and loved ones an injury. This is especially true of internal cancer, or when the cancer starts deep in the body where it can only be seen by X-ray examination. When a cancer is deep in the body where there are not many pain nerves, the cancer spreads beyond the reach of the surgeon and radiologist.

There are signs and symptoms which indicate that cancer is starting or is present. You should know and remember these signs and symptoms.

II

First, let me tell you about a precancerous sore or abnormality, an abnormality or a sore which is known to indicate that a cancer might occur or that a cancer is already present in its early stages. A precancerous or an early cancer can be cured by either surgery or cautery and some can be cured by X-ray or radium.

To emphasize this I shall cite my own case as exhibit A. From 1919 to 1946, I smoked a pipe. Tobacco smoke contains a cancer-producing tar. It also contains arsenic in a cancer-producing form, because sprays containing arsenic are used to kill tobacco-plant worms and other parasites. I quit smoking in 1946 because I found that tobacco smoke and nicotine are harmful to the body of suspectible persons, and about 20 percent of people are susceptible. I quit for two reasons: First, because I did not desire to harm my own body; and, second, I did not desire to be a bad example to young people, inducing those who were susceptible to smoke and to harm their body.

Even though I quit smoking in 1946, the prior effect of the smoking on my lips and tongue persisted. And, one Monday morning in September 1958, I woke up and felt a painful spot on the edge of my tongue. I thought I had bitten my tongue and proceeded to forget about it. But the sore spot was still present the following Friday morning; so, I looked at it in the mirror. I saw that the sore spot was a "white spot," which in Greek and medical terminology is called a leukoplakia, because "leuko" means white and "plakia" an elevated spot or plate.

A leukoplakia is a precancerous type of abnormality or sore. I did not know, of course, whether cancer cells had already developed in the white spot. If they were present or should develop, I knew that they would invade or grow into the surrounding normal tissues, including the blood vessels and lymphatic vessels. This extension of the cancer cells into local tissues is called invasion. I knew, furthermore, that if cancer cells were present and had invaded into the lymphatic vessels, the cancer cells could then spread into the local lymph glands in my mouth, throat, and neck. I knew that if they had grown into the local blood vessels, they could spread to my lungs and grow there.

So, what did I do? I put into practice what I had been teaching and preaching for 25 years. That is, you should not delay taking care of a precancerous or an early cancerous abnormality or sore. I called my physician and made an appointment to have the condition cared for the following Monday.

What was done regarding treatment? First, I took injections of Krebiozen, because Krebiozen (hypothetically) builds up the natural defenses of the body against cancer, and because if there were some cancer cells in the local blood or lymphatic vessels and if they were dislodged by the operation I was to have, the cancer cells would not grow

in the lymph glands or lungs. If the body resistance against cancer was high, then cancer cells when they arrived at the local lymph glands or lungs would not grow; they would die. After taking Krebiozen, my physician cut out the white spot so that it could be examined under a microscope for cancer cells. He then cauterized the tissue around the incision to destroy any cells that might remain behind. I then continued to take Krebiozen for 1 week to keep my body defenses high.

Instead of using Krebiozen to build up body defenses against cancer cells which may get into the blood during an operation, many surgeons inject nitrogen mustard into the blood of the patient. Nitrogen mustard is a poison—a war gas—which kills cancer cells; but at the same time it kills normal cells and makes the patient sick.

I am not condemning the use of nitrogen mustard, because it is of value. I am just telling you the facts.

A physician wrote me and asked the following question: "Dr. Ivy, if you really believe that Krebiozen is a cure for cancer why did you have surgery used in the treatment of your cancer?" I replied: "Your question is like asking me if I had stopped beating Mrs. Ivy. I have never started beating Mrs. Ivy, and I have never claimed that Krebiozen is a cure for cancer." I have only claimed that it is of value in the treatment of some cancer patients; and, if further developed, it may turn out to be more effective and provide a key to finding the cure of all cancers.

III

What are the precancerous or early cancer signs and symptoms everyone should know?

1. Skin, a chronic sore any place; a wart or a mole which becomes irritated; or a lump in the breast or elsewhere under the skin.

2. Bleeding from a body orifice: (a) the nose, when it is not an ordinary nose bleed; (b) coughing up or spitting or vomiting blood; (c) blood in the urine or the stool; (d) blood from the vagina when not due to the menses.

3. Pain: persistent, recurring. The patient usually sees the physican for severe pain, but does not when the pain is not severe.

4. Headache, persistent, with or without vomiting.

5. Hoarseness, persistent.

6. Chronic cough.

7. Indigestion: stomach distress, burning, much belching; and a change in bowel habit.

IV

There are two general types of cancer. One type develops in cells covering the inside and outside the body, or the epithelial cells. This type of cancer usually occurs between the age of 40 and 65; such cancers are called carcinoma. The other type develops from the cells which are located between the internal and external covering cells of the body. This type occurs at any age and is called sarcoma.

V

Cause of cancer? There are two interrelated causes. One is heredity and the other is irritation.

Physiologically cancer may be described as representing an abnormal repair of injury to cells.

First, there is a hereditary susceptibility or low resistance to cancer which is generally confined to one or more organs, such as the stomach or lungs. This susceptibility to cancer has been established in animals. It has not been proved categorically to exist in man; but most students of cancer believe that it exists in man.

Second, irritation of a group of cells as occurs in a chronic sore which does not heal may be responsible, or a specific cancer-causing substance (carcinogen) such as the tar in soot or in tobacco smoke, or in certain dyes used for coloring things people use.

VI

There are two types or theories of treatment. One uses artificial means and the other uses natural means.

The artificial means consist of surgery, cautery, X-rays, radium, and the cobalt bomb, and the use of chemicals which are poisonous to cancer cells. If the cancer is in an early stage and is localized to one place, then surgery and cautery is the only absolute or categorical way to cure the cancer. But unless the operation is done gently and skillfully, the cancer may be spread throughout the body. In the case of certain cancers which are sensitive to X-rays, X-rays or radiant energy will destroy the cancer. There is no artificial chemical now known which will kill all cancer cells and not normal cells. There are some five or six artificial chemicals which are of value in the treatment of cancer. But all of these depress the reticuloendothelial cells which are the cells which naturally give the body resistance to disease and parasites and are concerned with the normal repair of the body. There are some patients, however, who respond dramatically to some of these artificial chemicals, and they should be tried in certain patients.

The natural means consist of the use of chemical substances produced by the body. Those chemical substances in the body which regulate growth and repair.

The natural means of controlling or curing cancer has not been studied extensively, not nearly as much as it merits. In fact, the only real reason or basis for the hope that we may be able to discover a chemical substance which will prevent and destroy cancer, is the observation that in 1 out of 100,000 cancer patients the body cures itself of cancer. In other words, there is a natural way for the cure of cancer, and we should intensively search for the chemical substance or substances which the body uses to occasionally cure itself of cancer.

The use of male hormone for cancer of the breast and of female hormone for cancer of the prostate are examples of the use of natural chemical substances in the body. The same is true of cortisone and perhaps metacortin.

But, these hormones are not sufficiently concerned with the regulation of growth and the repair of injury of cells. To obtain the primitive chemicals associated with repair of injury and the regulation of growth, we must study the fluids in inflammation and the secretions of the reticuloendothelial cells; that is, we must study the fluids and the cells which are naturally primarily concerned with the regulation of growth and repair of injury.

This is where Krebiozen enters the picture. Hypothetically it represents a secretion of the reticuloendothelial cells which are concerned in the regulation of growth. As pointed out previously, it is very probably present in inflammatory fluids.

This is not a wild idea. For example, Dr. Paul-Ehrlich worked on it for a short time. It remained relatively dormant until Krebiozen was publicized, primarily by its enemies. From a scientific point of view, I and others consider the theory to be established. For example, in the June 1958, report of the Sloan-Kettering Cancer Institute of New York City you will find the following quotation: "There is reason now to believe that natural defenses against cancer exist. It has proved possible, by manipulating and enhancing these defenses, to cure laboratory animals with some types of transplanted cancer." In this connection, I have pointed out to the American Cancer Society, that one of the substances used by the Sloan-Kettering group to manipulate and enhance natural defenses against cancer was an extract of a yeast—a mold-like organism distantly related to actinomyces bovis which was used by Dr. Durovic to produce Krebiozen. I further pointed out that if they would inject their substance, Zymosan, into horses making them them slightly ill, and then properly extract the blood of the horses, they would obtain Krebiozen.

VII

How is Krebiozen made? The scientific steps for the production of Krebiozen were published in October 1951, again in 1952, and still again in 1953, 1956, and 1959. The manufacturing details have not been published. But, a patent was applied for in October 1951. When the patent is granted the details will, of course, be published. For those who are not familiar with the policies of industrial organizations, manufacturing details are not disclosed. That is where the principle of competition which lowers the price to the consumer comes into operation in a free enterprise system.

I have informed Dr. Durovic, the Duga Laboratories since 1949, that I must have the basic scientific steps but not the manufacturing details. And, since private money rather than public money was used to produce Krebiozen, they should not disclose the manufacturing details. This is a basic American principle, a difference between our way of life and the communistic or national socialistic way of life. And, I believe in this principle just as firmly as any other basic American principle.

Without knowledge of the manufacturing details and about 2 years ago, I made some Krebiozen from 46 horses. A research foundation defrayed the expenses. The Krebiozen I made was active.

In newspapers you have read that Krebiozen is a secret remedy. That statement is as false as the suspicion and medical politics which first fathered it. I say this because I believe without being egotistical I can qualify as an expert on the subject of medical ethics, since it is known that I represented World Medicine at the Nurenberg trials on the subject of medical ethics and medical science. The canon against promoting a secret remedy is to prevent fraudulent avarice. There is no fraud because the Duga Laboratory has never made a claim for Krebiozen. I have claimed on the basis of evidence submitted that it merits a serious study and has merit in the treatment of some cancer patients. It is distributed without claims to physicians for use under the regulations of the Federal Food and Drug Administration. It is not secret in the sense that it cannot be made on the basis of information disclosed. I have made it. So far as avarice is concerned no one has made any money out of Krebiozen. Everyone associated with it has spent much of their own money on it. I have testified under oath that neither I nor my relatives shall ever make or accept any money for work on and activities related to Krebiozen, except expenses when and if money becomes available. Yet, the papers have repeated, and repeated the false charge that Krebiozen is a secret remedy, until some of my friends have started to believe it. But, do not misinterpret me; I am not complaining.

VIII

All sorts of false charges against me and Krebiozen have been made.

One of the most recent is that Krebiozen is nothing more than mineral oil. Here is a story regarding that point. A patient living near Los Angeles developed cancer of the body of the uterus. It was removed; but the cancer recurred lower down in the cervix. It was bleeding a lot. The patient refused X-ray and radium and surgery. She requested Krebiozen, but it was denied. Since she was the wife of a veteran her case was reviewed by a tumor board and surgery was urged. The patient refused. Finally, her physician obtained some Krebiozen and gave it to her. The bleeding stopped and 4 months later there was only a scar where the

cancer had been. The patient's doctor met a doctor friend of mine and said to him: "What am I to do? Advanced cancer was diagnosed by three biopsies and a tumor board. It was undoubtedly a cancer. Now after giving Krebiozen, it is gone, and only a scar is left. What am I to do since the California Medical Society has said that Krebiozen is only mineral oil?" My doctor friend replied: "It may be that the medical society analyzed the wrong grade of mineral oil."

We have chemists, too, and they have reported and we have very briefly published their findings.

I have requested that the charge that Krebiozen is only mineral oil be brought before a grand jury. It will probably not be brought before a grand jury, because I have the facts and can prove my case.

It has been rumored around among physicians in the U.S.A. and abroad that I am off my rocker and have had a minor stroke. When Mrs. Ivy heard this rumor she stated: "If Dr. Ivy is off his rocker, he has been off of it ever since I have known him." During the first day I testified at the hearings of the commission of the State legislature on Krebiozen, the opposition had a psychiatrist present to observe me. At the end of the day he reported that "if Dr. Ivy is senile, it would be good if everyone else were senile." During the period I was supposed to be off my rocker I published 65 articles in scientific medical journals including the Journal of the AMA, and was instrumental in raising $45 million worth of buildings for the West Side Medical Center. So I agree with Mrs. Ivy. If I am off my rocker, I have always been off of it.

It has been said even by some of my fair-weather friends that Ivy has been duped. Of course, I feel positive that the opponents of Krebiozen and their followers have been duped by premeditated dishonest tactics. In fact, I have proved this by categorical evidence given under oath. And my evidence and charges have never been denied under oath, although the opposition was urged to take the stand and do so.

If I have been duped, then I have been duped only by the unyielding honesty of the natural law of the cancerous process. If all the improvements I have seen have not been due to Krebiozen but to natural causes, then I have been duped and the profession has been duped because there is no published evidence showing improvement with the frequency I have seen it. That is one reason why a "fair test" is necessary. I am from Missouri and have to be shown by strictly honest evidence that what I have been seeing is not due to Krebiozen.

What have we seen after the use of Krebiozen?

IX

Results following the use of Krebiozen.

The results can only be briefly summarized. It should be pointed out that percentage-wise the results have remained approximately the same after the first 2 years of our study, which started in August 1949. It must be recalled that 99 percent of our patients had advanced cancer and in most cases had received all that the physician had to offer.

1. Approximately 1,000 patients have been treated sufficiently to include in a general summary.

2. Approximately 68 percent of patients reported relief of pain to a variable extent and for a variable period. It was abolished or markedly relieved in approximately 30 percent. The average time the relief appeared after the start of therapy was 7 days, the range being from 1 to 30 days. The use of narcotics for pain was abolished in about 25 percent.

In a control study on pain, 72 percent of those who knew they were receiving Krebiozen had less pain and 68 percent of those who did not know that they were receiving Krebiozen had less pain.

With the relief in pain there was generally an improvement in appetite. An increase in weight occurred in approximately 56 percent.

3. The size of the tumor was measurably decreased for a variable period in approximately 50 percent of cases.

4. Ambulatory life has been prolonged in approximately 25 percent of patients who were bedridden or only up some of the time.

5. There are alive today 51 patients out of approximately 500 who from 4 to 8 years ago had advanced cancer and are apparently free of cancer today. Percentage of approximately 10 percent has persisted for the last 4 years. Some patients who had lived with inactive cancer for 2 to 8 years have died from causes other than cancer.

6. In four patients whose abdomen was opened and then closed immediately because the cancer was so advanced that it could not be operated, the abdomen has been opened later and no cancer has been found.

7. Most of our long-term patients still receive Krebiozen. In three patients the tumor has disappeared on giving Krebiozen and returned on withdrawing it and disappeared on starting Krebiozen again. This cycle was repeated four times in one patient, three times in a second, and two times in a third. We now have five patients free of active cancer who have not taken Krebiozen for from 2 to 4 years.

You may be surprised to learn that not only some 200 physicians have confirmed our observations, i.e., those of Phillips, Pick, and Ivy but there are 2 physicians both of whom in the past have treated many cancer patients who have obtained approximately the same results we have. One has treated over 80 patients with advanced cancer and 12 of these are free from active cancer for from 1 to 4 years. The other physician treated 40 patients and except for the percentage of relief of pain obtained about the same results we did. This latter physician has desired to publish his results, but pressure to date has prevented him from doing so.

The only evidence submitted against Krebiozen is the 100-case report of the council on pharmacy of the AMA. This report was proven under oath to contain 23 falsified cases and most of the other cases were so close to death that they lived only long enough to receive an average of 3 doses of Krebiozen. This situation has never been denied under oath because the evidence showing dishonesty and superficiality cannot be denied.

X

What are the next steps required? Two things must be done. One is to obtain a fair test and the other is to make a new batch of Krebiozen.

XI

The fair test.

We have repeatedly proposed a fair test since 1952. The Commission on Krebiozen of the Illinois Legislature tried to persuade the AMA to conduct such a test.

Our proposal and that of the commission was that an arbitration type of committee conduct a double-blind test under conditions where bias or prejudice could not even be suspected of operating so as to subvert the objectivity of the test.

The American Cancer Society invited the Krebiozen Foundation to submit a proposal for a fair test. The foundation did. The proposal was rejected because they did not like the arbitration type of committee, the double-blind type of test and they wanted to look over our files to see if a test were warranted. In other words, they first asked for an opportunity to discredit Krebiozen without performing a test, and then wanted a type of test which could obviously be suspected of being conducted by a loaded committee.

Senator PAUL DOUGLAS in August 1958, proposed on the floor of the Senate a fair test for Krebiozen. We accepted his proposal immediately because it contained the basic principles of a fair test, one in which bias and prejudice could not be suspected of operating.

The National Cancer Institute of the U.S. Public Health Service made an alternative proposal and their alternative proposal has been discussed since October 5, 1958. It has turned out that their proposal is considerably better than that of the American Cancer Society. But, in its present form it is not acceptable to us because the proposed committee is not of the arbitration type, and hence not above suspicion, and because the committee is given the right to discredit Krebiozen without doing the test.

So, we have requested the National Cancer Institute to discuss Senator DOUGLAS' proposal with us. Sufficient time has not elapsed to hear from the Institute.

Since suspicion exists on both sides, the only type of committee that can be above suspicion is an arbitration type. Since suspicion exists, the only experimental design which is above suspicion is one where the physicians giving the treatment will not know whether mineral oil, or mineral oil with Krebiozen in it is being given, and only one person will know which set of ampules contains Krebiozen. Third, I must be a party to giving the treatment, as a consultant, and must have the responsibility of deciding on the basis of the clinical results of the test which ampules contain Krebiozen. Otherwise, the project would not be a test; it would be just another experiment undertaken by novices in giving the Krebiozen treatment.

If the fair test is conducted, and the results turn out favorable to Krebiozen, the controversy regarding the activity of Krebiozen is ended, and an important scientific fact will have been established. If the results are negative, Krebiozen will be buried scientifically and ethically, and nothing will be lost because valuable information about the natural history of cancer will have been obtained.

If we cannot get a fair test under the auspices of the National Cancer Institute under existing legislation, then new legislation will be sought.

XII

The need for another batch of Krebiozen.

A new batch of Krebiozen is needed for several reasons:

1. At the present rate of usage, all the Krebiozen now available will be used up next summer, and those patients now dependent on it will be left without it. Who then will be responsible for the consequences of taking away their Krebiozen?

Not me, because I am going to work and appeal to others to help make a new batch. So will Mr. Davis, Miss Ross and a lot of other people in addition to those present here tonight.

2. More chemical study of Krebiozen is sorely needed. This is expensive and more material is required.

3. It is very important to establish the fact that another large batch of Krebiozen can be made.

4. Since extract I, which is Krebiozen or a substance closely related to it chemically, clears the opacity of the lens in canine cataract, we now have a biological or animal assay method for new batches of Krebiozen. This has been a handicap in the past. In the past, the assay has had to be made on a human patient with an untreated breast cancer.

5. Furthermore, the development of this potentially very important medical treatment of early cataract in man is urgent.

In this connection it should be pointed out that from 70 to 90 percent of persons over 60 years of age have opacities in the lens

of their eyes, and that 25 percent of all blindness in the United States of America is due to cataract.

We now have no money and soon will have no Krebiozen to pursue this study on cataract, which represents the first step toward the solution of another one of the medical impossibilities.

In view of this discovery can the funds for the production of another batch of Krebiozen be found?

The answer should be "Yes; the funds will be found." This answer should be so forceful that it will rumble and reverberate so loudly and so long that no one will be able to rest in peace until the necessary funds are available.

A minimum of $350,000 is required.

A committee is being formed to make another batch of Krebiozen. It will be a tax-exempt type of organization. I know that everyone here is interested and I know some of you will be able to help. Those who are able to help should write to Mr. John M. Davis, president of the LaSalle Construction Co., Chicago.

Remarks of Mayor John J. Buckley, of Lawrence, Mass., on the Area Redevelopment Bill S. 722, Before the Production and Stabilization Subcommittee of the Senate Committee on Banking and Currency

---

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 3, 1959

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I am pleased to extend the remarks of Mayor John J. Buckley of my hometown of Lawrence, Mass., when he appeared on February 27 before the Senate committee considering S. 722, the area redevelopment bill:

REMARKS BY MAYOR JOHN J. BUCKLEY, OF LAWRENCE, MASS., ON THE AREA REDEVELOPMENT BILL S. 722, BEFORE THE PRODUCTION AND STABILIZATION SUBCOMMITTEE OF THE SENATE COMMITTEE ON BANKING AND CURRENCY, FEBRUARY 27, 1959

The exodus of the textile industry, which for about 100 years had dominated the economy of Lawrence and had provided employment for its citizens, set off a chain reaction of adverse factors from which the city of Lawrence has not fully recovered.

The loss, over a period of several years, of approximately 20,000 textile jobs and the abandonment of millions of square feet of textile manufacturing space had two general results upon the community life.

First, the individual person or family suffered a prolonged loss of income which ultimately caused considerable direct economic distress and this was undoubtedly accompanied by deleterious effects in the health, education, and general morale of the community's citizens.

Second, it resulted in considerable loss of income to the municipal government through decreased assessed valuations of vacant industrial buildings and the inability of the unemployed homeowner to pay his taxes when due.

Unemployment in Lawrence resulted in what, I imagine, must be a typical or classical chain reaction of adverse economic factors.

Lack of income to its industrial workers sharply reduced their purchasing power, and our retail business district which bears almost 40 percent of the city's assessed valuation began to feel the effect of reduced sales. The weaker sections of the business section were unable to ride out the sustained decline in sales, and vacancies in retail stores and in office buildings were soon forcing the owners thereof to forego the proper maintenance of their properties and to subsequently seek tax abatements and lowered assessments. This same condition resulted in further unemployment in the service personnel of our city. In many instances employers in both the manufacturing and retail industries were inclined to reduce the wages or working hours of remaining employees.

The municipal government, faced with reduced income and continuing increased costs of government, was forced to refuse increases in wages to its municipal employees despite the fact that other communities were granting such increases to meet the rising costs of living. The city was forced also to defer needed maintenance of its public buildings and replacement of worn-out equipment to avoid increasing the burden on its unemployed homeowners and generally to maintain only the bare essentials of municipal services.

Owners of the vacant industrial buildings immediately sought to dispose of them and sales were at far below the assessed valuation. Such sales formed a basis for reassessment and reduced valuations. During that period the city lost valuation, through reassessment of just five industrial properties, in the approximate amount of $3 million.

A comparison of Lawrence's assessed valuation with that of every industrial city in Massachusetts reveals that we've had the lowest increase in valuation in the past 15 years (see exhibit A). Such a condition, an increase of only 7 percent in valuation in the past 15 years, is a direct result of the exodus and liquidation of the textile industry.

The real casualties of Lawrence's recession were those workers who were 45 years of age or older and who had spent 20 or more years developing skills peculiar to the textile industry. They were unable to compete for jobs in other industries with the younger groups of unemployed who were naturally the choice of any new industry in fields other than textiles.

The laws of the Commonwealth did not permit financial assistance from the Commonwealth for the training or retraining of these older workers unless they were employed in the particular trade for which they sought training. Our efforts to exempt Lawrence from such provisions of law were unsuccessful. In fact our representatives have a bill before the State legislature again seeking exemption from that restrictive provision (see exhibit B).

Many of these older workers were required to seek public assistance to meet the ordinary everyday costs of living which placed an additional burden upon our city's finances.

Many of our unemployed sought employment in other cities, some quite removed from Lawrence. Some of our people eventually and reluctantly severed their long association with friends and relatives and moved away from the Greater Lawrence area.

Vacant industrial plants and loss of job opportunities therefore created an ever deepening and widening area of adversities in the form of decreased valuations (see exhibit C), increased taxes, loss of individual ownership of homes, loss of population. All of these have caused a general outback in municipal services and a gradual and general deterioration of the physical resources and assets of the community.

It is difficult to measure the social and psychological effects of such an unhappy situation but, undoubtedly, it is a contributing cause in the separation of families, in bringing about divorces, in promoting juvenile delinquency, and destroying the initiative and ambition of the individual citizens of the community.

It is quite apparent to me that local communities need outside assistance to soften the blow of loss of industries and heavy unemployment and to stem the tide of unhappy conditions that usually follow in their wake.

I am of the opinion that the area redevelopment bill provides considerable assistance in that direction and will enable a community such as Lawrence to overcome many of the difficulties involved in attempting further economic and industrial recovery.

I am particularly interested in and favorably inclined toward the provisions of the bill as contained in sections 14 and 15 which would permit a community to secure the benefits of the Federal urban renewal program for the purpose of redeveloping blighted commercial and industrial areas. I think that this would be particularly beneficial to our New England cities where old industrial buildings have become outmoded and have a limited attraction to industrialists. Many of these buildings become a drag on the industrial space market and are given little consideration by the newer, expanding industries. In some cases it has been our experience that industrial developers and investment institutions do not want to pour new capital into decaying properties or communities. Many former textile buildings in Lawrence have been rehabilitated and presently provide inexpensive manufacturing space for those industries which have replaced textiles. However, in some situations we have concluded that we are virtually powerless to reach a full solution for the redevelopment of some of these properties without some type of economic assistance. I am convinced that the opportunity to redevelop industrial space under the provisions of the urban renewal program would speed up the full economic recovery of any area.

The opportunity to develop blighted open areas for commercial and industrial uses would also be a great asset in effecting such a recovery. Our industrial development committee in Lawrence is of the opinion that it lost out on several excellent industrial prospects interested in new modern buildings, primarily because the forces of private enterprise have been unable to assemble large tracts of land due to various reasons such as diversity of land ownership, legal obstacles, etc. Proper engineering and development, therefore, has not taken place so that new building programs could go forward. By broadening this urban renewal provision of the act the city of Lawrence through its proper public agency could take the necessary steps to plan and develop these blighted open areas. I feel sure that the broadening of the urban redevelopment law to include commercial and industrial blight will be a progressive step toward developing new industrial and commercial building programs.

Federal assistance in vocational training as provided in sections 16 and 17 is sorely needed. This is particularly true for the older worker who is unemployed and who is presented with little or no opportunity for reemployment in the particular industry in which he has developed certain skills.

Secretary of Labor Mitchell has continually advocated the retraining of older industrial workers who have been displaced as in the case of the textile liquidation from Lawrence. The productivity of these workers is unquestionable. The city has continually tried to subsidize the retraining of these former textile workers through payment of tuition to other institutions outside of the community.

For instance, Lynn, Haverhill, or Lowell. This has been a drain on the returns from our local tax revenue, which has been decreasing over the past years because of depressed economic conditions. Vocational training should only be undertaken provided it is based on the factual needs of the industrial community. We can show specifically that the Lawrence community is in dire need of specific training programs for skilled technicians and mechanics.

We do not have the necssary institutional training programs now. We know that industrial firms, through on-the-job training programs, are supplementing to some extent, this need. A retraining program with Federal assistance, since the depressed community is usually hard pressed financially, would give the older worker, and particularly the one with ambition and initiative, an asset to offset the natural handicap of age. I am confident that industry as a whole, would look with favor upon older workers if they were armed with the needed skills.

Section 6 of the act is vitally important to cities such as Lawrence. I feel that this part of the program could stimulate modernization and new construction in our area. We in Lawrence have been fortunate in acquiring many diversified industries, but I feel sure over the past number of years, with additional help and liberal financing program as outlined in this bill, we could have secured additional industries which would subsequently provide more job opportunities besides a broader tax base.

Industrial development from a competitive standpoint, today necessitates that new manufacturing plant construction be provided with 100 percent financing. In a great number of cases, adequate local financing has been provided, for which we are thankful. However, due to various inequities throughout the Nation, a State such as Massachusetts cannot provide bonded indebtedness for loans for new construction, which some States can. Furthermore, many firms cannot contemplate new building construction because they are not prime risks and consequently they must retain adequate working capital. If these problems could be overcome, I feel sure some new industrial building could take place in Lawrence and other depressed areas.

I feel sure this program, if put into effect, would back up our already existing local and State financial organizations and would effect a greater opportunity for new jobs and subsequent new tax base.

Lawrence has borne the slings and arrows of outrageous economic fortune, but to the eternal credit of its people whose courage persisted during our darkest days, our city has regained a place in the industrial sun. The Lawrence story is the story of its fighting people. We have gained considerable publicity throughout the State and Nation on our fight for industrial recovery. Lest we be deluded by all the inspiring and stirring words describing Lawrence's recovery it is vitally important that we keep one sobering fact in mind. Lawrence is a labor surplus area and it has been in this category ever since the liquidation of the textile industry. We have remained a pocket of economic difficulty in periods of apparent national prosperity. This has been the most frustrating aspect of our efforts during the past few years.

I am convinced that the area redevelopment bill will provide a substantial assist to industrial cities like Lawrence and I respectfully urge this subcommittee to file a favorable report on S. 722.

I appreciate the opportunity of appearing before you so that I could present the needs of the city of Lawrence based on its experience as one of our older industrial cities.

EXHIBIT B

HOUSE NO. 1483

An act exempting the city of Lawrence from certain restrictions in the law relative to evening classes in industrial and occupational schools

Be it enacted by the senate and house of representatives, in general court assembled, and by the authority of the same as follows:

SECTION 1. The restriction in the definition of "Evening class" in section 1 of chapter 74 of the general laws upon evening classes in independent industrial schools or independent distributive occupations schools, according to which instruction in such classes shall be given only to pupils employed during the day in work to which the instruction so given applies, shall not apply to industrial or occupational schools maintained by the city of Lawrence, for a period of 3 years from the beginning of the school year following the effective date of this act.

SEC. 2. This act shall take effect upon its passage.

EXHIBIT C

Loss of valuation, industrial properties [1]

EXTENSION OF REMARKS

OF

HON. FRANCIS E. DORN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 3, 1959

Mr. DORN of New York. Mr. Speaker, the Boy Scouts of America is this year celebrating its 49th anniversary and the Borough of Brooklyn is doing its part for the worthy cause. I am pleased to bring to the attention of my colleagues a report of an important event which took place in the Borough of Brooklyn. The annual Brooklyn Protestant Boy Scout convocation was held at the Hanson Place Central Methodist Church on February 1, 1959. Former Supreme Court Justice Lewis W. Olliffe, chairman of the Protestant Committee on Scouting, presided. The program was commenced by the massing of the colors; pledge of allegiance and Scout oath; invocation by the Reverend Dr. Floyd E. George, pastor, Hanson Place Central Methodist Church; welcome by the Honorable Lewis W. Olliffe; presentation of the 1959 scouter award was made to William W. Wallace by Vincent H. Jensen, president of the Federation of Protestant Men; greetings from Henry Q. Middendorf, dean of Brooklyn Polytechnic Institute, and Rev. Dr. David M. Cory, executive secretary, Brooklyn division—Portestant Council of the city of New York; presentation of God and country awards was made by the Honorable Lewis W. Olliffe, assisted by Rev. Charles Coker, Rev. Walter F. Jacobs, Rev. Kenneth Lee Rowe, Rev. Dr. S. Soto-Fontanez, Arturo F. Yrizarry, Robert Morris Hubbard, public relations director, Brooklyn Division, Protestant Council of New York, and John J. Hargash, Scout executive.

An inspiring address was delivered by Dr. Robert Fisher Oxnam, president of Pratt Institute, Brooklyn, N.Y. The text of the address was as follows:

AN EXPLORER IN THE CITY

(Address by Dr. Robert Fisher Oxnam)

I

Judge Olliffe, reverend clergy, parents, Scouts, and explorers, it is an honor indeed to participate in this ceremony in what may well be the high point of your scouting career. Just 2 years ago my oldest boy received the God and Country Award. No awards in scouting are come by easily, perhaps, though, this is the most demanding of time, energy, and dedication. This is certainly a time of satisfaction on the part of these young men and, I am confident, a time of justifiable pride on the part of parents.

"To do my best to do my duty to God and my country * * *." In a large city many miles from here and many years ago I became a Scout. I would walk about 4 blocks from my house, get on a subway, and go downtown to a Protestant church where our troop met. Knot tying and signaling, first aid and mapmaking—whole new worlds opened for me—hikes, visits to museums and historical places.

II. THE HARD, LEAN MEN

I believe that it was in Boy's Life that Henry Van Dyke, Presbyterian minister and Princeton professor, wrote:

"Life is an arrow. Therefore, you must know what mark to aim at, how to use the bow, then draw it to the head and let it go."

Early man depended on the bow for food and the defense of his home. The terrible mounted archer of Genghis Khan and later of Tamerlane controlled Asia from the Pacific to the Baltic and from India to the Arctic Circle. The legendary skill of Robin Hood, Chaucer's Yeoman, and Shakespeare's Old Double stir the imagination of Anglo-Saxons and their descendants. Today Robin

stars in a television program and, as usual, the films outdo the literary license of the medieval chronicler.

Robin would have given much for a modern bow, recurved as it is and laminated of glass and wood, using latest engineering techniques. No longer is flax used for the string, but rather a manmade fiber called dacron. The long bow has changed and the gray goose shaft, too. Now, except for hunting, aluminum has replaced wood in the arrow and plastic fletching the feather of the gray goose. Techniques, though, are the same.

Three times during the Hundred Years' War English archers overcame the finest of French chivalry and in each case the archers were outnumbered from four to one to even seven to one. The steadiness of the English archer was unbelievable. This was not only the development of a new form of warfare, but, as a student of government, I like to believe that it had some influence on the political philosophy we revere—democracy. For in it we see the rise of the common man. This archer was no duke, no earl, but an ordinary man, a free man for the most part, a farmer or laborer called by his first name alone. He had beaten the best of European chivalry with the odds many times against him. There was demonstration of the terrible efficiency of massed missile weapons. It hastened the decay of the feudal system and with it the concept of chivalry belonging to the manor born.

There is a kinship between those hard, lean men and the men of Lexington and Concord. There was similar confidence in their weapon, themselves, and the rightness of their task.

There is, too, a parallel between the men of Henry V, of the Black Prince, of Conan Doyle's "The White Company" and the men in the westward movement of our country, the Lewises and Clarks, the Frémonts, as well as the Matt Dillons, the Wyatt Earps of more recent television fame.

Physically our people were strong and hardy. Spiritually they were sure. Intellectually they had a driving desire for more learning, certain that through knowledge combined with freedom and guided by faith would come wisdom. They believed that with freedom and wisdom would come the strength of this great land and its people. Manifest destiny, some called it. "Our place in the sun," others said. This was a young nation growing up. Brash, to be sure; uncultured, perhaps; undirected, not at all.

III. THE GREAT, GRAY CITY

One of our American poets referred to the "great, gray city" as the ideal place for the university. I wonder if it may not be the ideal place for scouting.

As a boy walks across the uneven cobblestone streets in Brooklyn does his mind think that on those same cobblestones once trod Washington, Lincoln, Henry Ward Beecher, Walt Whitman, and S. Parkes Cadman? The history of this city, of our borough, is fascinating, indeed. A portion of the Revolutionary War was fought over the ground on which this church stands.

A boy walks down to the esplanade here in Brooklyn. He cannot help but be excited by what he sees. There on Brooklyn Heights a farmhouse stood. It served as George Washington's headquarters during the Battle of Long Island. There he watched his forces driven before the British. At the foot of the Heights he embarked his men, saving both them and his cause. Just a few blocks farther on is the church of Henry Ward Beecher. From his pulpit came the demand for freedom for all men regardless of color; even today, 100 years later, not fully answered. Abraham Lincoln sat in that church. Just a bit from where we meet, during the Civil War the *Monitor* sailed out to revolutionize naval warfare.

As you look out across the harbor, just off to the left is a statue, the symbol of freedom and liberty. Millions have been heartened by the sight of her as they came to this land in search of freedom. There to the right is the financial capital of the world, the center of industrial responsibility. Farther up the river is the heart of developing international government, our real hope for future peace. Here are colleges, universities, and institutions; galleries and museums, gardens and academies; music, art, theater. Here is knowledge. Here is wisdom. Here is beauty. Here is a laboratory for learning unmatched. These are yours to use, if you wish, as you see fit.

Certainly we have problems. There is ugliness here, too. Here are painfully demonstrated the difficulties of modern urban culture. Beauty in views, in great buildings, in gardens and yet there is unbelievable crowding in cold-water walkups. Where one family lived decently a few years ago, now five families live in the same space. A fantastic influx of people, representing different ways of life, different backgrounds, cast together in a great, sometimes harsh city. From this matrix of diverse races, various faiths, and unlike backgrounds has come the strength of our American culture.

It is healthy indeed for a person to learn and study in this alive atmosphere. Students work harder here than in most localities. Because they must, students quickly learn to concentrate fully on the task at hand. Certainly students are more highly motivated at Pratt Institute than I have seem them anywhere before. Possibly this is as a result of the programs of professional education there. They come with goals clearly selected, whether in engineering or art or architecture or at any of the schools on our campus.

And in scouting, too, there are opportunities for growth, for study, for exploration and for service unequaled here in the city. It was through the courtesy and desire to help of a British Boy Scout in the city of London that the Boy Scouts of America was organized.

IV. "* * * AND LET IT GO"

Dr. Van Dyke said, "Life is an arrow. Therefore you must know what mark to aim at, how to use the bow, then draw it to the head and let it go."

The bower chose the best yew log he could find, split a stave from it, cut it, to form a rough bow. There were hours of shaping, scraping, tillering and careful finishing. Ultimately a fine weapon appeared in his hands. Is there parallel here with education, scouting and a boy?

The arrow too was as carefully made as the bow. Fletchers had the responsibility of selecting shafts, matching them in weight and spine, then affixing the feathers or fletching to be sure the shaft would fly truly. Does this bring to mind the straightness, trueness, the guilding force of our Christian heritage?

Aiming occupies much of the literature of the bow, whether from the pen of medieval or modern writers. One problem each of us has is to identify his own mission. You will certainly accomplish no more than you set yourself to do. You must know what mark to aim at, and then aim with real care.

Van Dyke continued, "Draw it to the head and let it go." Well, the process is a bit more complicated.

It is not just a matter of letting go but rather of releasing cleanly and crisply. Then in this sport as in any other followthrough is vital. True too in life the selection of the goal, the preparation and training—but without the followthrough of determination and persistence, the goal is never reached. I believe that Mr. Van Dyke had this in mind when he used the phrase "and let it go."

V. TODAY'S EXPLORER

No longer are we concerned with arrows as massed missiles in war, but through the unreliable musket to the rifle. We continued to use missiles. And today the era of gunpowder is dying, to be replaced by entirely new weapons systems. It is a long distance from the flint arrowhead of our Indians or the bodkin of the English archer to the atomic or hydrogen warhead of the intercontinental ballistics missile. We have moved far in the development of killing each other more effectively. Have we moved as far in the teaching of the Carpenter of Galilee? Perhaps we have come along the road farther than we think. It makes little difference to the recipient whether it is explosion or implosion. We pray that a situation has been created in which these weapons will never be used; that the consequences of a decision to fire are so disastrous that the decision will never be reached.

A boy stands on the Esplanade and watches ferryboats scuttling back and forth, powerful tugs berthing liners and freighters. Ships stream out to all ports of the world. His eye is caught by a helicopter slowly making its way across the city skyline. He hears the unmistakable sound of a turbo-prop. And his mind turns to jets and then to space. Here is today's explorer.

Mr. Roger Blough, the chairman of the board of the United States Steel Corp., said some time ago:

"The future is not for little men with little minds. It is not for men without vision who fear progress. It is not for timid men. * * * No. The future is for men who dare to have great expectations; and who * * * will also have the courage, the persistence, the wisdom, the patience to transform those expectations into realities."

Today's frontiersman, pioneer, explorer is no longer a man with a long rifle over one arm, or the fast gun. He is a boy curious and critical, dreaming great dreams. He may have a microscope on the table in front of him or a slide rule in his hand. Today the frontiers are more vast and the demands on the explorer greater. Today we must have education for rapid adapation to an exploding universe. These frontiers are gigantic. And no longer are they confined to the people of one nation expanding westward. These explorations will benefit mankind. We need answers to the problem of shelter, warmth, and food for all men. We must know how to use fully all of our natural resources to aid man. There are discoveries in health, in communication, in science, and engineering. And these discoveries will be made. Perhaps even more important though will be progress in the humanities, in man learning to live together and enjoying the abundance which can be his.

Who are these pioneers, these explorers, these lean, hard men of the future? You are.

Mr. Speaker, presentation of the God and Country Award was made to the following recipients: Alfred Dee, William Barg, Charles Arnold, William Rivera, Miguel Rivera, Rafael Sanchez, Emilio Sella, and Ruben D. Cruz.

Rev. Kenneth Lee Rowe, pastor, Boro Park Baptist Church, announced the benediction.

The Byrd Antarctic Commission

EXTENSION OF REMARKS

OF

HON. CLEMENT J. ZABLOCKI

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Monday, January 26, 1959

Mr. ZABLOCKI. Mr. Speaker, I have today introduced a bill to establish the Richard E. Byrd Antarctic Commission, in order to promote a more effective pol-

icy and to better protect our country's interests in the antarctic.

A similar bill has been introduced in the other House by the senior Senator from Wisconsin [Mr. WILEY] for himself and for a number of other Senators.

I am delighted to sponsor this legislation in the House of Representatives. Our Government has been actively interested in the south polar region for over a century. As early as 1838, our Government sent its ships on an expedition led by Lt. Charles Wilkes, of the U.S. Navy, to explore Antarctica. Our interest in the exploration of that vital region has continued and grown in importance to this very day. Today, further exploration and potential utilization of Antarctica is of immediate concern to our Nation.

The proposal embodied in the Wiley-Zablocki bill calls for the establishment of a Commission—appropriately named the "Richard E. Byrd Antarctic Commission" in honor of the great explorer whose name symbolizes man's search into the unknown—which would plan, develop, organize, coordinate, and direct antarctic activities among agencies of the U.S. Government and private institutions so as to promote our national and civil objectives.

The specific duties and major purposes of the Commission would be as follows:

First. To collect, coordinate, and better utilize the available data on the south polar region.

Second. To reevaluate this data in the light of current needs, and, so far as possible, make recommendations for clearer, more effective policies.

Third. To conduct field and laboratory studies to further knowledge of science, commerce, and related activities.

Fourth. To conduct research, investigation, and experimentation in antarctic matters relating to the national defense and other interests of the United States.

Fifth. To assist, and, as necessary, direct plans by other U.S. agencies for operations or expeditions into the antarctic, for military, scientific, or other purposes.

Sixth. To establish a depository of information relating to the antarctic.

It is my sincere hope that this legislation will receive prompt and favorable consideration in this House.

Mr. Speaker, under unanimous consent, I ask to have the text of the Wiley-Zablocki bill printed in the Appendix of the RECORD:

H.R. 5222

A bill to provide for continuity and support of study, research, and development of programs for peaceful uses in science, commerce, and other activities related to Antarctica, which shall include, but shall not be limited to, gathering, evaluating, correlating, and dispersing of information and knowledge obtained from exploration, research, and other mediums relating to weather, communications, travel, and other areas of information; also to coordinate Antarctic activities among those agencies of the United States Government and private institutions interested in or concerned directly with the promotion, advancement, increase, and diffusion of knowledge of the Antarctic; and to direct and administer United States Antarctic programs in the national interest

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That this Act may be cited as the "Richard E. Byrd Antarctic Commission Act of 1959."

DEFINITIONS

SEC. 2. When used in this Act:

(1) "Commission" means the Richard E. Byrd Antarctic Commission.

(2) "Director" means the Director of the Commission.

(3) "Board" means the Board of Governors.

(4) "Commissioned officer" means a commissioned officer of the Armed Forces of the United States.

THE COMMISSION

SEC. 3. There is established in the executive branch of the Government, the Richard E. Byrd Antarctic Commission. The Commission shall consist of a Director, two Deputy Directors, and a Board of Governors.

FUNCTIONS OF THE COMMISSION

SEC. 4. The Commission shall—

(1) maintain a depository of information relating to the Antarctic including: (A) all records of the Commission, (B) originals or copies of records within the executive branch relating to the Antarctic, (C) books, pamphlets, periodicals, and articles dealing with the Antarctic, and (D) such other information as the Commission considers desirable;

(2) conduct such field and laboratory studies and evaluations as it considers advisable to further the knowledge of the Antarctic in science, commerce, and related activities, which shall include, but shall not be limited to gathering, evaluating, and dispersing of information and knowledge obtained from exploration, research and other mediums, relating to weather, communications, travel, and other areas of information;

(3) publish or arrange for the publication of scientific, technical, historical, and general information so as to further the dissemination of information about the Antarctic, when the dissemination is consistent with the interests of national security and the public interest (publication may be made without regard to section 87 of the Act of January 12, 1895 (ch. 23, 28 Stat. 622), and section 11 of the Act of March 1, 1919 (ch. 86, 40 Stat. 1270; 44 U.S.C. 111));

(4) with the concurrence and approval of the Board, perform, at the request of the head of any executive agency, specific research, investigation, or experimentation in connection with matters relating to the national defense and/or the interests of the United States;

(5) approve the plans for and supervise Antarctic operations or expeditions conducted by, or supported by, other agencies of the United States except for operations or expeditions or parts thereof which are military in character;

(6) assist private Antarctic expeditions or research programs when such assistance is in the best interests of the United States;

(7) accept and utilize the service of voluntary and uncompensated personnel and provide transportation and subsistence as authorized by section 5 of the Act of August 2, 1946 (ch. 744, 60 Stat. 808), as amended (5. U.S.C. 73b-2), for persons serving without compensation; and

(8) acquire by purchase, lease, loan, or gift, and hold or dispose of by sale, lease, or loan, real or personal property necessary for, or resulting from, the exercise of authority under this Act;

(9) receive and use funds donated to the Commission if such funds are donated without restriction other than that they be used to carry out the general purposes of this Act;

(10) report to the President before September 16 of each year, summarizing the activities of the Commission and making such recommendations as it considers appropriate. The report shall include the recommendation of the Board.

THE DIRECTOR OF THE COMMISSION

SEC. 5. (a) The Director shall be appointed by the President, by and with the advice and consent of the Senate, for a period of six years and shall be paid at the rate prescribed in section 107(a) of the Federal Executive Pay Act, 1956 (70 Stat.). He may be a person appointed from civilian life or a commissioned officer in an active or retired status.

(b) The Director shall—

(1) manage the affairs of the Commission;

(2) issue such regulations as he considers necessary to carry out this Act;

(3) appoint and fix the compensation of such personnel as may be necessary to carry out this Act; and

(4) be a member of the Board of Governors ex officio.

(c) The appointments made and the compensation fixed shall be in accordance with the Classification Act of 1949 and the regulations of the Civil Service Commission. However, the Director may employ such technical and professional personnel, and fix their compensation, as he considers necessary, without regard to the Classification Act of 1949 or the regulations of the Civil Service Commission. The Director may terminate the employment of any officers or employees, except the Deputy Directors, whenever he considers that termination to be in the best interests of the United States, except that no person in the classified service may be removed or suspended without pay unless it is accomplished under the Act of August 24, 1912 (ch. 389, 37 Stat. 555), as amended (5 U.S.C. 652).

DEPUTY DIRECTORS

SEC. 6. (a) The Deputy Directors shall be appointed by the President, by and with the advice and consent of the Senate, and shall perform such duties as he may prescribe.

(b) The Deputy Directors may be appointed from civilian life or may be commissioned officers in an active or retired status. However, if the Director is appointed from civilian life, only one Deputy Director may be a commissioned officer. If the Director is a commissioned officer, both Deputy Directors shall be appointed from civilian life.

(c) The Deputy Directors shall be paid $ a year.

MILITARY STATUS OF DIRECTOR AND DEPUTY DIRECTORS

SEC. 7. (a) When a commissioned officer is appointed as Director or Deputy Director, he is not subject to military authority and may not exercise command over any members of the Armed Forces of the United States except as the President may prescribe.

(b) The appointment of a commissioned officer as Director or Deputy Director does not affect his status or rank or the pay and allowances incident to his status or rank. He is entitled to receive the pay and allowances payable to an officer of his rank and length of service, for which the appropriate department shall be reimbursed from any funds available to defray the expenses of the Commission. He is also entitled to be paid by the Commission the amount by which the compensation provided for the Director or Deputy Director exceeds his annual military pay and allowances.

BOARD OF GOVERNORS

SEC. 8. (a) The Board—consisting of eleven members—shall be appointed by the President, by and with the advice and consent of the Senate. The Board shall consist of the President of the National Academy of Sciences; Director of the National Science Foundation; Secretary of Defense; Secretary of State; Secretary of Interior; Secretary of Commerce, or their designees, plus four selected from civil life who are eminently qualified in their professions so as to provide, in addition to Federal administration, a broad field of knowledge and experience

which will properly relate the activities of the Commission to the national welfare.

(b) The members of the Board, in addition to the President of the National Academy of Sciences; Director of the National Science Foundation; Secretary of Defense; Secretary of State; Secretary of Interior; Secretary of Commerce, or their designees, shall be appointed for a period of six years, except that, (1) any member appointed to fill a vacancy occurring before the expiration of the term of his predecessor shall be appointed for the remainder of the term; (2) the term of office of the members first taking office after the date of enactment of this Act shall expire, as designated by the President at the time of appointment, one at the end of two years, one at the end of four years, and two at the end of six years, and (3) a member may be reappointed to the Board for not more than one additional term; and (4) the members of the Board who are Cabinet members shall be members of that Board during the tenure of office as Cabinet members.

(c) Members of the Board shall be paid at the rate of $50 per day—for each day—except members of the President's Cabinet during their services as members of the Board, and shall be allowed travel expenses as authorized by section 5 of the Act of August 2, 1946 (ch. 744. 60 Stat. 808), as amended (5 U.S.C. 73b–2).

(d) The Board shall—

(1) meet annually on the first Monday in November and at such other times as the Chairman determines;

(2) elect a Chairman and Vice Chairman, at the regular annual meeting, to serve for the following year;

(3) review and assess the research and exploration activities relating to the Antarctic; and

(4) make such recommendations to the Commission as they consider appropriate for the advancement and dissemination of knowledge of the Antarctic.

RESEARCH CENTERS

SEC. 9. (a) Under the provisions of this Act there shall be established a minimum of five, and not more than eight, research centers at academic and/or research institutions having special competences or interests in scientific aspects of polar research.

The Commission shall determine that each such center shall meet criteria prescribed by the Commission under the policy guidance provided by the Board of Governors, and the Commission shall be responsible for the overall development and coordination of programs of research which may be approved for development within the research centers in, and related to the Antarctic region. Such programs of research as may be initiated at the research centers with the approval of the Commission shall be supported by Federal or private funds.

(b) Due to the unique requirements of polar research, a designated number of fellowships shall be provided to permit qualified students to conduct studies at the research centers and also in Antarctica. The Commission shall be authorized to grant funds in support of fellowships specifically associated with polar research, recommended by the Director of the Commission and approved by the Board of Governors.

SERVICES AND FUNDS OF OTHER AGENCIES

SEC. 10. (a) The Commission may, with the consent of the agency concerned, accept and utilize on a reimbursable basis the officers, employees, services, facilities, and information of any agency of the United States. However, such services and facilities may be furnished only if it does not interfere with the performance of the primary mission of the agency concerned. An agency having custody of data relating to the matters within the jurisdiction of the Commission shall, upon request of the Director, make that data available to the Commission without reimbursement.

(b) Funds available to any agency of the United States for scientific or technical research, educational, or other public service are available for transfer, with the approval of the head of the agency concerned, to the Commission for such use as is consistent with the purposes for which those funds were provided. Funds so transferred shall be spent by the Commission for the purposes for which the transfer was made or for general administrative expenses until such time as an appropriation is made available to the Commission.

ACTS AMENDED

SEC. 11. Subsection 107(a) of the Federal Executive Pay Act of 1956 is amended by adding the following after clause (22):

"(23) Director of the Antarctic Commission."

SEC. 12. Section 505 of the Classification Act of 1949, as amended (70 Stat. 762; 5 U.S.C. 1105), is amended by adding the following subsection:

"(f) The Director of the Antarctic Commission is authorized, without regard to any other provision of this section, to place a total of seven positions in the Antarctic Commission in grades 16, 17, and 18 of the General Schedule. Such positions shall be in addition to the number of positions authorized to be placed in such grades by subsection (b)."

Adjudication of General Kosciuszko's Wills

EXTENSION OF REMARKS

OF

HON. JOHN W. McCORMACK

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 3, 1959

Mr. McCORMACK. Mr. Speaker, under permission to extend my remarks I include a very interesting article entitled, "Adjudication of General Kosciuszko's Wills" written by a very close and personal friend of mine of many years, Mr. Anthony O. Shalina, A.B., LL.B., which informative article appeared in the Massachusetts Law Society Journal, vol. XX, December 1949:

ADJUDICATION OF GENERAL KOSCIUSZKO'S WILLS

(By Anthony O. Shalina [1])

A testator's last will and testament should reflect his aims, character, and nature. Very often for one reason or another that is not accomplishment. A person may be an expert in several vocations yet fall short of drawing a will that puts into effect his desires and wishes after he passes on. Gen. Thaddeus Kosciuszko's four wills may illustrate beyond a doubt that the drawing of a will is a highly technical document to be executed with a great deal of care and skill.

Among the foreign officers in the American Revolutionary War like Lafayette, Von Steuben, and DeKalb, there was a young colonel who landed here in 1776 from Paris with a letter of introduction from Benjamin Franklin to George Washington. In time he became General Washington's aide-de-camp and terminated his services for our country with the rank of brigadier general. Having received a substantial grant of land and money from Congress, Gen. Thaddeus Kosciuszko before departing for Europe drew a will on May 5, 1798, in which he expressed him humanitarian views:

"I, Thaddeus Kosciuszko, being just on my departure from America, do hereby declare and direct that, should I make no other testamentary disposition of my property in the United States, I hereby authorize my friend Thomas Jefferson to employ the whole thereof in purchasing Negroes from among his own or any other and giving them liberty in my name; in giving them an education in trade or otherwise; in having them instructed for their new condition in the duties of morality which may make them good neighbors, good fathers, and mothers, husands, and wives, in their duty as citizens; teaching them to be defenders of their liberty and country, of the good order of society, and in whatsoever may make them happy and useful."

After some unfortunate experiences with Russia in trying to liberate the Commonwealth of Poland and Lithuania (beginning with 1386, supplemented by several treaties, the Grand Duchy of Lithuania and the Kingdom of Poland were united under the Commonwealth of Poland until the third partition in 1795) he located in Paris and drew his second will or perhaps a codicil on June 28, 1806. In this will he makes reference to the aims expressed in his first will and he makes a special bequest to Kosciusko Armstrong, a son of his friend General Armstrong. From a photostatic copy of the original will and affidavit of proof, which are historical documents, one may read General Kosciuszko's fondest thoughts and history correcting data, namely:

"Know all men by these presents that I Thaedo Kosciusko formerly an officer of the United States of America in their Revolutionary War against Great Britain, and a native of Lithuania in Poland, at present residing at Paris, do hereby will and direct that at my decease the sum of Three thousand seven hundred and four dollars currency of the aforesaid United States shall of right be possessed by and delivered over to the full enjoyment and use of Kosciusko Armstrong the son of General John Armstrong Minister Plenipotentiary of said States at Paris, for the security and performance whereof, I do hereby instruct and authorize my only lawful Executor in the said United States, Thomas Jefferson President thereof to reserve in trust for that special purpose, of the Funds he already holds belonging to me, the aforeseaid sum of Three thousand seven hundred and four dollars in principal to be paid by him the said Thomas Jefferson immediately after my decease, to him the aforesaid Kosciusko Armstrong and in case of his death to the use and benefit of his surviving Brothers.

"Given under my hand and seal at Paris this 28th day of June 1806.

"THADE KOSCIUSZKO.

"In presence of Charles Carter and James M. Morris."

"COMMERCIAL AGENCY
OF THE UNITED STATES,
Paris.

"On this 28th day of June in the year of our Lord 1806 and of the Independence of the United States of America the thirtieth, before the undersigned, commercial Agent and Agent of Prize-Causes for the United States of America at Paris, personally appeared Thade' Kosciuszko, late officer of the said United States, who in his presence signed and sealed the foregoing Transfer in favor of Kosciuszko Armstrong, the son of General John Armstrong, Minister Plenipotentiary of the United States at Paris, and in case of his Death to the use and benefit of his surviving Brothers, and did acknowledge it as his own act and deed for the purposes therein specified.—

[1] Member of the Boston Bar and a vice president of the Law Society.

"In testimony whereof he the said undersigned as aforesaid has hereunto signed his name and affixed his seal of office at Paris the day and year above written.

"FULWAR SKIPWITH."

"DISTRICT OF COLUMBIA,
"*Washington County, to Wit:*

"The 19th day of November 1828, James M. Morris, one of the subscribing witnesses to the aforegoing instrument of writing, purporting to be the late will and testament of Thadeus Kosciusko, deceased, made oath on the Holy Evangels of Almighty God that he did see the testator therein named sign that this will—that he published, pronounced and declared the same to be his last will and testament—that, at the time of his so doing he was, to the best of his apprehension, of sound and disposing mind, memory, and understanding—and that he, together with Charles Carter, the other subscribing witness, respectively subscribed their names as witnesses to this will, in the presence and at the request of the testator, and in the presence of each other.

"Sworn in open court.

"Testator HENRY C. NEALE, *Rg. Wills.*"

On June 4, 1816, he drew an olographic will as his third will, apparently revoking the prior wills. In this will, made at Soleure, Switzerland, he used this language: "I, the undersigned Thaddeus Kosciuszko, residing at Berville, in the township Genevrage, of the Department of Seine and Marne (being now) or at present at Soleure, in Switzerland."

His fourth will was drawn October 10, 1817, and in this will nothing is said as to his residence.

General Kosciuszko was more than a good general. He was an outstanding humanitarian—a forerunner of the abolishment of slavery. He preceded President Lincoln by about 65 years in taking steps to abolish slavery both in this country and in Europe.

Biographers, historians, and others who have tried to present General Kosciuszko to us have made use of his will of 1798, but have not even made a reference to his second and other wills. Any degree of research should have brought forth the existence of these other wills. It was the will of 1806 that was analyzed and substantiated by our Supreme Court.

The record in the administration of Kosciuszko's estate has been correct but not all of us have been apprized of it. Since this case had been considered at length by the U.S. Supreme Court and the documents and proofs in this cause from the orphans' court, the genealogy of the Kosciusko family and the collateral relatives of the persons entitled to a decree, and also the wills of Kosciuszko are properly in evidence in this suit and the record from Grodno is judicial, not a judgment inter parties, but a foreign judgment in rem, "which is evidence of the facts adjudicated against all the world," we might state the essential and interesting parts of the Court's opinion.

With the will of 1816 revoking the wills of 1798 and 1806 and no disposition having been made in it or in the will of 1817 of the funds in controversy, as to which General Kosciuszko died intestate it became necessary to find out which relatives may be entitled to inherit from him according to the law of his domicile at the time of his death.

In proceedings to the question of domicile the Court said, "In the will of 1806 he describes himself as 'an officer of the United States of America in their Revolutionary War against Great Britain, and a native of Lithuania in Poland, at present residing in Paris.'"

In the will of 1816 he refers to his residence in Switzerland. And in the will of 1817 nothing is said as to his residence. There was no proof that he was not in France continuously until 1815 when he went to Vienna.

The Court also observed that "Kosciuszko's domicile of origin was Lithuania in Poland." The presumption of law is that the domicile was retained unless the change is proved and the burden of proving it is upon him who alleges the change. The Court ruled that from his own declarations and other proofs in the record that he was domiciled in France at the time of his death.

The Court then ordered, adjudged, and decreed that the legal domicile at the time of his death in 1817 was in France, that the will of October 10, 1817, had not disposed of the funds in this country; that the fund in this country is to be distributed according to the law of France, the place of his domicile at the time of his death, and that the said fund belongs to the lineal descendants of the two sisters of Kosciuszko.

In fairness and justice to a man who had tried to be so helpful to the country of his adoption, to his native land and humanity it should be stated that he was a great engineer and the founder of West Point Military Academy.

The Ultimate Consumer Pays the Bill

EXTENSION OF REMARKS
OF
HON. BEN F. JENSEN
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 3, 1959

Mr. JENSEN. Mr. Speaker, under leave to extend my own remarks in the RECORD, I insert therewith two articles from the February issue of that popular magazine Nation's Business. These articles are timely and good, and, in my opinion, they express the feeling of every American who reads and thinks for himself, and who is not swayed by political expediency.

Modern liberals, both in and out of Congress, vigorously—yes, blindly—support most every request for public spending, regardless of its need, on the theory it will help the little fellow and the wage earner. They forget to tell you that the ultimate consumers of goods and food—you—pay all the taxes brought on by the spending of every public spending body—municipal, county, State, and Federal—and that the so-called little fellows and the wage earners are by far, as a whole, the greatest consuming group in America.

However, our farmers are the greatest per person taxpayers, since our farmers buy and consume, on an average, over twice as many dollars' worth of manufactured goods when their dollar is worth 100 cents at the counter, than do our other average consumers per person when their dollar is on par value with the farmer's dollar.

These modern liberals forget to explain that privately owned taxpaying industry—from the peanut vendor to the corner grocer, to the privately owned partnerships, large and small companies and corporations—must add every and all taxes to the cost of the goods they sell in order to make a reasonable profit, or they would very soon be out of business. Remember, you are already paying 30 cents in taxes in every dollar you spend for food and goods.

So, when every taxing body—including the United States Congress—appropriates the people's money, your money, you so-called little people must pay the greater part of the bill, for, as I said before, you are our greatest consumers.

History records that every nation on earth who embarked too long on a reckless spending spree full speed ahead—such as our reckless spenders have done for years and years—has lost its liberties and has suffered every known misery for its folly.

For this reason, I plead with you who read and think through to join with those of us who are trying our very best to avoid national bankruptcy and all of its attending sufferings, by not only holding our President's budget, but to reduce it wherever it is safe and proper to do so.

The articles follow:

OUR TIRED LIBERALS

The most abused word in political use today is "liberal."

Originally it identified men who brought new and refreshing thinking to the art of government. These men dared to challenge the idea that those to whom birth or votes had given authority were necessarily all-wise and therefore deserved to be all-powerful. They fought to win for the individual the privilege of proving his own capacity to meet the buffetings of life.

Now the word "liberal" has been perverted to cover those of a completely opposite philosophy. Today we are asked to believe that the liberal government is that which most persistently undertakes to meet the people's needs. What the people need is a matter that the new liberals have felt free to decide among themselves. The right of individual achievement is not included.

Those who push this philosophy today find themselves in an awkward straddle. To fulfill their dream of security for everybody would require money that the Federal Treasury doesn't have and has little chance of getting. To give their goals a semblance of soundness, the liberals must first prove that temporary insolvency is a governmental virtue, because it will lead to a glorious new day.

They are trying frantically to do this by insisting that any effort to hold the government's debt in line, to counteract inflation, to reduce the size of monumental expenditures is fiscal irresponsibility.

The President's budget which attempts to do these things, is, they tell us, a tired budget, the product of old-fashioned thinking which cannot recognize future tax potentials and new concepts of Federal service and achievement.

This argument compels attention.

Certainly we cannot afford tired thinking. Let us listen to the new concepts and examine the financial legerdemain that makes them possible to attain without bankruptcy.

At this point, the liberal promises turn to ashes. We can pay for their schemes, they tell us, because the country is entering on such a period of expansion that tax revenues soon will be sufficient to cover any sort of government extravagance.

This rosy prediction overlooks the truth that both expansion and taxes come from profits and, in the liberal philosophy, profits are wicked. Congressional committees are already hectoring or preparing to hector every major industry. A half dozen bills introduced or proposed would complicate or cripple the procedures by which business and industry expand operations, open job oppor-

tunities and introduce better products more cheaply.

If expansion actually does bring the increased revenues for which the liberals hope, it will come in spite of them rather than because they planned it that way.

But with expansion or without it we still have no room for tired thinking. We need new ideas, new concepts, new vision in government.

What do the liberals bring of these?

The list is tragically disappointing: Federal intervention in schools; subsidies for depressed areas; minimum wage legislation; a housing program; veterans' programs; a farm subsidy program—all tired old ideas.

Some have been tried with doubtful success. Others the American people, through their Congress, have rejected in the past as unsound and undesirable.

Compared to this reiteration of political cliches the President's proposal for a balanced budget has the brilliance of sheer originality.

The tired thinking of the pseudoliberals offers little temptation to upset it.

WHAT'S AT STAKE IN WASHINGTON

Congressional action in coming weeks will have a far-reaching effect on the climate in which you operate as a businessman.

Votes cast by the Nation's lawmakers will affect the taxes you pay, the freedom with which you can make business decisions, your relations with labor—even the nature of the competition you face from other businesses.

The central, dominating issue before Congress is the soundness of the American economy. The shadow of this issue will fall across a universe of smaller issues, for the majority of bills already introduced in the 86th Congress would require spending of additional billions of tax dollars. Such expenditures, fiscal authorities say, could capsize the administration's hopes for a balanced budget, add to the already huge Federal deficit, and send the inflationary spiral soaring to even more dangerous heights.

Following are concise reports on the major business-related issues facing Congress. Covered are proposals concerning social security, Government restrictions on business, labor legislation, taxation, defense spending, and other issues.

Included with the individual summaries you will find a statement of the position which the U.S. Chamber of Commerce, as spokesman for organized business, has taken on each of the key issues.

INFLATION

The issue

Considering the current state of the economy and probable economic trends during fiscal 1960 (which starts July 1, 1959):

1. What can be done to prevent inflation from lowering the value of the dollar?

2. What should be the proper relationship between revenues and expenditures in the Federal budget for fiscal 1960?

3. How much can be saved by reducing less essential Federal activities and improving efficiency in Federal operations?

The Federal Government is running a deficit of almost $13 billion. It is having difficulty financing its debt. It has strained existing tax resources to the limit. It is faced with mounting national and international pressures for more spending.

The solution

The U.S. Chamber will review the President's budget and make recommendations for economy and efficiency to congressional committees.

It will urge legislation to curb the monopoly power of unions.

It will suggest to Congress the establishment of an impartial study group to devise a new tax structure that will stimulate economic growth. It will urge amendment of the Employment Act of 1946 to provide that the Government shall be responsible for controlling inflation as well as promoting maximum levels of employment and production.

The chamber will continue to develop public support for Federal Reserve Board efforts to hold down inflation.

DEFENSE

The issue

Whether President Eisenhower's $40.9 billion defense budget is adequate or whether the administration program fails to meet the threat of Russia's military might.

The solution

Though in a situation so complicated no single recommendation is possible, the chamber's objectives are to have an adequate national security at a minimum cost; a simplified defense appropriation structure for better control of funds; improved defense organization and management; and curtailment of commercial-industrial activities of the Department of Defense.

Dollars alone will not buy security. Devoting energies and resources to the point of weakening our economic system will defeat the effort to build a strong, well-rounded defense system.

The chamber will analyze the 1960 defense budget. It will urge Congress to restrict military programs to those of a compelling necessity; close unnecessary facilities; set a deadline for curtailing unnecessary commercial-industrial activities and use the new powers under the Defense Reorganization Act.

PROCUREMENT

The issue

Many provisions of the Armed Services Procurement Act of 1947 are obsolete and contribute to delays and unnecessary expenses. The act governs how more than $22 billion of the annual defense budget is spent.

Because of legislative and administrative restrictions, our defense procurement system does not make full use of the vast industrial ingenuity and resourcefulness that has put the United States ahead of the rest of the world in the production of top-quality, low-cost, nondefense products and services.

The law still stresses a highly formalized type of procurement that is impractical and uneconomical in buying some complex military equipment, and discourages use of the method of procurement that experience has demonstrated is the most efficient and economical for 90 percent of the dollar volume of such purchasing.

At a time when our security could be threatened by a month's delay in procuring a new weapon, the United States is taking twice as long as Russia in converting many of its ideas for new weapons into finished products.

The solution

The chamber will support the major objectives of legislation which Senator LEVERETT SALTONSTALL, Republican, of Massachusetts, has reintroduced to overhaul the Armed Services Act.

Also, the chamber will urge that the Renegotiation Act be allowed to expire next June 30, and that defense contractors be indemnified against unusual hazards.

MILITARY MANPOWER

The issue

Congress must decide for how long and in what form to extend the draft law in the light of rapidly changing military manpower requirements and the increased importance of expanding our scientific and technical education programs.

Manpower is much more than a military problem. We have one labor force and the demands on it, particularly in time of national emergency, must be well coordinated.

Although our military manpower requirements have dropped to 2.5 million, a much larger percentage of the active forces must be technical and skilled.

The solution

Extension of the draft law in some form is generally accepted as necessary.

Previous extensions have been for 4 years. Congress should consider manpower problems more frequently than that.

The chamber urges a 2-year extension because:

A quality career force is being developed.

Reenlistment rates are continuing to increase.

Secretary McElroy anticipates further reductions in manpower strength.

The problem of obtaining inductions at an age lower than 23 should be dealt with either by amendment or administrative action.

LABOR RELATIONS

The issue

What laws are needed in the labor-management field to bring fair play to the public, to employees and to employers?

The issue is important to the businessman because labor costs and other labor problems are among the most worrisome matters with which businessmen have to deal. The entire future of our economy depends in great measure on the skill with which these questions are handled.

Only if there is a greatly aroused public opinion on the question will Congress seriously undertake to do anything about it. With a growing number of Members of Congress beholden to labor because of campaign contributions and other support, there is a hard core who are against action which would go to the heart of this important matter. In fact, there is likelihood that efforts will be made to give labor still more power.

The solution

The chamber recommends equal treatment under law as a means of solving the problem. Such treatment would mean curbing the monopolistic abuses by unions and compelling fair play on their part, just as such requirements have long been imposed upon employers.

The argument most frequently used against the chamber's position is that the businessmen's basic purpose is to destroy unions.

The principal arguments for the chamber position are that Federal and State protection of the right to organize has placed tremendous power in the hands of a few labor leaders. This power has resulted in corruption and abuses. The victims have been the public, employees and employers.

Business long ago was brought under the antitrust laws, the fair trade laws, the Securities Exchange Act, and other laws which compel fair play. Unless we are to have a harmful imbalance in our society, big labor's activities must likewise be regulated.

EDUCATION

The issue

Shall Federal spending and decision making further direct the adjustment of American education to the space age, or shall school needs be met by State and local resources?

More Federal intervention means:

1. Increased Federal taxes for education, and Federal intervention in school systems and colleges.

2. The transfer of decisions affecting public schools from local and State governments to the Federal Government.

3. The loss of autonomy by private schools and colleges, as they become more dependent on Federal grants, or loans, or contract programs.

Members responsible for the National Defense Education Act urge that Congress increase the areas covered and the amount of

Federal intervention into education. Many indicated at the end of the 85th Congress that the National Defense Education Act was "but a step along the road we must travel in Federal financing of education." Likely further proposals are grants for school construction and to improve teacher salaries.

Those favoring more Federal intervention in schools argue that the space age has created demands for trained manpower which State and local school improvements cannot meet.

On the other hand, no manpower emergency has been demonstrated, beyond the chronic need for scientists. State and local school authorities are providing dynamic leadership toward the solution of space-age curriculum requirements. At the same time, school construction, except in rapidly growing suburban areas, has more than kept up with enrollments.

The solution

The chamber recommends that school needs be assessed by local and State leaders—both educators and laymen—and that their resources be fully used to provide educational support and to increase the efficiency with which school revenues are spent. Only when an emergency exists which is clearly beyond the resources of a State and its communities should any program of Federal intervention be considered, even on a temporary basis.

Local chamber education committees and congressional action committees should help educators assess their school needs and find the resources to meet them.

The controversies over curriculums and teaching methods cannot be satisfactorily resolved through national legislation or administrative decrees, but must be left to a diversity of experiment in the thousands of school systems where local initiative can better adapt schools to the needs of the communities they serve.

TAXATION

The issue

Through our Federal system of taxation we pay for our freedom as well as for the goods and services of national government.

The demands and pressures for revenue are high.

The Communist threat dictates a continuing national policy of heavy defense spending. More than half of Government outlays are for protection.

Pressures to commit the balance of Federal tax money for more services, grants, benefits, aids, and projects are growing at a rate that now exceeds that of the income produced under our tax laws.

Unwise taxation will ultimately destroy the incentive to produce and the ability to invest in economic growth.

Investment is necessary to provide the jobs for our expanding labor force and for our national defense.

During this session of Congress hundreds of bills will be introduced to change either our tax rates or our tax system. Most of these will receive scant consideration. Representative WILBUR MILLS, chairman of the Ways and Means Committee, has indicated that the committee will limit itself to technical and administrative changes. However, he has called for eventual uniformity, simplification, and broadened tax base.

The solution

We must choose between a tax system which by its nature retards our potential economic growth through destruction of traditional sources of investment capital or development of a tax system which will permit individual savings and resultant investment.

If we are to maintain Federal budgets at or above this level without doing irreparable harm to the economy, it is essential that we so stimulate the tax base as to create an economy that is sufficiently healthy to withstand this continuing drain.

Basic to our need is an impartial study group which will take a keen look at the strengths and weaknesses of our present tax system, investigate the tax systems of others nations, and devise a tax structure which will stimulate our national economic growth.

This period of huge Federal deficit, with its prospect of more to come, is ideal for this type of effort.

CONTROL OF BUSINESS

The issue

Fundamental to the American way of life is the principle of minimum Government interference in citizens' activities. The foundation is being laid, however, to substitute Government controls for freedom of economic activity in:

Mergers: Legislation under consideration would require certain companies to wait until a Government review period expired before merging.

Mergers are a normal part of business operations and help stimulate the Nation's growth and development. The proposed legislation would result in frustrating delays and discourage beneficial mergers.

Pricing: Some members of the Senate Judiciary Subcommittee on Antitrust and Monopoly are accusing large firms in key industries of setting so-called administered prices.

In our free society, what is produced and its price are regulated by the market. Administered prices are not a contributing cause to inflation, but rather tend to reflect costs—predominately wage-pushed costs.

Minimum wage coverage: It is proposed to extend Federal minimum wage and premium overtime pay regulations to employees of retail and service trades who have always been exempted from coverage because of the local character of retailing and services.

Such extension would interfere with the mainenance of a proper balance between Federal and State authority in interstate and local commerce. Extending coverage would also add to the inflationary spiral by setting wage levels without regard to productivity and causing employees earning more than the minimum to demand more pay to protect established differentials. It would hurt small business most.

The solution

Government should not control beneficial mergers. Those few mergers which might adversely affect competition can and should be dealt with by proper application of antitrust laws.

There is no justification, either, for Federal interference with normal price-making procedures. Prices adjust to changes in supply and demand.

Exemption of retail and service trades employees, which has existed for good reason since the wage-hour law was passed more than 20 years ago, should be continued.

SOCIAL SECURITY

The issue

Should social security pay benefits large enough to live on comfortably? Should costly new benefits be established?

The present schedule of benefits promised by Congress to the aged person, to his dependents, to family survivors requires virtually doubling the tax rate by 1969, and an increase in the taxable wage base now in effect from $4,200 to $4,800. This means more than doubling the current tax burden upon many employers and employees.

Under the present law a higher taxable wage base has become effective in 1959, and the taxes on employers and on covered workers will be increased in 1960—and 1963, 1966, 1969.

The solution

The chamber recommends that social security pay monthly cash benefits sufficient to prevent want and destitution to people who, because of age, are unable to support themselves.

It is argued that benefits should be made sufficient for a person to live in decency and self-respect. Another argument is that benefits should be increased because of the higher cost of living and to reflect higher levels of pay and rising productivity. Labor leaders contend that workers are willing to pay their fair share toward higher benefits and for new kinds of benefits.

The facts are, however, that the financial soundness of social security must be preserved. This financial soundness depends in large part upon a continued willingness of workers to pay the necessary social taxes. Since the full tax burden of the presently scheduled benefits will not be fully felt until 1969, bigger and new kinds of benefits should not be put into the law until we know for certain that the covered workers in 1969 will be willing to carry twice as large a tax burden as at present.

Moreover, each person is expected to build additional old-age income through his own efforts.

URBAN RENEWAL

The issue

Can cities revitalize their blighted areas, or is permanent and increasing Federal assistance needed?

The 86th Congress has been asked to authorize a 10-year urban renewal program of $600 million annually. This has been coupled with proposals to increase the Federal share in this program from the current 66⅔ percent to as high as 90 percent. Added to measures already introduced are requests to expand the program to include substantial financing for renewal of areas for commercial and industrial development. The program now is predominantly residential.

The commercial and industrial renewal feature will be sought through normal housing legislation, and will probably be a significant point in any depressed area legislation as it was during the last Congress.

The solution

The chamber recommends a gradual reduction of the Federal share in this type of activity to a point where it can ultimately be phased out completely. The chamber has suggested means by which cities can approach their individual problems without seeking substantial Federal assistance.

The chamber points out that many cities have already accomplished much on their own initiative. Pittsburgh; Flint, Mich.; Baltimore, and Indianapolis, to name a few, have shown that they can do a tremendous job on their own.

Moreover, the whole of the $1.4 billion urban renewal capital grant fund has been tied up by a mere 3 percent of America's more than 17,000 communities. Assuming that many more cities will want urban renewal funds, and that existing participants will request increases, the program could become unmanageable.

DEPRESSED AREAS

The issue

Must all taxpayers be compelled to subsidize a relatively few areas with chronic unemployment, or can this problem be met by States and localities, helped by business organizations, without Federal aid?

A new area redevelopment bill, going far beyond the $279 million measure pocket-vetoed last September comes before the new Congress. It is a major goal of labor unions and will have the support of many newly elected Congressmen. Proponents of this legislation argue that Federal aid to depressed areas is long overdue; that relief of chronic unemployment is beyond State, local, and private resources.

Depressed areas are generally described as those with 6 percent or more unemployment.

The solution

The national chamber believes that the real problem is to determine exactly what industries can succeed in these areas, what changes must be made to attract them. Healthy economic recovery depends on finding productive job opportunities. It can best be brought about by aggressive, local industrial development organizations, backed where necessary by privately financed statewide credit corporations. This approach stimulates local initiative. It is also clear that a Federal-aid program might well use your community's tax money to help finance industrial development for a competitive community.

A Federal subsidy program often continues and expands, even though the original need has been met. Pressures to extend aid on looser terms would be difficult to withstand. More money would be requested.

PUBLIC HOUSING

The issue

The basic issue here is whether housing for special segments of the population should be subsidized by tax funds.

Begun on a small scale in the 1930's, the subsidizing of housing has grown until the Federal Government now materially supports more than 500,000 units.

The program lost sight of its original low-income character when Congress, in 1957, revised the formula for determining net income for residence in public housing so that a family earning $9,800 a year could live in some projects.

In many communities public housing has invaded the private market and the community is deprived of necessary taxes.

As of June 30, 1957, the Government was committed to annual contributions of nearly $200 million to cover subsidies to local public housing authorities, and the program showed a net deficit of more than $600 million.

In more than 20 years of operation the program has failed to upgrade housing to any extent.

The solution

The chamber has recommended continuing enforcement of local housing codes as a means of halting the growth of substandard housing from which public housing residents supposedly come.

The provision of decent, safe and sanitary shelter is a local responsibility and should be met according to local requirements through a combination of private enterprise and local welfare action.

Nepotism

EXTENSION OF REMARKS

OF

HON. W. J. BRYAN DORN

OF SOUTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Monday, March 2, 1959

Mr. DORN of South Carolina. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the Greenville (S.C.) News:

FAVORS TO KIN—NEPOTISM NOT FOUND AMONG STATE SOLONS

(By W. D. Workman, Jr.)

COLUMBIA.—With the Washington spotlight focused on the congressional habit of putting wives, sons, and relatives on the official payroll, the time is ripe for a look at South Carolina laws on nepotism.

Section 50-101 of the State code of laws has this to say on the subject:

"It shall be unlawful for any person at the head of any department of this government to appoint to any office or position of trust or emolument under his control or management any person related or connected with him by consanguinity or affinity within the sixth degree."

ACT SETS POLICY

That act establishes a State policy which frowns on nepotism, but the law leaves all sorts of loopholes for placing relatives on payrolls so long as the favored person is not related to the department head himself. And then, there is the question of just who is the head of the legislative department of the State government, for members of the general assembly frequently succeed in having sons or other relatives appointed as pages or other legislative attachés.

No thoroughgoing inquiry has been made in recent years, but there has been little complaint of any undue nepotism in South Carolina.

Garnishment

EXTENSION OF REMARKS

OF

HON. RICHARD E. LANKFORD

OF MARYLAND

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 3, 1959

Mr. LANKFORD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the sixth of a series of articles dealing with garnishment in the District of Columbia:

DEBTOR'S DILEMMA: NEW BILL WOULD ENABLE MAN TO PAY DEBTS, FEED FAMILY

(By Morton Mintz)

(Sixth in a series)

In cookery the word "garnish" has a gentle, pleasant ring. In District law the same word is like the screech of a braked tire.

The District Bar Association is trying to take the terror and tragedy out of garnishment and put it under the wing of justice.

The bar proposal for reform has been introduced in House by Representative JOHN L. MCMILLAN, Democrat, of South Carolina).

A bar director, James A. Willey, is leading the fight for adoption. He is a member and past chairman of the bar's municipal court committee.

The bar proposal recognizes the principle of ability to pay. It sets a sliding scale of garnishments based on a debtor's earnings, as follows: On gross pay up to $200 a month, 10 percent could be attached; $200 to $500, 20 percent; more than $500, 50 percent.

The bar measure would allow only one attachment to be effective at one time. Only after one creditor's debt is satisfied could other attachments take effect, in the order received. The employer would forward the creditor's money once a month.

CALLS FOR CLOSE LOOK

These two provisions say to the easy creditor: Collection from bad risks via attachment can take you a long, long time, and you have an incentive to withhold credit from persons who are bad risks.

It is chiefly in this way that the bar proposal attacks a root trouble in the present situation, the indiscriminate extension of credit. The message of the existing law is caveat emptor—let the buyer beware. The bar proposal would add a large dose of caveat venditor—let the seller beware.

The bar says that if its proposal becomes law, the seller might well beware, for example, of the man whose pay is already being attached.

The proposal would make it impossible for attachment to strip a man of his entire pay.

Neither he nor his employer would have to go to municipal court to prove his eligibility for exemption, for he would get an exemption automatically. The trip to municipal court now must be made for each attachment on which an exemption is sought. Debtors sometimes get worn down by this procedure and lose vital time from work. So they accept a settlement under which they agree to buy more.

Because an employed debtor could not be left penniless by attachments, the incentive (in the present law) for an impoverished husband to desert his family would be removed. As explained in Tuesday's article, he risks imprisonment and/or a fine when he deserts. However, he also assures that, once a court support order is issued, his family will be able to eat and pay the rent.

SEE LESS OPPORTUNITY

Willey says the delayed-collection provisions would curb the present practice of making innocent persons responsible for easy credit debts they did not incur. He says there would be fewer of them because they would be less inviting targets, and they would not be hit so hard.

Other major features of the bar proposal provide that:

A court order to a man to support his wife, former wife, and/or children would have priority over any attachment. There is more caveat venditor here, for a debt for clothing, jewelry, or a car, for example, could not come ahead of family needs.

Wage exemptions would be extended to nonresidents of the District on the same basis as to District residents—automatically. Nonresidents get no exemption under existing law.

Last year the House passed an earlier bill sponsored by the bar that would have limited attachments to a flat 10 percent of gross pay and MCMILLAN has reintroduced a similar bill. Also in 1958, the Senate passed a bill which, while setting a sliding scale of attachments based on earnings, flatly exempted the first $50 of weekly income. Both bills were passed so late in the session that a House-Senate compromise could not be worked out.

Backers of the Senate bill contend the flat $50 exemption is both necessary and a more potent caveat venditor. They also argue that the bar bill and the other measure reintroduced in the House by MCMILLAN would take away from the debtor the exemption he can claim now, forcing him to pay 10 percent of his income though he can ill afford it.

Backers of the two House bills center their rebuttal on these points:

1. The present exemption provision, however reasonable it sounds, does not work most of the time in the way Congress intended. (The reasons for this have been explained previously.)

2. A flat-amount exemption leaves no recourse for collection of legitimate debts from a large segment of the population, and payment of debts is a responsibility that all citizens should bear.

3. Garnishment should be continued as a legitimate, last-resort method of collection from deadbeats.

The Senate bill would have forbidden attachment of a nonresident's pay unless he incurred the debt in the District or unless a judgment was rendered against him elsewhere. The two House bills would allow partial attachments of a nonresident's pay if his employer has an office in the District, no matter where he lives, works, or buys.

Some employers object to the procedure in the Bar bill requiring them to forward to the creditor each month a fraction of an attached person's wage until the debt is satisfied. This, they fear, would make their

garnishment-handling costs even greater than at present.

Willey disagrees. His contention is that there would be so many fewer garnishments that overall employer costs would be lower.

Another employer group strongly favors the bar bill. Agreeing with Willey, these employers foresee lower personnel turnover and replacement training costs, fewer demands on executive time, and an end to the nuisance of multiple attachments. At present, many employers fire a man when he has been attached two or more times.

NOT SEEN AS CURE-ALL

The bar does not claim its proopsal is a cure-all. Its position is that it would wipe out intolerabe evis, and that every contingency cannot possiby be provided for.

The bar bill, or a measure like it, is considered to have the best chance of enactment. It has the unanimous support of the District Merchants and Manufacturers Association with its membership of 400 leading retail merchants, and it is expected to have the backing of the District Commissioners.

So far as the municipal court is concerned, Chief Judge Leonard P. Walsh said the major abuses of the court as a collection agency for a few easy credit firms would be ended by the bar bill, by the other bill introduced by MCMILLAN, by the expected Senate bill or by the Dowdy bill.

Other pending garnishment legislation:

The Dowdy bill: Representative JOHN DOWDY, Democrat, of Texas, has reintroduced a measure to prohibit attachment of earnings.

The Curtis bill: Representative THOMAS B. CURTIS, Republican, of Missouri, has reintroduced his bill to permit attachment of the wages of all Federal employees.

The Curtis bill would exempt from attachment $200 earned in a 2-month period by a head of a household and $120 by a single person.

A Farm Program That Would Cost Less—Help Those Who Need It

EXTENSION OF REMARKS
OF
HON. LESTER R. JOHNSON
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 11, 1959

Mr. JOHNSON of Wisconsin. Mr. Speaker, when Secretary Ezra Benson took over the Agriculture Department in 1953, the cost of the farm program was under heavy fire. But during the Truman administration, the total cost of subsidies to farmers never exceeded $1,250 million. On the other hand, Secretary Benson has managed to accumulate $9 billion worth of farm surpluses, which will cost about $1 billion just to store and handle. Under his management, administrative costs in his department have also risen by close to 900 percent. I have just read a column by Joseph Alsop in the Washington Post which brings out these facts. He also reviews the provisions of a farm bill being prepared by four Senators. This bill would cut the cost of subsidies to half the amount requested by Secretary Benson, while giving the assistance to those who need it—our independent, family-type farmers. Under leave to extend my remarks, I would like to include Mr. Alsop's column in the RECORD:

BENSON PROGRAM'S COST IS OUT OF HAND

(By Joseph Alsop)

WASHINGTON.—"Let's not be coming up with our scheme, Herman, until we have had a chance to operate on Ezra."

The maker of this cheerfully bloodthirsty remark was Senator HUBERT HUMPHREY of Minnesota, in council with his new ally, Senator HERMAN TALMADGE, of Georgia. The Ezra destined for the operating table was Secretary of Agriculture Benson. Hatchets will be the instruments employed.

Benson is ripe for the operating table because his farm program has finally got absolutely out of hand. A few comparisons tell the story.

When conservative persons were aroused by the extravagant farm subsidies paid by the Truman spenders, the total cost of the subsidies never passed $1,250 million. The Brannan plan was expected to strangle American agriculture in the embrace of creeping socialism and bankrupt the Treasury in the same breath. But the Brannan plan's total estimated cost was no more than about $2 billion.

In contrast, the conservative, sound-dollar, free enterprise policies of Benson have produced a request for just under $7 billion of agricultural appropriations next year. The $9 billion worth of surpluses the Utah free enterpriser has managed to accumulate will cost about $1 billion in mere storage and handling charges—a larger sum than the spender, Truman, ever paid out to the farmers themselves. Since the spenders were driven out of the Agriculture Department in 1953, administrative costs have also risen by close to 900 percent. And the Utah free enterpriser's bill for farm subsidies next year is in the neighborhood of $4 billion, or about twice the estimated cost of the Brennan plan.

Even the farm State Senators, never before accustomed to be tender in their dealings with the public purse, have begun to be alarmed by this monstrous inflation of the expense of the farm program. So they are not merely preparing to "operate on Ezra"; they are also getting ready a substitute program of their own.

The groundwork is being done by the administrative assistants of Senators TALMADGE, HUMPHREY, SYMINGTON, of Missouri, and PROXMIRE, of Wisconsin. TALMADGE, one of the sharpest intellects in the modern Senate, is the main director and inspirer of the effort. Since the Congress is rarely able to impose brandnew major policies on the executive branch, it is doubtful whether the effort of the four Senators will bear immediate legislative fruit. But even if the bill they are preparing does not pass, it is virtually certain to become the Democratic farm plank in 1960.

Omitting the technicalities, the four-Senator scheme is simple enough. Existing special schemes for tobacco, wool, and other special crops, will be retained. But all other crop controls will be jettisoned, and all the main crops will be sold on the free market, at home and abroad. Subsidies in the form of parity payments will then be given to producers of wheat, cotton, rice, peanuts, corn, and milk. But only on that share of their crop consumed in this country.

If our wheat output is a billion bushels, and America consumes half a billion bushels of this output, a farmer who produces 1,000 bushels of wheat will receive subsidies to bring the price of half his crop up to 100 percent of the sacred and mythical parity price. Special arrangements are provided to liquidate the Utah free enterpriser's staggering surplus stores in a gradual manner. Above all, it is provided that no individual farmer may receive a subsidy payment in excess of $12,500. Mainly because the big farmers are left to shift for themselves, the whole scheme is estimated to cost only about $2 billion at present prices, or half the cost of subsidies requested by Benson.

The scheme's real interest lies in its single-mindedness. It is solely designed to preserve and assist a sorely endangered American asset, our independent farming population. Socially, biologically, historically, this is a name well worth national investment. All previous farm programs, having no limitation on the subsidy check, have instead mainly assisted the big, semi-industrial farmers. This one is shaped to aid only the family sized farm. Whether or not the scheme's machinery is well designed, its principle is surely correct.

Berlin and the Balance of Power

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 3, 1959

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include an editorial by the Assembly of Captive European Nations, dated February 6, 1959, with headquarters in New York City. A letter of transmittal accompanies the editorial.

The letter and editorial follow:

ASSEMBLY OF
CAPTIVE EUROPEAN NATIONS,
New York, N.Y., February 27, 1958.

The Honorable DANIEL J. FLOOD,
House of Representatives,
Washington, D.C.

DEAR SIR: We have read with interest the article by Drew Pearson, on the balance of power, which you inserted in the CONGRESSIONAL RECORD.

Knowing of your interest in this important problem, I take the liberty of enclosing herewith an ACEN editorial on "Berlin and the Balance of Power." The editorial expresses ACEN views on the theory so eagerly advanced by the Kremlin that the balance of power is already tipped in favor of the Soviets.

We would certainly appreciate your comments.

With best regards, I am,
Sincerely yours,
VACLOVAS SIDZIKAUSKAS,
Acting Chairman.

BERLIN AND THE BALANCE OF POWER

An editorial analyzing the situation created by the Soviet-instigated Berlin crisis will appear shortly in the next issue of ACEN News, the monthly review of activities of the Assembly of Captive European Nations. The editorial warns the West to shed its illusion "that ultimate defeat can be staved off by such easy means as cultural exchanges, economic assistance, and the power of example. The West must learn fast that in the political war that is raging now its main problem is not to demonstrate that it is right, but that it has a strong purpose and will, and the determination to win." The full text reads:

"The most recent actions of the Soviet Union, particularly their challenge to the West on Berlin and Germany, and the statements made in recent days at the 21st Congress of the Communist Party, clearly indicate that the Soviet rulers want the world to believe that the balance of power is now tilted in their favor. They are out to persuade the Western Powers that unless they bow to the Soviet demands expressed in quasi-ultimative terms—they will be phys-

ically forced out of Berlin first and Western Germany next. It is obvious that the Soviet rulers would like to world to believe that American power of nuclear retaliation—the basic element of Western European defense—has already been neutralized. The inference is that the Western Powers can no longer risk an all-out war—which, given their inadequate conventional forces, remains the only way in which they could attempt to maintain themselves in Berlin and in Germany. This was quite pointedly expressed on January 29 by Soviet Foreign Minister Andrei Gromyko before the 21st Party Congress in Moscow. 'The growing might of the Soviet Union and the countries of the Socialist camp makes it risky and even impossible to unleash a new world war.'

"Here we have the most significant illustration of the Soviet use of the balance of power concept in order to further their ends painlessly, by classical cold war methods. For the Soviet claim that the balance of power is already tipped in their favor can, at best, be called premature. As they have done so often in the past, the Soviets exploit their future achievements in advance and, because of the secrecy in which they can veil their actions, frequently succeed in getting the outside world to credit them with strength which sometimes is still in the drawing board stage.

"Our point is that in spite of these Soviet claims, the balance of power still favors the West. However, unless western military and political policy is radically invigorated now, the advantage will be lost within the next few years. From then on the balance of power will tilt increasingly in favor of the Soviet Union—to the point where the Soviets, and their Chinese partners, might succeed in gradually gaining control over the whole Eurasian landmass without war, by a combination of lures, pressures and blackmail.

"To understand the tremendous problems with which the free world is confronted today, we must remember that, as a result of World War II, only two important power centers were left in the world: the United States and the Soviet Union. We must further bear in mind that, because of a purely military, nonpolitical approach to warfare on the part of the United States, because of insufficient understanding of Communist aims and methods and because of the premature disarmament of the West, the Soviet Union succeeded in gaining control over the eastern half of the European Continent and, eventually, in carrying communism to power in China. Only insular positions and fringes of the Continents of Europe and Asia escaped Soviet control. Despite many praiseworthy efforts, these fringes never succeeded in placing their defense on a self-supporting basis to any substantial degree. Confronted with the powerful conventional military machine of the Soviet Union, poised in a central position, and enjoying the advantages of a landmass, the free nations of the European and Asian fringes succeeded in conserving their freedom only because of the protective umbrella which American power has extended over them. This protective umbrella consisted almost exclusively of the American power of nuclear retaliation and its deterrent effect.

"It should have been obvious to the free nations that this source of their security was bound one day to dry up. Sooner or later the Soviets would develop a nuclear striking power sufficient to neutralize the American power of nuclear retaliation, and then the Soviet Union would be able, at small risk, to use its vastly superior conventional power to pressure the European and Asian fringe countries into submission.

"Still, the free nations of Europe and Asia acted as if the American nuclear umbrella would protect them forever. They did not take advantage of the time this protection afforded them to build up adequate local forces would counterbalance the nonnuclear striking power of the Soviets. And during the period of American nuclear supremacy, they failed to roll back Soviet power by the joint pressures of internal and external forces. Basking in their newly found prosperity and, more recently, in the comfort of improved internal political conditions, they took their security for granted, and continue to do so.

"It must be stressed that, in order to upset the balance of power, the Soviet Union does not need to outstrip the United States in technology or in nonconventional military power. All they need do is to develop their nuclear striking capability to the point necessary to blow up all essential American targets. The obvious reasoning of the Soviet rulers is that, once they have this capability, it will become too costly for the United States to rescue its allies by the only effective means at its disposal: nuclear retaliation. American nonconventional power will be neutralized, and, once this main deterrent is nullified, conventional power will be too weak to save any ally. Once this dawns upon the allies of the United States they will be ripe for a gradual take-over by political means.

"By its Berlin challenge the Soviet Union would like to suggest that the neutralization of American striking power is already a fact. For this purpose what is really a probing operation is represented as a deliberate showdown. The hope of Moscow seems to be that if it acts with determination and is prepared to go as far as some local shooting, the United States and its allies will realize that they can maintain themselves in Berlin only at the price of an all-out war. Moscow calculates that the West will shy away from this. A compromise, embodying the Soviet terms and some face-saving features would end the incident. The main Soviet purpose would have been achieved: to prove to the nations of Europe and Asia that they can no longer depend on American power, and to thereby pave the way for their step-by-step surrender—via various neutrality and disengagement schemes.

"This is why Berlin has become a transcendental issue. Not the fate of a city, not even of a country or a continent, but the whole future of freedom is at stake. Hence the decision of the Western governments to stand on their rights at whatever risk. It is our strong conviction that this firmness is the only way to prevent the disintegration of the Western camp, with all its inevitable consequences in Europe, Asia, and the Middle East. But none should delude himself with the thought that a firm stand now will solve the problem of the balance of power for good. Time will continue to work for the Soviets unless revolutionary changes take place in the thinking and the actions of the West.

"The West must shed the illusion that ultimate defeat can be staved off by such easy means as cultural exchanges, economic assistance, and the power of example. The West must learn fast that in the political war that is raging now its main problem is not to demonstrate that it is right, but that it has a strong purpose and will, and the determination to win. It must learn how to avoid the trap of Soviet softening devices calculated to prepare the mood for more western flexibility—that is, surrender—or for such invitations to complacency as the idea that evolution of the Communist regimes toward freedom and imaginary Soviet-Chinese antagonism will in time solve all problems.

"The West must realize that the time to look to its salvation is today, not tomorrow, and that this requires an unprecedented all-out effort to build local strength in Europe and Asia; an all-out attack on the causes of the coming imbalance of power; an all-out effort of political warfare behind the Soviet lines. For instance, the drive for communes in Red China has created revolutionary conditions which beg to be turned to the advantage of the worldwide cause of freedom.

"The question is: Will the West ever learn to measure risk taking not only in terms of the peril involved but also in terms of opportunity to escape the dire alternatives of war or surrender."

Growing Popular Support for Economy in Government

EXTENSION OF REMARKS
OF
HON. JOHN W. BYRNES
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 26, 1959

Mr. BYRNES of Wisconsin. Mr. Speaker, since the President announced his balanced budget, I have received hundreds of letters approving the President's determination to fight inflation and reckless Government spending.

Representatives of 23 taxpayer groups in Wisconsin held a conference in the city of Fond du Lac on February 18 and adopted the following resolutions which I would like to insert as an example of the growing popular support for economy in Government:

FEDERAL BUDGET

Whereas in what is generally one of the most prosperous eras in our country's history there seems to be no valid reason why the Government should not be able to pay its own way; and

Whereas a balanced Federal budget for the 1960 fiscal year has been proposed by President Eisenhower; and

Whereas a balanced budget can put a halt to the inflationary trend which is reducing the purchasing power of the dollar; and

Whereas a balanced budget should also lead to reducing the Federal debt; and

Whereas the proposed 1960 Federal budget calls for strengthened fiscal controls which can lead to continuing balanced Federal spending programs; and

Whereas the budget proposes a decrease in Federal participation in areas of State and local responsibility: Now, therefore, be it

Resolved, That this conference of taxpayers' associations in the interest of better and lower-cost Government with control maintained closer to the people, does hereby urge the Congress of the United States to reduce Federal spending, pass a Federal budget that is balanced, and support efforts to reduce Federal financial participation in activities of the State and local governments; and be it further

Resolved, That the Wisconsin Members of the U.S. Congress be urged particularly to work unceasingly for these objectives.

(Adopted, Fond du Lac, Wis., February 18, 1959.)

FEDERAL AID TO EDUCATION

Whereas repeated attempts to inject the National Government into the financing of public education have been made over the past few years and efforts in that direction again are being urged before Congress in the form of bills to subsidize teachers' salaries and the construction of school buildings; and

Whereas the States in general, and Wisconsin in particular, have sufficient resources to

pay both for the construction of new school buildings and adequately compensate the teachers; and

Whereas the State of Wisconsin has, for example, using its own tax resources, increased its school spending since 1946 by 225 percent while enrollments have increased only 29 percent, and increased the portion of individual personal income spent on education from 2.20 to 3.58 percent during this same period; and

Whereas Federal reports show Wisconsin has done the best job in the Nation in providing school buildings as evidenced by the fact that 44 percent of the 1956–57 school enrollment could be placed in classrooms built since 1951 and has increased local debt for school purposes to provide these classrooms from $10.3 million in 1947 to $235.9 million in 1957; and

Whereas the field of public education has been traditionally a responsibility of the State and local governments and Federal participation or control is neither needed nor desired: Now, therefore, be it

Resolved, That the taxpayer associations jointly assembled in Fond du Lac on February 18, 1959, do make known their opposition to Federal financial aid to the public schools and do further resolve to oppose all such proposals to the maximum extent possible.

(Adopted Fond du Lac, Wis., February 18, 1959.)

Signers of resolutions: W. B. Wigton, Taxpayers Association of Fond du Lac; Robert Jenkins, Portage County Taxpayers Association; Walter G. Rose, La Crosse County Taxpayers Association; Robert K. Steele, Kenosha Taxpayers, Inc.; L. E. Plettner, Brown County Tax Survey; Herbert W. Clark, Racine Taxpayers Association; John W. Thorne, Waupaca County Taxpayers Association; R. S. Washburn, Beloit Taxpayers League; J. P. Duskey, Wausau Taxpayers League; Kenneth E. Pinkerton, Waupaca County Taxpayers Association; Jacob S. Disch, Green County Governmental Affairs Committee; Wesley M. Kolbe, Appleton Taxpayers Association; Elmer C. Dickerson, Sheboygan County Taxpayers Association; Donald A. Johnson, Clark County Taxpayers Association; J. C. Batzner, Winnebago County Taxpayers; D. H. Wischer, Northwest Taxpayers League of Milwaukee; H. A. Haberstroh, Southwest Taxpayers League of Milwaukee; Louis Hess, Oak Creek Property Owners' Association; Gilbert T. Backes, South Milwaukee Taxpayers League; Wm. C. Dietrich, Beaver Dam Committee on Governmental Affairs; Robert J. Cunningham, North Shore Tax Association; S. O. Donkle, Jefferson County Taxpayers Association; George DeBruin, Janesville Taxpayers League.

Tax Relief for Retirement Plans for the Self-Employed

EXTENSION OF REMARKS
OF
HON. KEN HECHLER
OF WEST VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 3, 1959

Mr. HECHLER. Mr. Speaker, one of the most cherished principles of constitutional government is equality under the law. As Members of Congress we have a special responsibility to see that the legislation which appears on the statute books affords equal treatment to all classes of people in America. Today I would like to raise my voice in support of legislation which is intended to achieve greater equality of tax treatment for those of the self-employed in this country who have the wisdom and the initiative to plan for their retirement years.

I refer, of course, to H.R. 10, introduced by our distinguished colleague from New York, the Honorable EUGENE KEOGH, which was recently reported out of the Ways and Means Committee. This measure was passed overwhelmingly by this body last session but died in the Senate Finance Committee. I wish to congratulate the Ways and Means Committee for their speedy handling of the bill this session. The Congress over the years has studied the Keogh-Simpson-Reed-Jenkins bills with a thoroughness which can be matched by its consideration of very few legislative proposals.

The purpose of H.R. 10 is to reduce the inequity of tax treatment between employees under qualified pension plans and the self-employed. Under pension arrangements which meet the requirements of the Internal Revenue Code, an employee is not taxed on the amount of the retirement contribution paid on his behalf until his retirement benefit is actually paid. This means, in most instances, that this amount will be taxable to the employee at a time when his income is much lower, because he has retired, than it was when the contribution was paid during his working life. Moreover, the employer can deduct the amount of this contribution to the employee's pension as a part of his cost of doing business. The self-employed individual, on the other hand, can get no deductions for the annuity contracts he purchases or the retirement investments he makes and his income is fully taxed at the time of his highest earnings.

H.R. 10 would modify this discriminatory situation by allowing self-employed individuals to take a tax deduction for a limited amount of investment in certain types of retirement annuities, or retirement trusts. The bill would make this deduction available to all self-employed individuals who fall within the meaning of this term as it is defined under the Social Security Act. It would also include doctors and certain ministers who are not self-employed for social-security coverage purposes. The allowable tax deduction would generally be limited to 10 percent of earnings with a deduction ceiling of $2,500 for a year and $50,000 for a lifetime. So that older persons who would have to build up their retirement plans within a shorter period of time would not be disadvantaged, the bill provides that the annual deduction ceiling could be higher for persons over 50 years of age on January 1, 1959.

The deductions would not be applicable to just any annuity contract or retirement trust fund. The annuity policy would have to provide for the starting of payments not later than the time the individual reaches the age of 70, the policy would have to be nonassignable, and if the policy includes a life insurance provision the premium on this portion could not be used for deduction purposes. Similar restrictions are put on the retirement funds authorized under the act. Amounts received by the individual from restricted retirement funds or policies will generally be treated as ordinary taxable income at the time they are received during his retirement years.

To prevent a person from withdrawing the funds invested under one of these restricted plans before the age of 65, a penalty provision is incorporated which, in most cases, would provide that the withdrawals would be taxed at 110 percent of the liability otherwise resulting from including such sums as taxable income.

The legislation presented has been accepted by a substantial segment of the English-speaking world. Great Britain's law on this subject in 1956 was based on the distinguished white paper of the Committee on the Taxation Treatment of Provisions for Retirement headed by Sir James Millard Tucker. Canada followed with legislation in 1957 and the proposal has been under active consideration in Australia and New Zealand. The bill in this country has undergone many revisions and the product we have here today has been modified to answer many of the objections that have previously been raised.

Most of the revisions that have been incorporated into the legislation since it was first considered by the 82d Congress in 1951 have been aimed at reducing the loss of tax revenue by the Federal Government if the bill is enacted. The present administration, although admitting "that the present law does not give self-employed people tax treatment for their retirement savings comparable to that now accorded to employees covered by employer-financed plans," nevertheless has felt compelled to oppose this bill at this time because of the revenue loss. The Treasury Department in its report has estimated that the revenue loss for fiscal 1960 would be $320 million and for the first full year of operation, $365 million.

Testimony before the Ways and Means Committee, however, has questioned the validity of some aspects of the Treasury Department estimate. For instance, some individuals who have studied the provision, believe that the revenue loss would be less than one half the Treasury estimate for the first full year of operation. These people maintain that the experience of Canada and Great Britain has been that the use of the deduction has started on a small scale and has grown slowly.

The fact that there will be revenue loss is axiomatic, of course, with a bill that affords tax relief. I think one is entitled to ask, however, whether this aspect alone can justify the further postponement of this legislation. The equities, in my view, are controlling in this situation and, therefore I urge the passage of H.R. 10 at the earliest opportunity.

New Tax Loophole

EXTENSION OF REMARKS
OF
HON. ELMER J. HOLLAND
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Monday, February 2, 1959

Mr. HOLLAND. Mr. Speaker, I think the article of February 26, 1959, from

the Pittsburgh Press, by Jack Steele, entitled "House Ready To O. K. New Tax Loophole," should be brought to the attention of every Congressman.

This contemplated tax legislation would only create new loopholes for people to avoid paying taxes and would serve as a means for other professionals and those not covered by social security to come in and ask for the same thing:

HOUSE READY TO OK NEW TAX LOOPHOLE—DOCTORS, LAWYERS, PROFESSIONALS WOULD BENEFIT IF BILL IS APPROVED

(By Jack Steele)

WASHINGTON, February 26.—A bill which would open a new loophole in the tax laws and give substantial tax benefits to doctors, lawyers, dentists, and a few businessmen is expected to sail through the House soon.

The measure—reported to the House yesterday by the House Ways and Means Committee—would permit this select group of self-employed taxpayers to avoid paying taxes on up to $2,500 a year they put aside in retirement funds.

But it would grant no similar tax benefits to some 30 million other taxpayers who are employees and who are not covered by pension or retirement plans.

IN HIGH-INCOME BRACKETS

The self-employed taxpayers who would get special tax advantages under this bill are largely in the middle and upper income brackets. Doctors and lawyers have led in the intensive lobbying for the measure.

The average net—or taxable—income of the Nation's doctors is estimated at more than $18,000 a year. The Department of Commerce estimates that the average net income of all self-employed professional and technical workers in 1956 was $10,490.

The Bureau of Labor Statistics has reported that increases in the fees of doctors and dentists in the last decade have materially raised the cost of living. Since 1949, doctors have increased their fees 37.5 percent and dentists 32.5 percent, while the cost of living generally has gone up 27.5 percent.

Physicians are one of the few self-employed groups which have refused to participate in the social security program.

TREASURY OPPOSES IT

The Treasury, which is opposed to the retirement-income bill, estimates that it would save these taxpayers $365 million in its first year of operation. This revenue loss to the Government would insure an unbalanced budget for fiscal 1960.

The Treasury also estimates that if the same tax break was given all taxpayers—as it probably will be eventually if this bill is enacted—the annual revenue loss would run to $3 billion a year.

The bill, formerly known as the Jenkins-Keogh bill, cleared the House last year, but died in the session-end logjam in the Senate. It is jointly sponsored this year by Representatives EUGENE J. KEOGH, New York Democrat, and RICHARD M. SIMPSON, Huntington, Pa., Republican.

The bill, by granting a new special tax exemption, runs counter to the avowed aim of Democratic leaders to close loopholes in the revenue code.

THREE HUNDRED AND FIFTY VOTES LINED UP

But its sponsors reportedly have lined up at least 350 votes in the House—including those of many Democrats—to insure its passage.

The bill's enactment would more than wipe out the additional revenues provided by a bill increasing the tax on life insurance companies by 70 percent which cleared the House last week.

The major reason advanced for the retirement income bill is that it would give the self-employed equality with employees who are covered by pension, profit-sharing, or stock-bonus plans.

But the Keogh-Simpson bill would grant a similar benefit only to the self-employed without extending it to others who are not covered by pension plans.

For Humanity's Sake—Faith in the U.N.

EXTENSION OF REMARKS
OF
HON. JOHN D. DINGELL
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 3, 1959

Mr. DINGELL. Mr. Speaker, pursuant to permission granted I am inserting into the Appendix of the CONGRESSIONAL RECORD an editorial appearing in the Detroit, Mich., Jewish News of January 30, 1959, by its distinguished author and publisher, Mr. Philip Slomovitz.

The editorial does much to make clear what could and should be done for a solution of the problem of the Arab refugees which is now being used by Arabs for political purposes:

"FOR HUMANITY'S SAKE"—FAITH IN THE U.N.

Defying logic and reality, Israel's enemies appear determined to utilize the tragic position of the Arab refugees to such an extent that it should serve to undermine Israel's none-too-secure position.

Regrettably, United Nations Secretary-General Dag Hammarskjold appears to be in so helpless a position that, in his report on his recent Middle Eastern trip, he stated that Arab-Israel tensions remain serious due, in part, to Israel's refusal to cooperate with U.N. armistice machinery. His opinion of Israel-Arab relations was described as "somber" and while he said there is a "will to peace," he stated:

"I am sorry to note that the armistice agreements and armistice machinery are just as much under a cloud as they have been in the past few years. The mixed armistice commissions are not functioning in the way they should function. One of the parties (Israel) does not participate, and there are also other elements which are unsatisfactory in the picture."

Why is Israel not cooperating with some of the U.N. commissions? The U.N. Secretary General could not offer explanations, and he probably would not, as it would have opened up another controversy. But there were occasions when mixed armistice commission decisions were so prejudicial to Israel that it would have been suicidal to continue to cooperate with biased functionaries. On at least two occasions, Commission members returned to their countries and wrote books in which they revealed their antagonism to Israel. Under such conditions, the Israelis felt compelled to withdraw.

"There are also other elements which are unsatisfactory in the picture," Hammarskjold said. Of course there are such elements. Israel had offered a plan of action to solve the Arab refugee problem, which is the major stumbling block to peace and cooperation. But the Arabs are adamant in their determination to use the refugees as a weapon against Israel, and they therefore refuse to abandon the weapon by solving the refugees' plight.

In an editorial on "Mr. Hammarskjold's Travels," the New York Times indicated that "what is mainly wrong in a large general way, as everybody knows, is that the Arab states have not yet accepted the continued existence of Israel, and that in spite of the U.N. emergency force some border troubles still occur." The Times editorial proceeded to state:

"A solution might be had if the problem of some 900,000 Arab refugees could be equitably solved. Israel has promised to take back a few of these refugees and to compensate those of the remainder who once had land in what is now Israeli territory. Since half of the refugees are under 16 years of age, it is clear that many of them never lived in Israel, or lived there only as very young children. But the Arabs have rejected an Israeli offer made at last fall's session of the General Assembly. The refugees continue to need aid from the U.N. Relief and Works Agency for Palestine. They subsist on a total of about $25 a year per capita, of which we pay about 70 percent, Britain about 20 percent, and Russia nothing.

"The UNRWA's mandate expires in 1960. The United States is on record in favor of some more satisfactory means of dealing with the refugee problem than the mere continuance of the present system. Our spokesmen have not spelled out what they really mean.

"It is Mr. Hammarskjold's exacting task to come up with some proposal, or some new facts, that will not irritate anybody concerned. For humanity's sake we must wish him luck."

The wish "for humanity's sake" should be shared by all responsible people. But there are too many irresponsible elements standing in the way of peace and genuine cooperation to assure a speedy solution in the Middle Eastern problem. On top of it, to refer again to the New York Times editorial, "our spokesmen have not spelled out what they really mean."

Instead of improving, the situation appears to be getting worse. Its aggravation has made Mr. Hammarskjold's position more difficult. It is to be hoped that faith placed in the U.N. and in the leaders among its members will not prove fruitless—for humanity sake.

Madison County, Ark., Rural Development

EXTENSION OF REMARKS
OF
HON. JAMES W. TRIMBLE
OF ARKANSAS
IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 3, 1959

Mr. TRIMBLE. Mr. Speaker, the youth of this Nation are its greatest asset. We hear this statement repeated often. Unfortunately, it is not always accompanied by concrete recommendations to assist our youth in realizing their great potential.

For this reason, I take great pride in calling the attention of my colleagues to the work of a group in Madison County, in the district which I am honored to represent. They know that their young people are their county's greatest resource. But they have gone one step further and are doing something positive and effective about it.

Madison County is participating in the Arkansas rural development program. Soon after organization of the work, a committee on youth opportunities was formed to develop and spearhead new programs that would serve young people.

The group faced formidable problems. There were few, if any, opportunities for

training in industrial skills; a large number of school dropouts; and lack of supervised entertainment, among other problems.

In the face of many obstacles, the Madison County Youth Committee moved forward. Working with such agencies as the extension service, school board, and county government, they prepared a detailed, long-range plan of operation. Some of their objectives, I am happy to report, have already been reached after only a few short months of operation. A pilot program of career counseling was introduced in the schools. A youth center has been established in the county. Job development for young people has become a countywide campaign.

I congratulate the people of Madison County on their determination to help young people in the area meet the challenges of the future. Under leave to extend my remarks in the RECORD, I include the plan prepared by the youth committee in the county:

OPPORTUNITIES FOR YOUTH, MADISON COUNTY, ARK.

This program is being developed by the Madison County Rural Development subcommittee on youth opportunities. Its purpose is to serve as a guide in initiating greater opportunities for the youth of Madison County.

SITUATION

Madison County is completely rural with approximately 70 percent of its area in forest land. There are approximately 9,000 people in the county, and approximately one-third of these are under 20 years of age. The major source of income is from agriculture, in which the opportunities for young people are rather limited.

Madison County has three high schools. Two of the schools offer vocational agriculture and home economics training. One offers some special work in chemistry and one offers trades and industry training. All three high schools offer courses in typing and shorthand.

Approximately 110 students graduate from high school each year. Approximately 85 percent of these leave the county and 45 percent leave the State after graduation. Of the approximate 200 students that enter the first grade, 40 percent drop out before graduating from high school. There is no record of where the dropouts go to or what they are doing for employment and use of their time. All indications point to the fact that most of these leave the county for employment after they have reached the age for employment.

In connection with the use of leisure time or recreation and entertainment phase of this program, the opportunities for fishing and outings are good. Play grounds, including ball parks, tennis courts, golf courses, etc. are rather limited or nonexistant. No amusement parks are available. No up-to-date swimming holes are available. No supervised recreation and entertainment for the youth is available. Movies are available three times weekly. There are no recreation facilities for private clubs or groups.

Far too few high school graduates attend higher educational institutions.

PROBLEMS

1. Need of supervised recreation and entertainment.
2. Need for a safe and sanitary swimming hole.
3. Need for organized intramural sports, with competition between classes and schools during school terms.
4. Need for organized sports activities.
5. Need for training young people in trades and industry.
6. Need for counseling in the high schools.
7. Need for career days in the high schools.
8. Need for creating atmosphere to make the youth want to be counseled and guided.
9. Need for listing graduates according to their capabilities with the employment office.
10. Need for more youth to take advantage of FFA, FHA, 4-H, and Boy and Girl Scout work.
11. Need for creating more jobs and employing more young people locally.
12. Need for more high school graduates to take advantage of higher educational institutions.

OBJECTIVES

The youth of today are the citizens of tomorrow. The future of Madison County is dependent on its youth. It is all important that we (1) create situations whereby the youth can be developed into strong young men and women to shoulder responsibility of the county for the future; (2) help them to help themselves; (3) lead the youth to take the right road for a better chance of happiness and financial security; (4) help the youth to make a life as well as to make a living.

GOALS

1. To establish a youth center.
2. Create intramural sport competition between classes and between schools.
3. Develop the sidewalk swimming hole.
4. Establish career sections in each high school library.
5. To have career days in each high school.
6. List high school graduates according to capabilities with employment agencies.
7. Establish counseling services in the high schools.
8. Double the number of graduates attending higher educational institutions.
9. Encourage job opportunities for youth in the county that keeps them in county.
10. Make it convenient for the youth to take advantage of trades and industry training.
11. Conduct first aid and swimming classes. (Including water safety.)

WORK PLAN

This program involves the Agricultural Extension Service; the public school, and particularly the vocational agriculture and home economics departments in the high schools; PTA; the churches; the county and city government; local, civic, and social, and service organizations; the county rural development committee and particularly the youth opportunities subcommittee and education subcommittee.

Primary responsibility for planning and carrying out the program will be at the county level by the rural development subcommittee on youth opportunities. Representatives of all agencies and organizations in the county, State, and on the Federal level, will upon request, provide advisory service, help develop plans, and give on-the-ground assistance when necessary.

1. The subcommittee will meet when necessary to make plans to carry out each goal that is listed.
2. Members of the committee will be assigned to various tasks in working out these plans.
3. Contacts will be made with possible sponsoring agencies in the county.
4. Trips will be made to observe ways and means of carrying out various projects.
5. Information for establishing career libraries will be sought through various Government departments, insurance companies, as well as business and manufacturing companies.
6. Encouragement will be given to setting up counseling services in the schools.
7. Contacts will be made with national organizations such as the National Recreation Association, American Campers Association, and civic organizations in seeking guidance information.
8. Contacts will be made through the county, State rural development committee, etc. in an attempt to get a trade school established for the convenience of Madison County youth.
9. Encouragement will be given to all youth to take advantage of 4-H, FFA, FHA, and scout work.
10. Schools will be encouraged to list graduates according to capabilities with the employment service.
11. Encouragement will be given to the youth to attend higher educational institutions.
12. Seek means of financing youth by loan or scholarship to do higher education.

ACCOMPLISHMENTS

1. Conducted youth opportunities survey.
2. Established Madison County Youth Center.
3. Established career sections in the three high school libraries.
4. Completed water safety class of 25 students.
5. Started counseling on small scale in two high schools.

Labor, Management—Both Must Fight Unemployment

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 3, 1959

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include a very interesting article which appeared in the Boston Pilot on February 28, 1959:

LABOR, MANAGEMENT—BOTH MUST FIGHT UNEMPLOYMENT

(By Msgr. George G. Higgins)

The U.S. Government officially reported that unemployment rose to 4,724,000 during the month of January, an increase of 616,000 over December and the largest January total since 1941.

George Meany, president of the AFL-CIO, issued a public statement on these official unemployment statistics. He pointed out that the January total of 4,724,000 "indicates clearly that joblessness is still America's No. 1 problem, in spite of other signs that we are pulling out of this recession," and warned, in conclusion, "that the persistence and seriousness of the unemployment situation cannot take a back seat to any other issue."

Columnist David Lawrence also commented on the subject of unemployment. In the opening paragraph of his syndicated column for February 10, Mr. Lawrence said "that the paradox of continuing unemployment on a large scale during a period of steadily progressing recovery is something that should begin to worry the labor leaders of America. It already has produced anxiety among many businessmen."

On the face of it, this statement would seem to mean that, in Mr. Lawrence's opinion, labor leaders (in contrast to many businessmen) are not at all worried about unemployment. Frankly, however, I seriously doubt that that is what Mr. Lawrence really intended to say, for it is perfectly obvious to anyone who even casually scans the headlines of the daily press that labor leaders, by and large, have been seriously worried about unemployment for many months.

I take it, then, that what Mr. Lawrence really meant to say in the opening paragraph of his column for February 10 was not that labor leaders are unconcerned about unemployment, but rather that they are unwilling to admit that they and they alone are responsible for unemployment.

"The latest figures show," Mr. Lawrence wrote, "that perhaps labor is pricing itself out of the market and that laborsaving machinery is being forced on industry at an unprecedented rate." This, then, is the problem—the problem of labor's alleged responsibility for unemployment—about which labor leaders, in the opinion of Mr. Lawrence, "should begin to worry."

Mr. Lawrence has a good point there, as far as it goes, but I wonder if it really goes far enough. He is definitely on the side of the angels when he says that labor leaders ought to be concerned about the impact of their wage decisions on employment levels, but he should have hastened to add that businessmen ought to be equally concerned about the impact of their price and profit decisions on the economy as a whole.

The chances are that management and labor are more or less equally worried about unemployment. Moreover, it is clear that they are mutual partners in a common enterprise and that they share a great number of interrelated problems and responsibilities. The trouble is, however, that they have no way of getting together at the present time even to discuss these mutual problems and responsibilities.

It seems to me that instead of pinning the blame for unemployment and/or inflation on either labor or management, all of us, including Mr. Lawrence, would be better advised to encourage them to come together periodically in a national labor management assembly for the express purpose of solving (instead of merely worrying about) the problems of unemployment and inflation and the many related problems for which they are, to a large extent, jointly responsible and which they must somehow or other jointly resolve.

The Late Representative Daniel A. Reed Who Served Our Nation Long and Faithfully

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 3, 1959

Mr. LANE. Mr. Speaker, Representative Daniel A. Reed was a direct descendant of John and Priscilla Alden.

In everything that he said or did, he lived up to this inspiring heritage.

He was independent, courageous, and possessed of an integrity that was eternal.

His constituents had a high regard for his ability and his conscience. From the time he was first elected to Congress in 1918, he served continuously over a period of 40 years until death terminated his career at the age of 83.

As the dean of the Republican membership in this House, and as an outstanding expert in the complex and difficult field of taxation, he had established a reputation as guardian of the public purse that won the respect of all his colleagues.

There were times when his opinions represented the minority viewpoint within his own party, but even then, no one dared to contest Dan Reed on the facts. With his encyclopedic knowledge as a veteran member of the Ways and Means Committee, he was more than a match for any Representative who had only given 10 or 20 or 30 years of intensive study to the subject that Dan knew inside and out.

We shall always treasure the memory of his patriotism that was summed up during the debate on his bill to increase tariff protection for those American industries in need of it. In reply to an opponent of his bill, he said: "As long as I stand on the floor of Congress, I shall fight for my own country first, last and always."

That he did, with sincerity and wholehearted devotion during his long and honorable career, and right up to the end.

To his widow, Georgia, to his son, William T., and to his grandchild and to his great grandchildren, we extend our sympathy.

He has bequeated to them the greatest heritage of all, because Representative Daniel Alden Reed gave his best in the service of the United States and its people.

Women's Role in Advancing the Ideals of Brotherhood

EXTENSION OF REMARKS
OF
HON. KATHRYN E. GRANAHAN
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 3, 1959

Mrs. GRANAHAN. Mr. Speaker, on Thursday, February 19, 1959, at the 30th Anniversary Brotherhood Dinner of the National Conference of Christians and Jews, held in Washington, D.C., Mrs. Henry Grattan Doyle was presented the conference's brotherhood award for outstanding achievement.

Mrs. Doyle, the wife of Dean Doyle, is one of the truly great citizens of our Nation's Capital and of our country. She has devoted her life to the advancement of all that is good in our society, promoting mutual understanding and helping to make the Nation's Capital a better community, a better neighborhood, and a better place in which the Nation's Government can conduct its role of national guidance and leadership.

It was most fitting that the audience of over 1,000 persons who gathered to witness the presentation of the conference's brotherhood award to Mrs. Doyle included Members of Congress, the Supreme Court, the President's Cabinet, Ambassadors, and other representatives of many foreign nations, and numerous leaders of our country in many walks of life.

Mrs. Doyle accepted the conference's brotherhood award with the characteristic humility of one who is truly elevated in spirit. She expressed her feeling that the many tributes to her are colored with generosity, and even with charity, and said that she accepted the award as a symbol of what women have achieved and can achieve in advancing the ideals of brotherhood.

Her brief remarks on the special role of women in advancing these ideals were Lincolnesque in their simplicity, felicity of expression, and perception. I was deeply moved by her emphasis on women's opportunities in teaching children the meaning of human dignity, and in exemplifying the spirit of sympathy and understanding, patience, steadfastness, and prayer. I believe they will be of interest to every Member of Congress and other readers of the CONGRESSIONAL RECORD, and I, therefore, request unanimous consent to insert her remarks at this point in the RECORD:

REMARKS OF MRS. HENRY GRATTAN DOYLE IN ACCEPTING THE BROTHERHOOD AWARD OF THE NATIONAL CONFERENCE OF CHRISTIANS AND JEWS IN WASHINGTON, D.C., ON FEBRUARY 19, 1959

What are the special ways in which women can help to advance understanding among the religions, races, and cultures of the world? There two, I think.

First, in teaching little children. Women, as mothers and teachers of the very small child, have practically exclusive jurisdiction in this field. Children are born without prejudices, as we all know, but to keep them that way is something else again. This is a constant everyday task, not accomplished by lessons, but rather through creating an atmosphere in the home or nursery school where the common denominators of love, laughter, play, and comradeship are emphasized.

Whether rich or poor, whether quick or not so quick, whether black or white, whether Christian or Jew, each little one has his dignity, and at the first sign of belittlement, for any reason, a woman, mother or teacher, has the opportunity to say just the right word, and just when it is needed.

And how we must keep at it. Our actions, our words, our attitudes with little children will help them to remain on the broad highway of tolerance, rather than to lose their way in the mean, narrow, murky, byways of intolerance.

Second, we women can, I think, make a contribution to brotherhood by our example as women. From babyhood we women have been told that we must always give a good example. Human frailty being what it is, we don't always do so. But within us all, I think, is a feeling of responsibility to do our part in our own way to help our fellow man by exemplifying the characteristics that are usually identified with womanliness. Among these, I would include:

(a) Sympathy and understanding: Women have made their greatest contributions in the teaching and nursing professions, both of which call for understanding and sympathy in a high degree. We, as women, can strive always to understand those who seem different, who look different, whose background is different, and in our own way get through the barriers of religion or nationality. We can try, too, to understand those who today resist social change. The human wall of resistance to social improvement must have many chinks and already some rays of understanding seem to be filtering through.

(b) Patience: We must have patience and not despair as we watch the slow and stumbling feet of progress. We women know full well how slow any social change is, as we tread our way toward professional achievement in this world—which is still a man's

world in spite of the nearly 40 years that have elapsed since the passage of the 19th amendment to the Constitution granting women the right to vote.

(c) Steadfastness is a thoughtful approach to the goal of brotherhood, not to be swayed by hysteria or panic. We have all been revolted by pictures in the papers or on television that have shown the faces of men and women distorted by snarling hatred just because they were looking at human beings of another race or religion. It is bad enough to see the face of a man so marked with unreasoning hatred, but a woman's face twisted into loathing because of her deep-seated intolerance seems to me to be a degradation of the human race.

(d) Prayer: My own conviction is that brotherhood will be achieved through the efforts of individuals who are morally and spiritually motivated. Because I believe this, I believe that every woman in her own way should consciously pray for understanding among peoples.

We women have learned the comfort of prayer in our moments of loneliness: having a baby is a lonely business, even with a devoted husband close by; a sick baby at night is terrifyingly lonely; and the traditional loneliness of women when their loved ones are at war has always inspired them to ask for help from God.

In all humility, then, I accept this award as a tribute to women's efforts toward brotherhood. I hope that by our guidance of small children; by understanding, by patience, by example, by prayer, we, as women, can help push this turbulent world of ours a little further onward toward God's precept: "Love thy neighbor as thyself."

Russia's Hostility Toward Israel

EXTENSION OF REMARKS
OF
HON. JOHN D. DINGELL
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 3, 1959

Mr. DINGELL. Mr. Speaker, the Detroit, Mich., Jewish News of December 19, 1958, carried an article by its distinguished editor and publisher, Mr. Philip Slomovitz, entitled "Russia's Hostility Toward Israel."

That excellent article chronicled how the Russian Communist dictatorship is no different in its attitude toward Jews and minority groups than was the vicious anti-semitism practiced by the Nazis under Hitler.

I think the insight into this matter is well worth consideration and will help thinking Americans to realize the real nature of the enemy all freemen face:

RUSSIA'S HOSTILITY TOWARD ISRAEL

Multiplication of tensions between East and West continues to throw additional light on the sad status of Russian Jewry and on the increasing unfriendliness on the part of the Communist rulers toward Israel and the Jewish state's supporters.

One of the latest manifestations of hostility on the part of Russia is contained in a new Soviet-published book, by two authors, one of them Jewish, under the title "The State of Israel, Its Position and Its Policy." It is revealed by Kol Israel, the Israeli radio, that this book completely disregards the fact that Russia was among the countries at the U.N. which supported the 1947 resolution calling for the creation of the State of Israel. Similarly, all mention is omitted of the Russian declarations during 1947 and 1948 about the moral duty of the world to provide the remnants of European Jewry with a national home in Palestine.

This revelation is minor compared with other reports, from United Nations and other sources, which indicate that the anti-Jewish campaign has been intensified in Russia. Marop Rossi, the U.N. correspondent of the Christian Science Monitor, states that "news that Jews in the U.S.S.R. were being persecuted could not be hidden from the outside world"; that the Kremlin has set up a special propaganda office to deal with the Jewish question; that through this new office the Communist rulers have undertaken a vast campaign at home in order to destroy Jewish nationalism and that this campaign at the moment is aimed at defaming Israel and disrupting Soviet Jewry as a people.

Soviet Jewish tourists to Israel were enlisted, upon their return to Russia, to address compulsory mass meetings at which they spoke with antagonism of Israel. According to Rossi, "members of the Moscow Synagogue were made to sign spontaneous letters to the chief rabbinate in Jerusalem requesting that Israeli representatives should not appear in the synagogue since their behavior is unbecoming and they violate the Sabbath."

While this reveals a grave situation, some reports state that the new actions of U.S.S.R. leaders serve to inspire new interest in Israel among Russians. But that's small consolation in view of the dangers that are being imposed upon Russian Jews by their masters.

In a signed article in the New York Times, Harrison E. Salisbury, who, by virtue of his experiences in Russia as a correspondent for his newspaper, is looked upon as a well-informed person on occurrences behind the Iron Curtain, stated that "the Jews are 21 times worse off in regard to facilities for worship than the Baptists and 13 times more poorly provided for than Russian Orthodox believers. He pointed out that "no Hebrew Bible has been permitted in Russia since 1917," that "the Jews have been permitted only to issue a photocopy edition of a handwritten calendar," that while Orthodox, Baptists, and Moslems are permitted to have nationwide organizations to represent their religious and lay communities "similar organization for the Jews is forbidden."

Such is the status of Jews in Russia about whom Milt Freudenheim wrote to the Chicago Daily News from the United Nations that "a new crisis for the estimated 3 million Jews living in the Soviet Union is expected in a few weeks when the first Soviet census since 1939 is slated," and he adds: "Soviet Jews have been required to state their nationality as Jewish on identity cards which (since 1948) have singled them out for discrimination in jobs, schools, and the Communist Party."

Communist tactics on the world scene are disturbing enough to make the democratic world suspicious of everything that emanates from the Kremlin. But the Russian anti-Semitic tactics are much more shocking. They represent a reversion to medievalism and are indications of an inheritance from czarism that even many extreme leftists have been unable to shake off.

What the Russian Communists are doing today is merely a reenactment of Nazi tactics. Russian identity cards carried by Jews must carry the designation "Yevrei"—"Jew." That is how the clock is being turned back, and the yellow badge is being reinstituted in another form.

In a study made by Moshe Decter for the ADL of the position of Soviet Jews under Khrushchev, we learned that accomplishments by Jews were kept from the record of the Soviet regime's achievements in the past 40 years, and that there was deliberate concealment of facts about Jewish attainments. One of the revealing facts is that in listing the publications in 124 languages of the peoples of the Soviet Union as well as of foreign countries, Yiddish was omitted and was not considered even as deserving as "Tat," the language of a small Daghestan tribe, which boasted the publication of a single item in 1956 with a circulation of 1,000 copies. Of course, no Yiddish work has been published in the U.S.S.R. since 1948. But in 1913, literally hundreds of Jewish publications appeared in Yiddish (and Hebrew), for it was the springtide of the Jewish cultural renascence in Russia."

It is a matter of record that in the early days of Bolshevism, and even now, some Jewish writers, especially Sholem Aleichem and J. L. Peretz, were among the heroes in the Russian literary spheres, and Yiddish was encouraged. But Yiddish newspapers now are banned, anything related to Jews and to Jewry is taboo, and the only explanation for the newest actions is anti-Semitism.

Evidence of Soviet anti-Semitism is mounting. Decter reveals the existence of "a tacit quota system for Jewish students in Soviet universities and advanced technical and academic institutes." Also, "for more than a year now, official Soviet newspapers and periodicals have been regularly publishing fictionalized articles of an unmistakable anti-Semitic nature."

What better proof of the latter point than the missionary and self-hating expressions in the Nobel Prize winning novel "Doctor Zhivago," by its author, Boris Pasternak, a Jew who was converted to the Greek Orthodox faith—Boris Pasternak who now is himself the victim of Soviet persecution?

This is an almost insoluble problem—for the present, at least—in the midst of a world crisis which has not yet reached its peak. As long as the world East-West tensions continue—and the West Berlin situation points to a prolongation rather than a speedy solution of the problem—the position of Russian Jewry, and the issues emanating from Soviet hostility toward Israel, will remain very grave. All of it is part of the threat to the peace of the world, for which the U.S.S.R. must be held responsible.

Dedication of New Supreme Court Building in Brooklyn, N.Y.

EXTENSION OF REMARKS
OF
HON. FRANCIS E. DORN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 3, 1959

Mr. DORN of New York. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following introduction by Justice Gerald Nolan and the invocation by the Right Reverend James Pernette DeWolfe made at the dedication ceremonies of the New Supreme Court Building in Brooklyn, N.Y., on January 5, 1959:

Presiding Justice NOLAN. Judge Keogh, reverend clergy, my distinguished companions who will participate in these ceremonies, my brethren of the bench, bar, ladies and gentlemen, for your chairman of the judges' committee on arrangements I have always had nothing but the highest regard and the warmest affection, and that introduction has not changed my mind one iota.

I have known him for many years as an able and distinguished judge, but it was not until he was gracious enough to send me a few days ago a copy of this program that I also discovered that he is a great executive and a diplomat of the highest order.

Somewhere, somehow, and I cannot imagine how or where, Judge Keogh has discovered that elderly judges, if given their heads, on occasions like this are apt to wax oratorical. In other words, they speak too much and too long.

With that thought in mind, I am quite sure, he wrote me a very short but very pointed letter enclosing the program of the day. He suggested very tactfully that he agreed with my opinion that brevity should be the order of the occasion.

He suggested, quite frankly again, that my introduction should be short and to the point. It was not until I examined the program carefully that I appreciated to the full the extent of this man's executive ability, because I found out when I looked at the program that without the aid of any suggestion or instruction from Judge Keogh that what had been suggested in the letter had been accomplished when the program had been aranged, because the function of your presiding justice is clearly defined: He is to preside and not to talk.

I have only one reseravtion and that is to bring to Judge Keogh and his associates a very brief message from our court, and all of the judges of the appellate division bring today, of course, their congratulations and their very best wishes. They have asked me to say to Judge Keogh and his associates that they are very proud to be present on this happy and historic occasion.

And, having delivered that brief message, I shall now without reservation attempt to conduct the ceremonies according to the plans and specifications so ably prepared by your chairman.

It is my first privilege to announce—and it is a privilege because we are all honored by his presence here today—that the invocation will be pronounced by the Right Reverend James Pernette DeWolfe, bishop of the Diocese of Long Island. Bishop DeWolfe.

(All arose during the invocation.)

The Right Reverend JAMES PERNETTE DEWOLFE. Let us pray. Almighty Father, from whom all good things come, grant we beseech Thee Thy blessing upon this building that will be the seat of the supreme court of this State.

May those who sit here in judgment be moved to promote and improve the conditions of society so that they shall make such transactions of man with man liberal, unselfish and brotherly.

Help those who sit here in these chambers and those who plead before the court to set their faces and influence against violated trusts, unhallowed dealing and all injustice. Give them grace to withstand every wrong and to be exponents in the state of truth, justice, and righteousness.

Grant that all who practice here may constantly acknowledge the supremacy of divine justice, so that in all covenants they may seek truth and not victory, and that their own lives may be purified by the divine law and the remembrance of the strict account which they must one day give of every thought, word, and deed before Thy judgment seat.

In the name of the Father, the Son, and the Holy Spirit, one God, world without end. Amen.

Tribute to the FBI

EXTENSION OF REMARKS
OF
HON. AUGUST E. JOHANSEN
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 3, 1959

Mr. JOHANSEN. Mr. Speaker, many times in the history of its indispensable and patriotic service, the Federal Bureau of Investigation and its Director, the Honorable J. Edgar Hoover, have been the target of vicious attacks by criminal and subversive elements.

Another such campaign of smear and defamation is currently underway.

As long as the American people are vigilant and informed of the facts, this present campaign will meet with no more success than those in the past.

In a recent editorial in the NAM News, published by the National Association of Manufacturers, attention has been ably called to the outstanding work of the FBI and Director Hoover.

Under permission to extend my remarks, I include the editorial from the NAM News:

BULWARK AGAINST CRIME AND SUBVERSION

The business world in America had long been proud of the FBI and its Director, J. Edgar Hoover. This agency is one of the most efficient, well-run, and businesslike agencies in the Government. Time after time Mr. Hoover has been a forerunner in adapting new business techniques to the operations of the FBI. He and his staff are always alert to procedures which will enhance efficiency and morale and reduce costs.

The operating efficiency of the FBI, in fact, could serve as a model not only for other governmental agencies but also for private business firms. In the FBI, as it has operated since Mr. Hoover became Director in 1924, are found the basic factors which make for a successful business operation: excellent administrative control; thrift; good budgetary and accounting procedures; careful planning.

Another important factor is the high morale of the FBI's employees—so important to any successful business. The FBI is famous for its esprit de corps. The term "G men" is synonymous with integrity, initiative, loyalty, bravery and fidelity. Special agents and clerks are all proud of being on the team. This arises, in large measure, from the modern, realistic personnel policies of Mr. Hoover.

The final proof of any business firm's success, however, is the quality of its product—and in this the FBI excels. During fiscal year 1958, for example, of persons brought to trial in FBI cases, 96.8 percent were convicted. This is indeed a great accomplishment, reflecting the high quality of FBI investigations. Moreover, time after time the FBI, from its effective work, actually brings back to the Government more money than is spent for its operations. In fiscal year 1958, for example, the FBI effected over $132 million in savings and recoveries to the Government in comparison with a total of $105,500,000 in direct appropriations approved by the Congress for this agency.

This is a fact of great importance to every taxpayer in the Nation.

Unfortunately, this efficient, business-type organization is today the object of a vicious smear campaign. The purpose is to destroy the effectiveness of the FBI as a bulwark of our internal security.

In the forefront, as could be expected, is the Communist Party. Time after time the party and its press have attacked the FBI. The party knows that it will never have any success until the FBI is destroyed or badly crippled.

It is disconcerting, however, to find the Communist Party aided and abetted in its efforts by other influential elements which profess to deplore communism. In its October 18, 1958, issue, a well-know magazine of the intellectual left devoted an entire issue to a deceitful attack on the FBI by a newspaperman who is notorious as an apologist for Alger Hiss. In this combination of falsehoods, innuendos and misinterpretations designed to mislead the unwary reader, the FBI is falsely charged with just about every possible wrong that can be imagined.

A New York newspaper long noted for its propensity to slant and distort information concerning law enforcement against subversive organizations and individuals also is joining in the attack on Mr. Hoover and the FBI. Under the guise of objective reporting, this newspaper has announced it will publish a series of artiles concerning the FBI and its director. It begins to look as if a concerted campaign is afoot among those who always seem to deplore efforts to deal effectively with subversion and subversives to get J. Edgar Hoover's scalp and curb the activities of the agency he heads.

This has been tried a number of times before with conspiculous lack of success. The effort will fail again if the American people know the truth and are not misled by the sly propaganda of the anti-anti-Communists.

After 6 Years of Nasser: Promises—and Poverty

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 4, 1959

Mr. MULTER. Mr. Speaker, I commend to the attention of our colleagues the following article by John Law, which appeared in the U.S. News & World Report of December 19, 1958:

AFTER 6 YEARS OF NASSER: PROMISES—AND POVERTY

CAIRO.—Egyptians, in their sixth year of a Nasser dictatorship, are still waiting in vain for the great day promised them by their ruler.

As a matter of fact, most of them are worse off now than they were when Gamal Abdel Nasser took charge.

One of my first impressions upon returning to Egypt after a year's absence is that times are a bit harder now than they were a year ago. There seem to be more beggars in Cairo, and just as many diseased-looking people as ever. The streets look dirtier. Shops are less plentifully stocked.

When I went beyond this surface impression for a closer look, I found this situation:

There were shortages of all kinds. At the time I arrived, there had been no tea available for 3 weeks. Rice, sugar, and coffee were scarce. Coffee was not available even at a coffeehouse I visited.

Kerosene, used by most Egyptians for cooking, was rationed. Razor blades were hard to get. It was impossible to find any brushless shaving cream. There were rows and rows of empty shelves that used to be stocked with cosmetics. A housewife said she went to 10 Cairo drugstores before she found a bottle of ordinary aspirin tablets.

There is a growing scarcity of housing. Private construction of homes and office buildings is now banned by the Government because it wants to force private capital into industry. The Government is building low-cost living units, but not fast enough to meet the needs. About 25,000 units have been built throughout Egypt since Nasser came to power. But Cairo alone needs 30,000 new dwellings every year. More than 65 percent of its people live in slums.

Costs of goods and services are higher than ever. Reliable estimates place the increase in the cost of living since the Suez war in 1956 at anywhere from 20 percent for the poorer people to 35 percent for wealthier Egyptians.

Prices of some staples are fixed low by the Government, but supplies are so limited that people are forced to turn to the black market and pay prices 50 percent above the legal rate. Imported suit material costs more than $25 a yard. An imported nightgown sells for $100.

FROM REDS, POOR GOODS

The country just can't afford to import many of the things it used to, and Egyptian substitutes for the imports—cigarettes, for example—are of poor quality. Because of the shift in trade toward Soviet-bloc countries, the average Egyptian has had to get accustomed to a lot of things he regards as shoddy merchandise.

Take tea, for example. Practically all of Egypt's tea used to come from Ceylon and India. Now most of it comes from Communist China. Egyptians will tell you they don't like the China tea, but there's nothing they can do about it because the Government has a monopoly on tea imports, and buys from China because it is cheaper.

Services are on the downgrade, too, because skilled foreigners are disappearing. Because of Nasser's policy of Egyptianization, thousands of foreign craftsmen who had lived in Egypt all their lives have had to leave the country. Native Egyptians have not yet developed the skill and experience needed to replace the foreigners.

A TIGHTENING SQUEEZE

The overall result is an austere life for most people. What has brought on this austerity is that Nasser has failed to solve age-old problems that he inherited from the ousted King Farouk. Egypt does not grow enough to feed itself, it has little in the way of natural resources, and its population keeps getting bigger and bigger. Consequently, the squeeze on the supply of food and other products keeps getting tighter and tighter.

The road Nasser is now choosing to find his way out of his troubles at home is one of massive industrialization. He dreams of making Egypt the manufacturing center of the Arab world—the supplier of goods for the entire area. With the profits, he hopes to be able to buy abroad the food and other products that his own country needs.

Actually, Nasser has made big strides in raising industrial production, particularly in such fields as fabrics, fertilizers, cement, raw sugar, and electric power. And he could go much faster if he were not manufacturing so much military equipment. But, in some fields, he is building production up way beyond the ability of local consumers to buy, and he may have trouble getting rid of resulting surpluses.

Even the Government-owned National Bank of Egypt, in a recent report, criticized the establishment of a new weaving plant for rayon fabrics and of a spinning mill because marketing is becoming a serious problem. The Bank also said marketing of cement will become a big problem later this year when a new plant brings Egypt's annual capacity to well over 2 million tons.

BROTHERHOOD VERSUS COMPETITION

Economists are asking where Egypt expects to sell the thousands of sewing machines that will be produced annually by a new plant soon to be completed. They point out that, in the sale of most manufactured products, there is intense competition from more experienced producers in the United States, in Europe, and Japan. Nasser, however, is said to be counting on the spirit of Arab brotherhood to prompt his neighbors to buy Egyptian. If they don't, he'll be in trouble.

Nasser is putting Egypt heavily in debt to finance his industrialization program. Already he has borrowed nearly half a billion dollars abroad, not counting what he owes for Soviet-supplied arms. He has been using up his foreign earnings—including income from the Suez Canal—just as fast as they come in.

One reason he is in such a hole is that he isn't getting as much from Iron Curtain countries as he had hoped. Half his exports go to the Communists, but the Reds supply only a quarter of his imports. The result is that Nasser has to turn to Western producers and spend money he can ill afford. One high-ranking Egyptian financier recently described this continued imbalance of trade as untenable for much longer.

The attempt to industrialize has produced a great deal of Government planning and Government control. More than 87 percent of the capital that went into the economy last year was Government capital. The law gives the Government the right to take control of any company in which it holds 25 percent of the shares. A Government license has to be obtained before any new plant can be established.

JOBS FOR NASSER'S PALS

Critics say that Nasser has had a tendency to appoint personal friends—often old army colleagues—to planning and administrative jobs, and the results have not always been happy. They cite examples such as these:

In Liberation Province—an irrigated area of desert that was supposed to be a showplace of what Nasser's Government could do—a citrus-canning plant was built long before the orange trees in the area were old enough to bear fruit.

Numbers of factories were created. They began turning out goods no one could afford to buy. They have now been closed down.

A whole village was built before it occurred to anybody that no water supply was available for it.

One department of the Government has gone ahead with a scheme to establish more than 30 refrigeration depots around the country. But there is no transportation adequate to move imported frozen foods from ports to these depots. And, at present, there are no facilities at the ports to store quantities of food prior to distribution.

WHAT ABOUT LAND REFORM?

The Cairo Government hasn't had much better luck with its farm program—a land-reform system started in Nasser's first year of power as a means of boosting farm production. Actually, only about 10 percent of the land was affected, and yields on this acreage have gone up only slightly.

Great numbers of peasants who received small parcels of land from big estates that were divided up feel that they are not much better off, if at all, than they were as sharecroppers. In those days, they were given tools, fertilizer, and other equipment needed to till the land. Now they have to supply their own. They have to sell their produce at fixed prices.

The Government has no provision for taking care of the peasant-farmer in years of poor harvests. In the old days, landlords might exploit their tenants in good years, but they found it to their own interest to take care of the sharecroppers during lean periods.

Many farmers also find they are unable to cope with the mass of paperwork—filling of production forms, tax forms, etc.—that goes with running a farm. And the former landowners whose land was requisitioned haven't come off well. They were to be paid in 3-percent Government bonds, redeemable in 30 years. Many of them have never received the bonds.

Even if all of Nasser's planning went off without a hitch, chances of raising Egypt's standard of living still would be very poor. The average Egyptian's income is less than $120 a year, and, on the basis of the present outlook, is more likely to go down than up. A United Nations agency has estimated that, if all the schemes ever drawn up by Egypt to raise its standard of living were put in operation, the nation would be no better off in 1975 than it is now.

LITERACY AT A STANDSTILL

As if all these economic problems were not enough, Nasser has had trouble fulfilling other promises of his revolution. Education is a case in point. More than 80 percent of Egyptians were illiterate when Nasser took over—and the percentage has not changed since.

The Government has built thousands of schools and spends as large a percentage of the national income on education as does the United States. Yet it has barely been able to provide enough school facilities for the increased number of children reaching school age each year.

There is accommodation for less than half the children who should be in elementary schools. At the higher levels, education has been available to many more students, but educators say the result has been to lower standards. In Cairo University, as many as 800 students are enrolled in some classes.

In the field of health, there are problems, too. For one example: Out of every four babies born, one dies. Another example: Many hospitals have been built, but there are only 7,000 beds for 300,000 tubercular patients. In the Egyptian countryside, there is only 1 doctor for every 12,000 people.

BRIBES: FOR RICH ONLY

Another of Nasser's problems is official corruption. He cracked down hard when he first came in. Lately corruption has been on the increase. It still isn't as bad as in the days of King Farouk, but it is bad enough to produce such remarks as this from Egyptians:

"The difference between corruption under King Farouk and corruption now is that now you have to go higher and pay more. All that's happened is that bribery has been taken out of the range of the little man's pocket."

Nobody questions Nasser's desire to wipe out corruption, but they say he has a tendency toward cronyism that prompts him to go easy on any revolutionary colleague who may be accused of corrupt practice.

All these problems, still unsolved, are beginning to cause a certain amount of disillusionment. You hear more grumbling than you did a year ago. There is a growing awareness that eloquent speeches and imaginative new laws have not been enough to wipe out old evils. Many improvements exist only on paper.

PRIDE—AND DOUBTS

There are few, if any, signs that the dictatorship is in any serious danger. Nasser's control is quite tight. And Egyptians as a whole admire him for what he has done in international affairs, for the place he has given their country in the world spotlight.

Yet, there are more and more Egyptians who are beginning to wonder if they will ever achieve prosperity as well as self-respect. More and more are pessimistic. Many who once forecast a bright future will now tell you they don't really think things are going to change very much.

There is little room for doubt any more that Nasser's record at home is falling far short of the glowing promises that were made with his rise to power 6 years ago.

Extinction by Throughway

EXTENSION OF REMARKS
OF
HON. OVERTON BROOKS
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Monday, February 2, 1959

Mr. BROOKS of Louisiana. Mr. Speaker, under leave to extend my remarks, I wish to call attention to the following article which is a reprint from the Reader's Digest. This is an ably worded article and worthy of serious consideration:

EXTINCTION BY THROUGHWAY: THE FIGHT TO SAVE A TOWN

(By Polly Praeger)

It began inconspicuously—just a brief legal notice in the newspaper announcing a public hearing to be held on January 9, 1957, in regard to the route of a Federal superhighway through Broome County, N.Y. Most people had been too busy with Christmas to see the notice, but a few of us in Hillcrest, a quiet suburb of Binghamton, were among the hundred or so who turned out to listen to the district engineer's technical description of the beautiful expressway that was to cost at least a million dollars a mile.

Hillcrest was not even marked on the map he displayed. When he called for statements from the town of Fenton (in which Hillcrest is located), both our supervisor and the town attorney declared they could say nothing unless they knew where the route was to go in relation to Hillcrest. Clayton Axtell, Jr., our schoolboard attorney, pressed the point: "This hearing is inadequate by law. The route does not deal with specific localities."

Three or four others tried to get specific information on the route. But the district engineer was adamant: "Details cannot be given now. The route could go one way or the other."

Since Hillcrest (population 3,000) is only about a mile long and a half mile wide, a mile could mean the difference between bisecting and by-passing. We left the hearing feeling helpless. "What chance do we have against the State department of public works and the U.S. Bureau of Public Roads?"

A lot of Americans are going to feel this same bewilderment and frustration during the next few years, as the huge Federal highway program gets under way. Perhaps our experience, local though it is, may prove useful to others in a similar fix.

At the next meeting of the Hillcrest Community Association I suggested that we write to John W. Johnson, State superintendent of public works, protesting the conduct of the hearing and requesting permission to have a statement from Hillcrest made part of the record. That's how the fight began.

In reply Johnson said: "We would request that you file your statement as soon as possible. The department of public works will attempt to consider such changes in alinement as may be possible, in order to minimize destruction of property and still maintain an economical route for the project."

The State's willingness to restudy the route made us feel that we must do a thorough job of presenting facts in our behalf. An appointment was made for me, as chairman of our community association committee at the public works department's offices in Albany. An assistant deputy engineer spread a large-scale map of Hillcrest before me. The worst rumors we had heard were true. You cannot superimpose a six-lane highway with 4 access roads and 4 traffic circles on an already developed community the size of ours without making mincemeat of it. A more thorough job could hardly have been done, in terms of destroying water wells, taking a third of the new elementary-school property and knocking out over 100 new houses, the loss of which would take at least half a million dollars in assessed valuation from the town tax rolls. There was also an estimated loss of a million dollars in assessed valuation to the board of education.

Worst of all, the community as a community would be destroyed. All available land was developed and displaced people could not move from one section to another. Those who remained would be separated into little islands by the expressway, and they would be faced with a much heavier tax burden.

Next, our committee had a session in the district office in Binghamton. On the map we spotted a line called Alternate A, which bypassed Hillcrest.

"Why can't Alternate A be used?" we asked.

"The State never really considered that, because it is too far from Binghamton," the district engineer explained. "No one would use it."

We studied the two possibilities. We had interviews with civil defense authorities on the location of defense highways (preferably 12 miles outside critical target areas like Binghamton). We had interviews with bankers on increased interest rates and the difficulty of getting mortgages; we held a conference with the director of the Broome County Planning Board; we studied highway law. And ceaselessly we kept Albany and the Washington Bureau of Public Roads and our legislators apprised of what we were doing.

Now the battlefront widened. Every possible group joined with us in a committee that included Rotary and Kiwanis, churches, the American Legion, PTA, town board, board of education, garden clubs. We also organized a subcommittee of prominent engineers who live in Hillcrest and work for such companies as General Electric, Ansco, and Link Aviation.

Not all our local newspaper publicity was favorable; we were accused of delaying progress. But an editorial in the Binghamton Sun summarized my own feeling about the whole problem: Offer of organized citizens of Hillcrest to withdraw their opposition to the expressway if it can be shown that the alternative they have proposed would be less direct, more expensive, or impractical for any other reason, reflects a genuine regard for the principle of the greatest good for the greatest number. The State agreed to restudy the route and hold an informational meeting at which their decision would be announced to the people of Hillcrest.

Eight hundred citizens gathered to hear the outcome. Hillcrest was still the recommended route—because it would be cheaper than Alternate A by $9,500,000. This because Alternate A would require an additional $5 million bridge, and would entail additional costs to road users which would amount to $4,500,000 over a 20-year period.

Our committee, having had advance notice of the engineers' decision, had prepared a statement in rebuttal. We denied the need of an additional bridge, and we claimed that road users' costs were not properly costs to the taxpayers as such. We thought it only fair, if the State was going to include social costs, that it should also admit all other social and economic costs which would have to be paid by the people of Hillcrest, residents of the town, and the school district. We estimated them in dollars over the 20-year period and found they greatly outweighed users' costs. After reading the statement aloud, I turned to the audience and said, "It is the recommendation of our committee that we continue to seek a genuine consideration of all factors. We will appreciate an expression of your opinion."

Nearly everyone in that huge group stood up and applauded. We had our answer.

The committee decided to secure the services of an impartial expert to assess the validity of our position. Since the issue was not the engineering feasibility of one route over the other but the social and economic costs to the area, we approached Dr. Seymour Z. Mann, professor of political science at Harpur, the State's liberal-arts college in nearby Endicott, who had been active in community and county planning. He refused to accept unless he would be free to draw his own conclusions. To this we agreed.

In a preliminary discussion with the district engineer, Dr. Mann was asked, "How can you deal with these emotional people who run to their elected representatives in Albany and Washington?"

Dr. Mann replied: "If people feel strongly about a problem that requires political action, then they should use all legitimate means at their disposal. It is part of the representative process."

Our State senator, Warren M. Anderson, after attending a meeting of the Hillcrest committee, decided that our objections were valid and arranged a meeting between committee members and Superintendent Johnson in Albany. Dr. Mann's excellent analysis—which upheld our position—was presented at this meeting in May. Johnson ordered the full review we wanted, and the committee rested its case.

From January 9 until late October is a long time when you are waiting to know the fate of your home or community. But on October 20, 1957, came the report, "Hillcrest bypassed," and headlines announced a totally new concept for two major routes. We read for the first time of a proposed common route for several miles through Binghamton and Johnson City of both the expressway and Route 17—the East-West State highway. This confluence was to make the area a transportation crossroads and bring great economic prosperity.

We in Hillcrest will never know how much our stand had to do with the new plan. But what happened in our community almost certainly will occur elsewhere.

A network of superhighways across the face of America will be an empty achievement if it kills democratic processes and ignores long-range community planning. Our experience has convinced me that Congress was wise in providing citizens with the opportunity to be heard on a program that deeply affects so many lives.

LAWS RELATIVE TO THE PRINTING OF DOCUMENTS

Either House may order the printing of a document not already provided for by law, but only when the same shall be accompanied by an estimate from the Public Printer as to the probable cost thereof. Any executive department, bureau, board, or independent office of the Government submitting reports or documents in response to inquiries from Congress shall submit therewith an estimate of the probable cost of printing the usual number. Nothing in this section relating to estimates shall apply to reports or documents not exceeding 50 pages (U. S. Code, title 44, sec. 140, p. 1938).

Resolutions for printing extra copies, when presented to either House, shall be referred immediately to the Committee on House Administration of the House of Representatives or the Committee on Rules and Administration of the Senate, who, in making their report, shall give the probable cost of the proposed printing upon the estimate of the Public Printer, and no extra copies shall be printed before such committee has reported (U. S. Code, title 44, sec. 133, p. 1937).

Appendix

Address by Gov. Sam Houston Jones, of Louisiana, Praising Andre Olivier

EXTENSION OF REMARKS
OF
HON. EDWIN E. WILLIS
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 4, 1959

Mr. WILLIS. Mr. Speaker, on October 12 last, in my hometown of St. Martinville, the descendants of the Acadians and many other prominent citizens from throughout the State of Louisiana gave a testimonial banquet for an illustrious gentleman and a scholar, the Honorable Andre Olivier.

Andre, as he is popularly called, is a proud, native son of St. Martinville. A large segment of the original settlers of this second oldest town in Louisiana came directly from France, as did the ancestors of Mr. Olivier. It was natural, therefore, that the French Acadians should settle in this general area when they were banished from Nova Scotia by the British in 1755. Still later more people from France and especially from Paris migrated to St. Martinville during the French Revolution in the 1790's, and it is because of this French background that St. Martinville is frequently referred to as the Little Paris of America. The mass exodus of the Acadians was made immortal by Longfellow's poem, "Evangeline," one of America's great classics. Longfellow's "Evangeline," Emmeline LaBiche in real life, met her long-separated lover under the Evangeline Oak on the banks of the charming Bayou Teche in St. Martinville, and is buried in the rear of the town's ancient Catholic church.

Andre is recognized locally and from far and wide as the official historian of the land of Evangeline. He has devoted a lifetime to the preservation and perpetuation of the culture, traditions, customs and folklore of the Acadians. He is not a man of means, but a good name is better than riches. It seems to me, Mr. Speaker, that the great use of a life is to spend it for something that outlasts it, and such has been the goal of Mr. Andre Olivier.

The principal speaker at the banquet, where Andre's legions of friends met to do him honor, was the former Governor of Louisiana, the Honorable Sam Houston Jones. His address deserves a place in the permanent archives of our history, and for that reason I, under unanimous consent, insert in the CONGRESSIONAL RECORD and commend it to my colleagues as worthwhile reading and useful research material.

Governor Jones' address follows:

When he had reached the age of threescore years and ten my father wrote what has been termed "A History of Beauregard Parish." Strictly speaking it is not a history but a collection of memories and stories of the early pioneers and peoples of that west Louisiana section where both he and I were born. Today, 20 years after his death, that little manuscript is the most prized historical source record in existence treating of that locality.

I have been intrigued by the concluding portion of his treatise when he said:

"If there is anything else you wish to know about old times and oldtimers in this vicinity, see me privately and I will tell you if I know, and if I do not you might see my good colored friend, John Towner, an ex-slave, who is the best informed person now living, as to the pioneers of this country. If neither John nor I can tell you, you will not likely ever secure the information."

And no truer words were ever spoken. Yet there is pathos and sadness in them. For with him, and his contemporaries, died the major portion of the history of my people. No one else had taken the trouble to preserve, or reduce to writing, the history of a frontier civilization occupying a portion of what was once known as the neutral territory. It has been fought over by France and Spain. It had been contended for by the United States and Mexico. Far up in its northern hills one may search and find the crude evidences which mark the first capitol of the Spanish Province of Texas—the Presidio de los Adaes.

And because there were no histories to record the events of those early days, we are left largely to imagination and guesswork and legend as to how people lived, and who did what, and what forces worked to bring the evolution of modern civilization to the frontiersman who lived largely by his gun and his dog and his fishing rod.

And thus, with few exceptions, it has always been. Great civilizations lie buried forever beneath the sands of the Sahara and below the rocky soil of Asia Minor. One of the great mysteries is the disappearance of the glories of the Mayan civilization of the Yucatan and Guatemala, the slaughter of their intellectual aristocracy, and the utter destruction of their once fertile lands.

Only today are we beginning to discover a few of the fragmentary keys to the early history of the Vikings and their unbelievable exploits and travels to the ends of the earth. And what you can say of these you can multiply scores of times over about many civilizations which have risen and flourished and been sunk from history without a trace.

It is one thing to make history. But, for posterity, it is much more important to preserve it. And that points up, not only the wisdom and advisability, but the absolute necessity of historians, and of collectors and preservers of objects and things which give posterity an insight into the ways of life of days gone by. Occasionally fortuitous circumstances will uncover historic relics of priceless value, such as the now famous Dead Sea scrolls. Then once in a thousand years there will come upon the earthly scene an Arnold Toynbee with a searching will and inquisitive mind who can, within limits, assemble and reconstruct the history of a millennium.

I shudder to think what would have been the effect on the Christian church had not the beloved physician, St. Luke, not only taken time to write the Gospel that bears his name, and the Acts of the Apostles, but also to encourage others, including St. Paul, both to collect and assemble, and to write down the historic events of the early New Testament days.

The Roman Empire was far more fortunate than most in the preservation of its far-reaching history. Not only was it blessed with contemporary historians and those who, in the perspective of time, wrote, analyzed, and appraised the vast influence of that civilization on humanity. It had something else equally as important. The Romans built enduring works, wherever they went, that remind us of their way of life. Those works are there today, some preserved and some in ruins—all the way from the British Isles on the west to the borders of Asia on the east—all the way from north Africa on the south to the North Sea on the north. And they are mute, but impressive, testimony of the grandeur and glory of a civilization seldom, if ever, equaled since the beginning of time.

We were more fortunate in America. We began our existence in modern days when it was easier to record and preserve the important events of passing time. But even here we have our examples of the importance of preserving contemporary things. And, again, I shudder to think, how great our loss would have been had not Alexander Hamilton and James Madison and John Jay taken the time to write the "Federalist Papers," which are the key to the political philosophy that gave birth to a new concept of government, and to a new way of life.

Here in the State of Louisiana the job of our forebears was more difficult. This land for decades was a pawn in the hands of the great powers. It was later to be acquired and absorbed by a new nation whose people and language were then strange to your forebears, and whose interest in the then territory of Orleans was more incidental than real. True we had the chronicles of Napoleon and Talleyrand, and the dissertations of Jefferson and the vivid accounts of Robert Livingston, but they were incidental to other areas and other peoples.

The Frenchmen who came to this land were destined to play one of the most brilliant, romantic, and important parts in the genesis of America. They were to merge the fervor of the democracy born in France with the solidity of that which was born of English forebears.

And your ancestors who settled here among the Attakapas were not unlike those other Pilgrims who landed a century and a half before at Plymouth Rock. They both came for reasons now embedded in the basic philosophy of the American people: freedom of religion, the right of democracy, and the opportunity of economic advancement. Your ancestors were to become the connecting link between the two great western democracies, and to help in cementing a friendship which has existed from the time of Lafayette down to this day.

But there had to be those to tell the thrilling stories and to preserve the evidence of the great contributions to be made to America by the great French people, a people who had defeated the tyrants of France, who had torn down the Bastille, and who gave to us the Marsellaise. A people who penned the immortal slogan: "Liberty, equality, and fraternity," and made those words live and have meaning down through the generations to our own time.

There had to be those who could assemble and tell the story of that momentous pil-

grimage of your ancestors from far off Nova Scotia to the land of the Teche. For how else could Longfellow have written his immortal and never-to-be-forgotten words: "Beautiful is the land, with its prairies and forests of fruit trees." And his poetic description of your locale when he wrote:

"Near to the bank of the river, o'er shadowed
by oaks, from whose branches
Garlands of Spanish moss and of mystic
mistletoe flaunted,
Such as the druids cut down with golden
hatchets at yule-tide."

There had to be those who could tell and preserve the heroic exploits of your military heroes, of Beauregard and Mouton and Count de Polignac, and of John A. Lejeune and Claire Chennault; those to record and preserve the distinguished accomplishments of St. Denis, and of the Lemoyne brothers, Iberville and Bienville; of the agriculturists and scientists, like Valcour Aime and Etienne De Bore; of physicians like Chaille and Delery of yellow fever fame, and of Trudeau and Souchon and Matas.

There are always those, of course, to tell of the great public figures such as Pierre Derbigny and Villerie and Roman and Alexandre Mouton; and the illustrious "Cousin" Bob Broussard; somewhat fewer to tell of the respected jurists such as Martin and Prevost and Caillouette and Leblanc, still fewer to tell of the educators and the clergymen; and practically none to tell of the accomplishments of the merchants and traders and architects and financiers.

This grand old State of ours has gone through the most fantastic metamorpheses and revolutions. It has been French and Spanish and British and American. It has lived through success and failure. It has been the richest State in the Union and one of the poorest. It built up a civilization and a culture surpassed by none in the Nation. Yet it fell from its dizzy heights; was ravished and laid waste like a conquered province.

It has lived through wars and floods and disasters and panics and plagues. Yet phoenixlike it has risen again and is now on its way toward becoming economically one of the top 10 States of the Union.

It has a remarkable personality—a remarkable individuality. It defies classification and stands alone as the most unique State of all. It is not typically southern; it is not western. Through a part of the great Mississippi Valley it is not a midcontinent State. It is typically American—yet it is international in its mentality and philosophy.

One of its most unique contributions to American history was the Acadian migration, and the great series of events that momentous pilgrimage set in motion. It has enriched a State and a Nation. It has broadened the concept of a great people. It has immortalized one of the basic tenets of the American dream, freedom of religion.

No man who knows these things can fail to be proud of Louisiana. So far as I know I have not a drop of French blood in my veins. But the story of your people and their historic migration never fails to thrill me, no matter how many times told. The contributions of your people have made of our State a better, finer, and greater State. And the fact that the Latins and Anglo-Saxons of Louisiana, with diverse manners and customs and religions, have been able to live together in peace and harmony and understanding is one of the foremost examples of the success of the American dream.

I think much of our success has been due to the breadth of character of your people, best exemplified by what happened in the third gubernatorial election under the American flag. The time was 1820. The candidates were Thomas Bolling Robertson and Pierre Derbigny. There was a preferential election in which all the voters participated. But the legal election then was by the legislature. Robertson got the highest number of votes at the polls; but Pierre Derbigny's friends were in the majority in the legislature. They were ready to elect Derbigny, and they had a perfect legal right to do so.

But what happened? Pierre Derbigny's representative rose from his seat in the legislature and declared that he had too much respect for the will of the people to wish to be considered as a candidate for Governor, and asked that his friends vote for Robertson. And as Chambers said in his History of Louisiana, "This one act of Derbigny's * * * was more eloquent than all the resources of oratory or the skill in arraying written words could muster."

Derbigny gave up the governorship which was his for the asking, but he won for the French people of Louisiana a position of honor and integrity and leadership that has continued to this day. And, as the historian said: "As a citizen respectful of the people's will, as a believer in the right of the majority to rule, he was a success from the start."

And that is the beginning of the harmony between your people and mine. But be it remembered that the hand of friendship and understanding was first extended by the Frenchman.

But what we know about your people and mine was not given to us by the politicians and the public officials. It was given to us by the historians, by the Gayarres, by the Martins and by the Fortiers. These plodding, meticulous, methodical zealots saw other people make the history, but they wrote it and they passed it on to us, and we are the wiser, not because of those who made the history, but because of those who gathered the facts, recorded them, and passed them on to posterity.

And so, too, the beautiful story of Evangeline came to us from the poets and the historians, from Longfellow and Voorhies, and the others who took the time and the trouble to assemble, compile, record, and preserve those facts and events which have become an inspiration to untold multitudes of people, born many years after the death of those who made our history in those early years.

And there are today those who work on, and spend their lifetimes, that both contemporaries and posterity may know of the glories of the past; that it may not be dissipated with the passing of the years; that it may not be buried beneath the sands of the delta, and lost forever.

Such a man, "the historian of the Teche" and "the guide of the Attakapas country" we honor today. It has been said "that a prophet is not without honor, save in his own country, and among his own kin, and in his own house," but our friend is the exception that proves the rule, as is witnessed by this gathering today.

For more than 30 years this man has devoted his life to the perpetuation of the story of the Acadians. The world has beaten a path to his door, the great as well as the lowly. They have come by the thousands from every State in the Union, from Canada and Mexico, from Europe and Australia, from Japan and China, from Egypt and the Belgian Congo, literally from the four corners of the earth.

His museum, his collections, his knowledge has been shared by governors, by Senators, by great judges, by officials and functionaries of foreign countries, by the Armed Forces, and by the great mass of the American people who want to stand on sacred soil and bask in bright sunshine of history and have their faith restored.

That, my friends, is really the greatest tribute that can be paid to a man, and to the cause for which he works. And in the light of this our efforts to add to what these multitudes have, by their actions, said, seems puny, indeed. Perhaps it has been best said by Colonel Landers, of the historical section of the Army War College, when he said to our friend:

"You are doing more than any other person to make others see your fair land with sympathetic and understanding eyes. It is difficult always to be able to impress the casual and ignorant observer with the significance of a building, a stream, a grave, or a tradition. A pioneer worker must bear the load. In your field you are working with a concentration of romance and history not excelled in beauty anywhere in our country."

To what the colonel has said I could add only this: Our friend is perpetuating for us and American posterity one of the finest and most inspiring events in the Nation's history. He is retelling, with infinite patience and infinite dedication, the great epic of a great people, the inspiring saga of a courageous band of pioneers.

You have many great and illustrious people here in the parish of St. Martin. I imagine most of you would place someone else at the top of your list of distinguished citizens, because of what that person has done, or by reason or the fact that he is making contemporary history. But I say that, viewed in the perspecitve of time, and considering the good that he will do for the education and edification of the multitudes yet unborn, Andre Olivier takes first rank among the residents of your parish.

He has been a useful citizen to his community, his State and the Nation. It is his kind who collect and preserve and disseminate the knowledge and information that influences the direction of peoples and of nations. It is his kind who leave their imprint on the thinking of people for generations to come. And when I think of men like him I am reminded of that poem which I memorized as a boy:

"Lives of great men all remind us
We can make our lives sublime;
And departing leave behind us
Footprints on the sands of time."

We can rest, in quite assurance, that Andre Olivier's influence will be felt down the generations, and that his footprints will be firmly planted on the sands of time.

I have read and heard it said that Andre Olivier is the descendant of an illustrious nobleman of France. That, and his heritage from Grandpré, go far to explain the greatness of the man and his selfless service. But I think what is more important than the fact of his descent from a nobleman of France, is the fact that he is a noble man himself, and in his own right. And when you honor him you honor all that immortal band of Acadians who gave us the memorable story of Evangeline and its inspiring lesson to Americans everywhere.

Never Underestimate the Power of a Woman

EXTENSION OF REMARKS
OF
HON. HUGH J. ADDONIZIO
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 4, 1959

Mr. ADDONIZIO. Mr. Speaker, as one who never underestimates the truth of the slogan "Never underestimate the power of a woman," I am most pleased that the General Federation of Women's Clubs has embarked upon a nationwide program called passport to safety. The

campaign is well described in the following letter from Mrs. W. J. Jennings, corresponding secretary of the West Orange, N.J., Women's Club. The traffic accident problem is of ever growing concern for all our States, and the federation is to be congratulated for its safety program. Highway safety—attainable through enforcement, education, and engineering—is an area in which the Federal Government should participate in cutting the appalling casualty lists.

I commend Mrs. Jennings' letter to my colleagues' attention:

WEST ORANGE WOMEN'S CLUB,
West Orange, N.J., February 20, 1959.

Hon. HUGH J. ADDONIZIO,
11th District, New Jersey, Representative, Washington, D.C.

DEAR MR. ADDONIZIO: The members of the West Orange Women's Club are earnestly concerned about the traffic accident problem in our State and the open disregard for the law demonstrated by so many of our motorists.

Because of this condition, we wish to go on record as endorsing improved driver licensing standards and procedures which will permit on our roads only those who prove themselves competent drivers, who follow the rules of the road, who respect the rights of others, and who thereby earn the privilege to drive.

As a member of the General Federation of Women's Clubs, with 7 million members nationally, we are active in a nationwide program called passport to safety. Our members are emphasizing their concern by signing a ballot for better driving licensing, which is being brought to the attention of our State and public officials.

Action must be prompt and there must be an efficient screening system. Be assured that we stand behind you in your effort to revise our present laws where necessary and to enact every needed additional legislation, as well as to provide adequate funds to achieve a strict, impartial, and realistic licensing program for our State.

We feel that the time has come when each driver must meet definite standards of performance to earn and to retain his driving privilege. We stand ready to give you our active support in your efforts on behalf of better driver licensing.

Very truly yours,

RUTH L. JENNINGS
Mrs. W. J. Jennings,
Corresponding Secretary.

Maryland Voluntary Weather Observers Praised

EXTENSION OF REMARKS
OF
HON. JOHN R. FOLEY
OF MARYLAND
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 4, 1959

Mr. FOLEY. Mr. Speaker, the Weather Bureau of the Department of Commerce recently issued a special edition of the Weather Bureau's daily weather map in honor of 21 veterans of the nationwide corps of about 7,000 cooperative volunteer weather observers who take and record weather observations every day of the year without compensation.

Among the 21 veteran volunteers—those who have taken weather observations daily for more than 50 years—Maryland is the only State in the Union that can claim two of these distinguished citizens as her sons. And, it happens that the Sixth Congressional District of Maryland is the only congressional district in which two of these honored volunteers reside. I refer to Mr. D. Paul Oswald, of Hagerstown, Md., who has been a weather observer for 57 years, and Mr. Ralph E. Weber, of Oakland, Md., who has served for 56 years.

Dr. F. W. Reichelderfer, Chief of the Weather Bureau, in praising the work of these remarkable senior citizens said that without the daily records of these cooperative observers our knowledge of the climate of the United States would be meager. He added that this weather work is an outstanding example of people serving their Government without pay, and he thought their daily but unsung efforts merited the applause of their fellow citizens.

Mr. Speaker, I would like to include in my comments at this point a brief background statement on both Maryland veteran volunteer weather observers which was included in the Weather Bureau citation:

D. Paul Oswald was born March 15, 1886, on the family farm in Chewsville, Md. In May of 1898 his father consented to the establishment of a weather station at his home as a hobby and education for his sons. D. Paul Oswald began sending in weather observations in February 1902. In January 1948 he moved to Hagerstown, Md., where he still makes his daily observations at the weather station called Chewsville-Bridgeport, a combined name of the two stations he has operated. He was recently on the Science Program closed circuit television for Washington County schools, and has for decades provided weather facts to local newspapers and radio stations.

Ralph E. Weber, cooperative observer at Oakland, Md., since September 1903, has the second longest period of service of any present Maryland observer. He was born in March 1887 in Oakland, and has lived all his life on the family farm. Here he makes his daily weather observations, and here he read the lowest surface temperature ever recorded south of the Mason-Dixon line, 40 degrees below zero, on January 13, 1912.

And I want to add my own sincere congratulations and best wishes to these two distinguished gentlemen, on behalf of myself and the entire Nation. Their citation for special merit by the Weather Bureau is a great tribute to their dedicated and unselfish public service. They perform an invaluable and indispensable service to industry, commerce, agriculture, and national defense without fanfare and without sufficient public recognition of their service to the community.

In addition, Mr. Speaker, I should like to include in my comments part of a statement released by the Weather Bureau on February 26, 1959, which illustrates the kind of important function that these volunteer observers fulfill:

The help of cooperative weather observers to record the Nation's climate was started early in the last century, even before the Weather Bureau was established in 1891. Dozens of individuals who had been taking observations at scattered locations were urged by the new Weather Bureau to continue, and hundreds of additional citizens in all parts of the country and from all walks of life soon volunteered to make local weather observations and keep records of climatological data. More than 7,000 citizens now are taking weather observations without pay. The Weather Bureau furnishes observation instruments, such as rain gages and thermometers, and also supplies the record forms on which the observations are logged at least once daily. Observers are drawn from all ranks of life, and by their constant and faithful service have made available to all users an invaluable storehouse of weather data.

Each observer gives an average of about 15 minutes a day to take and record the observations, to answer numerous questions from neighbors in the community about the local weather, and to complete and mail the regular monthly reports. It is estimated that the total time contributed by each observer to the Government over a 50-year period amounts to about 600 8-hour workdays. The daily services of the thousands of voluntary observers would add up to about 80,000 full 8-hour days of work each year provided our citizens without cost.

In addition to the basic job of weather reporting, cooperative observers are occasionally invited to perform a wide variety of special reporting jobs. Some of these jobs in recent years include (a) reporting dates of the stages of development of various plants to assist in special agricultural studies, (b) telephoning special reports to designated collection centers to assist research work on the development and forecasting of tornadoes, and (c) reporting on the accuracy of weather forecasts.

I think we can take renewed inspiration from the high-minded and public-spirited contribution to the Nation that is being made every day by Mr. Oswald and Mr. Weber and by the some 7,000 other Americans who make this important contribution to our knowledge of the weather.

The "Politics" of the Arab Refugee Problem

EXTENSION OF REMARKS
OF
HON. JAMES ROOSEVELT
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 4, 1959

Mr. ROOSEVELT. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include for the interest and information of my colleagues, and others interested in a solution to the emotion-packed Arab refugee problem, an article entitled "Political Ambitions Above Human Needs."

This article appears in the 1959 winter-spring issue of a magazine entitled "Prevent World War III." It is published by the Society for the Prevention of World War III, Inc.

The article exposes the tactics of some Arab leaders in blocking an equitable and just solution of the Arab refugee problem to further their own political ambitions.

Another pertinent article on the Aswan Dam appears in this issue of the magazine and in the very near future I plan to insert the full text of this article for the perusal of those interested in this matter.

The aforementioned article follows:

POLITICAL AMBITIONS ABOVE HUMAN NEEDS

Ten years ago thousands of Arabs streamed out of Israel pushed on by the propaganda and threats of the Arab States which were attacking the Israelis. Thus, the Arab refugees problem was born. It is a tragedy which continues to plague the conscience of all men of good will.

The Arabs who found themselves part of the mass exodus were promised many things by the leaders of the Arab aggression. They soon found out that it was all a mirage, as they were left stranded in conditions of extreme destitution.

The plight of the Arab refugees has not been ignored by the United Nations. Through the United Nations Relief and Works Agency for Palestine (UNRWA) hundreds of thousands of refugees have been shielded from the horror of starvation. Each year a relatively handful of UN member states contribute financial aid to the operations of UNRWA. It is estimated that 70 percent of UNRWA's budget is made up of U.S. funds which have averaged about $22 million for the last 2 years.

While immediate relief is of the utmost necessity, its perpetuation indefinitely would doom the refugees to a life of stagnation. It is not as though there is no way out of this dilemma. Indeed, there are excellent and practical plans to rehabilitate these people so that they can make a positive contribution to the overall development of the Middle East.

There are many areas in the Middle East that could easily absorb the majority of these people and benefit from their labors. One would think that the Arab governments would be first to support these plans which would be a boon to their economies. Yet, it is precisely the Arab States which have shown an uncompromising hostility to every reasonable project.

It is a shocking fact—perhaps little known to most people including the refugees themselves—that the Arab States do not contribute 1 cent to UNRWA. On the contrary, the Arab States try to discredit and sabotage the workings of this United Nations agency which was specifically created to help the refugees. For example, in UNRWA's latest report, made by Mr. Leslie J. Carver, acting director of the UN agency, it is revealed that operations have been hampered by the continued withholding of permits to allow his international staff to enter the Gaza strip. The strip contains many Arab refugees, but their welfare is at the mercy of the Nasser regime which controls it and is responsible for the impeding of UNRWA's operations there.

The report discloses that redtape and restrictive regulations on the transport of relief goods between Lebanon, Jordan and the United Arab Republic have not only caused inexcusable delay but also an extra cost of more than $650,000. As reported by the New York Times (Oct. 23, 1958): "The acting director said no critical situation had arisen, but he maintained that the incidents constituted a challenge to the principles governing the operations of the United Nations agency and on occasion had hindered its effective functioning."

One would think that the objectivity of the report, its concern for the welfare of the refugees, and its plea for further financial help would evoke a measure of sympathy from the Arab leaders. The contrary seems to be the case. Indeed, in the United Arab Republic the report is derided. Radio Cairo seems almost gleeful when it noted that attempts to reabsorb the refugees in the economic life of the Middle East had not achieved any success. After sneering at UNRWA's efforts, the broadcast states: "Any attempt to limit the refugee problem to economic or social aspects is bound to have a hollow basis and can never attain any practical and useful results." And why not? What is more practical and useful than to afford these people the opportunity to participate in productive labor, to contribute to the building of the Arab countries, and to renew their spiritual and cultural lives? Radio Cairo evades this challenge by pretending that the refugee problem is "political."

Unquestionably a lasting solution of the refugee problem is tied up with the prospects for a political settlement in the Middle East. But such a settlement, if it is to bring peace and stability, must be on the basis of mutual respect for the sovereignty of all Arab States and Israel. This is exactly what the present Arab leadership wishes to avoid at all costs. To them, political settlement of the refugee problem is equivalent to the destruction of the State of Israel. This was emphasized by the U.N. spokesman for Saudi Arabia, Ahmed Shukairy. Mr. Shukairy bluntly told the U.N. Committee on Refugees that the U.N. had failed in its responsibilities toward the refugees. Therefore, he said, the only alternative was for "unilateral sanctions to be taken against Israel." These sanctions, he cried, would bring Israel "on her knees." To make clear what he meant by sanctions, Shukairy warned: "We are on the march, drawing nearer and nearer to our goals. All the fortresses left behind the retreating forces of imperialism are falling, one after the other, and Zionism is no exception.

"It shall surrender too, and the refugees shall return to their homeland and their homeland shall return to them."

This is not the first time that Shukairy has sounded the war cry against Israel and the West in the United Nations; but, beyond and above the attitude toward Israel, the so-called political solution, as defined by Mr. Shukairy, is nothing more than a plot to launch war in the Midle East with all its dire consequences for world peace. In the No. 51 issue of Prevent World War III we published an analysis entitled "The Tragedy of the Arab Refugees." The conclusion of the article deserves repeating: "From the foregoing it should be obvious that the Arab refugee problem is capable of solution provided that there is a sincere desire on the part of all concerned to reach agreement. But what shall we say when some who claim to speak for the refugees refuse to sit at the conference table and prefer to dedicate statues of soldiers pointing machineguns toward Israel? Only the combined efforts and good will of Arabs and Jews can put an end to this tragedy. The Israeli have always expressed a willingness to help in untangling this complex problem. It is clearly up to the Arab governments to show a similar attitude by word and by deed and to renounce the policy of exploiting these unfortunate people as pawns in their efforts to prevent peace in the Middle East."

The more we study the refugee problem the more we are convinced that the chief victims of the Arab invasion of Israel in 1948 turned out to be the Arabs who were induced to leave. They will remain the chief victims as long as Mr. Shukairy and his mentors continue to exploit their misery in the interest of selfish ambitions.

Ghana

EXTENSION OF REMARKS
OF
HON. ADAM C. POWELL
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 4, 1959

Mr. POWELL. Mr. Speaker, I wish to salute on the second anniversary of the independence of Ghana, March 6, the Prime Minister, His Excellency Kwame Nkrumah, and the country's Ambassador to the United States, His Excellency Daniel Chapman. There is added pride for us in the United States of America in the 2-year accomplishments of Ghana coast and more particularly to the command post of present-day Ghana. Although Ghana's population is little more than 5 million, inhabiting roughly only 91,843 square miles, its richness and its people have figured most prominently in the direction of the modern world. From the 15th century to the present, Ghana's gold or cocoa or bauxite or people have enriched the coffers of others. Ghana's gold and her human resources, beginning in the 16th century, laid the foundation of, first, the Portuguese, later the Dutch, English, Swedes, Danes, and still later the American economy. The influence of the Guinea coast and its impact upon America is seen every day in virtually one-tenth of the population of this great country. Add today to Ghana's continuing contribution of mineral resources and cocoa, and the impact of her descendants throughout the West, and a new story of Ghana's influence begins to unfold. In the span of 2 years Ghana has hostessed two major conferences where convened representatives from all parts of Africa in an effort to light the torch of liberation throughout Africa. Moreover, the leadership, the solidarity, the consciousness of the combined strength of all Africans for continent welfare and international peace has been asserted with such force that the whole universe world may experience the constructive impact of this small country a disordered world.

During Mr. Nkrumah's recent tour of India, Dr. Sarvapalli Radhakrishnan, the chancellor of Delhi University, when presenting the scroll of the university said:

I wish to assure you that you have our full support and sympathy in our attempts to build up a new United States of Africa.

To which Dr. Nkrumah responded:

Since Ghana became independent we have grown increasingly conscious that the responsibility for determining our own evolution as a community rests fully on our own shoulders. We are particularly aware of the need to develop our physical, intellectual, and spiritual resources in such a way that the contribution made by our generation and by our country is for the general progress of mankind.

We believe this contribution must be not only distinctly African in character but also international in its approach.

In an address to the Indian Council of World Affairs, Dr. Nkrumah said he had doubt that Africa would involve forms of government rather different from the traditional western pattern but no less democratic in their protection of the individual and his inalienable right.

To the criticism that Ghana has not proceeded in precisely the same way as old Western democracies, the Prime Minister informed the Indians that: "First, Ghana society is by its own form and tradition fundamentally democratic in character." And, he explained, that in time their present form of parliamentary democracy may be expected to conform more closely to their own national and traditional methods of government.

To the criticism by a section of the western press for so-called undemocratic methods Nkrumah retorted:

It would have been more helpful in creating better understanding if these critics had first carefully considered the reality of the situation. As a new and young Government, our first responsibility has been to preserve independence and the security of our state.

Commenting on the African liberalism movement and Ghana's role in it, Nkrumah explained that never before had so many African leaders from all parts of the continent come together to find a solution for their common problems as assembled in Accra when political and trade union leaders met there recently. And, he added, that the process for the total liberation of Africa has begun; the union of Ghana and Guinea, representing the first step along the momentous road toward African union. In this regard, the Prime Minister concluded:

We realize that our union may involve many difficult issues but the basic and decisive fact is that we are determined in spirit and endeavor to unite in order to form the nucleus for a union of African states or republics.

The recent meeting of Nkrumah with Indian leaders has added significance for it symbolizes the realization of Asian and African struggle for a common cause. It denotes a breaking through of African nationalism and a seeking of unity and solidarity with others for international good will. For, as the Prime Minister stated, Ghana shares India's own ideals and aspirations and looks forward to working on solutions for their basic problems. This is continuation of the true meaning of the spirit born in Bandung at the Afro-Asian conference in 1955.

As the whole world totters on the brink of disaster, it is well that the big powers lend a greater ear to the misgivings of the little powers. Maybe there can be found in some cases where we have gone wrong. As for Americans, Dr. William Appleman Williams in his new book, "The Tragedy of American Diplomacy," contends that "the idea that other people ought to copy America contradicts the humanitarian urge to help them and the idea that they have the right to make such key decisions for themselves * * * in some cases the American way does not work for other people." Bearing in mind Dr. Williams conclusion that other societies come to feel that American policy causes them to lose their economic as well as their political right of self-determination, we must periodically take time to understand the motivations and aspirations of others especially the members of the popularly known Asian-African bloc. Time thus spent can be highly rewarding in terms of good will and human survival. We must listen and hear with sympathy what the smaller countries are trying to tell us for they wish like us to be spared an atomic holocaust.

In conclusion, a message from the African tradition, a proverb, which Prime Minister Nkrumah included in the foreword to Barbara Ward's new book, "Five Ideas That Change the World," is appropriate:

When the bull elephants fight, the grass is trampled down and pleads with the small and uncommitted nations to make their voices heard constructively while there is still time, for in this age of the ultimate weapon the bull elephants would disappear with the grass.

ACHIEVEMENT IN GHANA SINCE THE CELEBRATION OF FIRST ANNIVERSARY OF INDEPENDENCE, 1958

POLITICAL

1. Opening of new diplomatic missions abroad and in Ghana by other countries.
2. Represented at:
(a) Geneva International Conference on the Law of the Sea.
(b) Second Geneva Atoms for Peace Conference.
(c) U.N. Conference on Peaceful Uses of Atomic Energy.
(d) Inauguration of West Indies Federal Legislature.
3. Visits by Prime Minister to:
(a) Independent African States.
(b) Canada and the United States.
(c) India.
(d) Nigeria.
4. His Excellency Ambassador D. A. Chapman elected first Vice Chairman of Governing Council of new U.N. Special Fund.
5. Establishment of:
(a) Regional assemblies.
(b) Houses of chiefs primarily concerned with questions of customary law.
6. Arranged:
(a) Conference of Independent African States.
(b) All-African People's Conference.
7. Union with Guinea to form basis of Union of West African States.
8. Contribution of $3,000 to the programs of the United Nations High Commissioner for refugees.
9. Presentation of a Speaker's chair to the National Assembly by the British House of Commons.

ECONOMIC

1. Venue of First Regional Conference of Food and Agricultural Organization of the United Nations.
2. Trade and goodwill missions to Britain and Western Europe.
3. Trade missions from:
(a) The Netherlands.
(b) Czechoslovakia.
(c) Italy.
(d) West and East Germany.
(e) Poland.
4. Establishment of state lotteries.
5. Issue of own coinage to replace former West African currency.
6. Article of agreement signed with International Finance Corporation.
7. Establishment of:
(a) Tourist bureau.
(b) Committee on Aid to Ghanaian Business.
(c) Insecticide factory.
(d) Commercial vehicles assembly plant.
(e) Nautical college for training of ships' officers and ratings; Ghanaians also being trained as seamen.
(f) Investment promotion board.
(g) Food and Agricultural Organization Regional Office for Africa.
(h) ICA operation mission.
(f) Rockefeller Brothers' Fund to help obtain investment funds and financial assistance for economic development.
(j) Bankers' clearinghouse.
8. Plan to develop Accra Airport to international standards.
9. Formation of iron and steel mill.
10. Modernization of fishing industry.
11. Formal inauguration of Ghana airways, and plans for creation of completely jet-powered airfleet.
12. Training of Ghanaians to become air hostesses.
13. Visit by team of experts from Henry J. Kaiser Co. to make survey and bring up-to-date engineering report on Volta River project. Maine factors of scheme: Dam the Volta, produce 600,000 kilowatts capacity and smelt 210,000 tons of aluminum yearly from Ghana bauxite.
14. Revision of company law for speedy development.
15. Signing of investment guarantee agreement to attract private American capital to Ghana.
16. Scheme for establishment of oil mill factory.
17. Represented at:
(a) First session of U.N. Economic Commission for Africa at Addis Ababa.
(b) Forty-first (Maritime) session of International Labor Conference in Geneva.
(c) Conference of International Federation of Agricultural Producers in Brussels.
(d) Montreal Commonwealth Trade and Economic Conference.
(e) New Delhi talks of World Bank and International Monetary Fund.
18. Formation of Ghana National Construction Co. for building factories, carrying out construction works, and training of Ghanaians.
19. Study progress of Tema Harbor, one of the major harbors of Africa.
20. New trade union structure to (a) help develop the country, (b) train the workers to contribute to this development.
21. Preparation of a second development plan which will mark an important step forward in the further development and consolidation of the independence of the country.

SOCIAL

1. Represented at (a) Commonwealth games in Montreal, (b) Conference of Afro-Asian writers in Tashkent in Soviet Union, (c) World Assembly of Youth in New Delhi.
2. Debut of (a) Ghana Times (daily newspaper), (b) the Ghanaian (monthly magazine).
3. Increased operations of Ghana News Agency which receives and distributes domestic and overseas news to various news organizations in Ghana.
4. Opening of (a) police college for advanced training for police officers, (b) law school, (c) school of journalism.
5. Admission to (a) full membership of UNESCO, (b) membership of International Criminal Police Organization.
6. Arts and crafts exhibitions to develop distinctive Ghanaian culture.
7. Agricultural shows to increase number and variety of crops and the flourish of livestock industry.
8. Training of Ghanaians to become officers in Ghana's Army.
9. Plans (a) to enable Radio-Ghana to cover the whole of Africa, (b) for establishment of medical school, (c) for inauguration of television service, (d) to establish an arts council.
10. More towns connected by new VHF radio-telephone link.
11. Visits by Ghanaians to the United States under various forms of grants.
12. Statue of Prime Minister added to others in Madame Tussaud's exhibition in London.
13. Installation of new automatic street lights.
14. Represented at:
(a) World Health Assembly in Minneapolis.
(b) Sixth International Congress on Tropical Medicine and Malaria in Lisbon.
(c) International Conference on Organization of Community Development in Tripoli.
(d) Sixth Meeting of International Scientific Committee for Trypanosomiasis Research in Brussels.
(e) Eighth International Students' Conference in Peru.
15. Ghana Film Unit Productions shown at Film Festival in Russia.
16. Issue of special stamps commemorating 150th birthday anniversary of Abraham Lincoln.

17. Assistance by WHO and UNICEF in battle against diseases.
18. Opening of new blind vocational training center.
19. Extension to supplies of water, electricity, railways, telephone, medical supplies, and other services to many parts of the country.
20. Construction of bridges, trunk and feeder roads.
21. Venue of International Rally of Girl Scouts.
22. New policy to enable more people to own houses.
23. Provision of primary schooling for all who wanted it.
24. Expansion of middle (similar to junior high) school system.
25. Increase in enrollments in secondary schools.
26. Improvement in existing teacher training colleges.
27. New buildings at university college and college of technology.
28. Award of local and overseas scholarships.
29. Receipt of several offers of scholarships from other countries to commemorate attainment of independence.
30. Recognition of Ghana Red Cross Society by International Committee of Red Cross Societies in Geneva.
31. Furthering of new and better ways of rural life in raising of living standards through community development.

Address by Charles Abrams Upon Presentation of the Queens County Jewish War Veterans Award

EXTENSION OF REMARKS
OF
HON. LESTER HOLTZMAN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 4, 1959

Mr. HOLTZMAN. Mr. Speaker, last year I was privileged to share a speakers platform with two distinguished Americans, Mr. Charles Abrams, then chairman of the New York State Commission Against Discrimination, and Mr. Roy Wilkins, executive secretary to the National Association for the Advancement of Colored People. The occasion was the presentation of an award to Mr. Wilkins by the Queens County Jewish War Veterans, a truly American organization completely dedicated to the interests of all our citizens.

Commissioner Abrams delivered a stirring and inspiring speech in making the formal presentation to Mr. Wilkins which I commend for reading to my colleagues:

REMARKS BY CHARLES ABRAMS, CHAIRMAN OF THE NEW YORK STATE COMMISSION AGAINST DISCRIMINATION, UPON PRESENTATION OF THE QUEENS COUNTY JEWISH WAR VETERANS AWARD TO ROY WILKENS ON APRIL 19, 1958

The man whom we have assembled here to honor is unique. He is what is called a crusader. A crusader is not a popular creature. For a crusader has a cross to bear. Not with the sword today, but with the word. And a crusader is not popular in our time or at any time because he carries a message which many people do not like and in which they do not yet believe.

His, moreover, is a peculiar crusade because what he preaches is not treason, but reason; not heresy but truth; not iconoclasm but justice; not conformity under force but equality under law. Yet it is one of the anomalies of our time that democracy is still a heresy in many parts of America and that his crusade still is unpopular in many parts of America.

The gospel of equality rooted in Christian antiquity is still denied by many who insist that the equality must remain an abstraction. Some States have in fact actually nullified it by statute. They reject the courts that have reaffirmed the principle and defy the Government to implement it. In the process a land of the law finds it difficult to carry out the law of the land. The force of law has too often had to yield to the law of force. Neither persuasion nor judicial mandate have as yet been able to fulfill the Constitution under which we live. Equality in America thus continues to remain a visionary notion, a goal of some rather than a reality for all. It is, therefore, important that we understand what his crusade is about. For it is not only the Negro for whom he carries the torch, but for us. In our time intolerance has reaped its toll in many forms—against 6 million Jewish lives in Germany in the form of anti-Semitic intolerance; against a million Moslem and Hindu lives in Pakistan and India because of religious intolerance; against millions of Russian farmers lives because of political intolerance; against African majorities and white minorities because of color intolerance.

Unless intolerance disappears from the world no minority is safe; no members of the majority today can feel secure against being segmented into victimized minorities tomorrow. For intolerance is epidemic and once loosed, may spread to embrace an increasing area of victims.

We have lived and felt secure in our time only because we know that the law which protects the gentile protects the Jew, that the courts that shield the white shield the black. But morality and law must be linked if democracy is to function. For once the morality which undergirds the law is compromised, then tyranny takes over, whether it be the tyranny of a numerical majority or of a political minority. The Jew in Germany was not the victim of lawlessness for it was lawful to kill him, he was the victim of immorality under law. The Moslem and Hindu on the other hand were the victims of lawlessness though in their own way they thought they were simply carrying out what they saw as a moral principle of indiscriminately taking eyes for eyes and lives for lives. Law and morality are therefore indivisible. And the crusade this man wages is for both. It is a crusade for the preservation of the Judaic-Christian faith and justice as well as for moral law under a moral constitution.

When we honor him here, it is not for the service he renders to himself or to his race but to mankind. And his must remain a lonely course through the ever-winding abyss of bigotry and ignorance. I know the pains and the heartaches of his struggle. I know its dangers, for the resistance is not met only with grimaces but sometimes with burning crosses and dynamite. I know too that the crusader's greatest frustrations occur when he knows that those who should be standing at his side remain aloof and indifferent.

And so when we lift our eyes to the fighter for justice, when we give him our hand and our tribute, it is with renewed courage that he moves on with his work and with fresh faith renews his efforts toward the horizons under which we want our children to live.

It is because we know that his is our battle too and our stake that we give him this our humble tribute, as a token of our affection, a symbol of our respect, and in grateful recognition of the great task to which he has dedicated his life.

Maritime Unions Seek Destruction of Our Merchant Marine Fleet

EXTENSION OF REMARKS
OF
HON. JOHN TABER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 4, 1959

Mr. TABER. Mr. Speaker, the National Maritime Union, headed by Joseph Curran, and the International Seafarers Union, headed by Paul Hall, are waging a propaganda campaign designed to destroy a vital portion of our merchant marine fleet.

Our citizens now have approximately 1,500 oil tankers, ore carriers, and tramp steamers flying the flags of Panama, Liberia, and Honduras. These are American-owned ships and they receive no subsidy from the United States Government. These ships are called flags of necessity ships; that is, it is necessary to fly under these flags if they are to survive. They simply could not fly under the American flag where seamen would be organized and receive wages 3 and even 4 times higher than wages paid to seamen flying under the flags of Western European maritime countries.

The Federal Government already is spending $130 million in annual subsidies to seamen who sail under the American flag. American ship owners do not get a dime out of this. I certainly have no quarrel with this expenditure. It is money well spent and necessary if we want any kind of a healthy and strong merchant marine.

Messrs. Curran and Hall want the flags of necessity ships returned to the American flag. They have a selfish motive in pressing for this radical change in our merchant marine policy. They want more dues-paying members in their unions.

Flags of necessity ships have received the enthusiastic endorsement of the Congress through passage of the Shipping Act of 1916, the Defense Department, and Federal Maritime Administrator Clarence G. Morse. The Congress gave Mr. Morse the authority to transfer these ships to the flags of Panama, Honduras, and Liberia, and only the Congress can take away that authority.

If, perchance, we changed our merchant marine policy and returned these flags of necessity ships to the United States flag, the Federal Government would be saddled with an additional four or five hundred million dollars in annual subsidies to these seamen, because, as I said, these ships cannot possibly compete with low-paid Western European seamen without the subsidy.

We have effective control over these flags of necessity ships. They are doing a great job and they are not asking a dime from the Federal Government. They came to our rescue during the Korean conflict, and they will be available to our Government tomorrow if an emergency should arise.

Of course, if Mr. Curran and Mr. Hall persist in their violent and unfounded attacks on the flags of necessity ship

owners, the owners will sell these ships to Great Britain, Norway, or the Dutch. That would be disastrous to our national security. I am not concerned one bit about the profits or losses of these ships, but I am concerned about our national defense and the added burden to the taxpayer if these ships ever should be returned to the American flag.

If flags of necessity ships were sold abroad I do not see how Mr. Curran or Mr. Hall would gain anything. I strongly doubt that these men are thinking in terms of the consequences of their propaganda campaign. They would gain nothing and the United States would lose a lot along the national security and economy front.

Freedom of the Press Does Not Mean License To Brainwash

EXTENSION OF REMARKS
OF
HON. LESTER R. JOHNSON
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 11, 1959

Mr. JOHNSON of Wisconsin. Mr. Speaker, freedom of the press is one of our cherished rights but, like all of our rights, it carries a responsibility. The printed word is a powerful weapon. It should not be used to brainwash the public.

Through misleading and downright slanderous advertising in national magazines, the public service electric companies are attempting to brainwash the people of the United States. These ads use pictures of children and even the Holy Bible in a campaign of vilification against two programs that have proven their worth to this country—the public power program and the rural electrification movement. Such advertising is a disgrace to America and to American journalism.

I have just received a letter from Alex Radin, general manager of the American Public Power Association. In his letter, Mr. Radin takes the latest of these power company ads and refutes its statements, one by one. Under leave to extend my remarks, I would like to include this letter in the RECORD:

DEAR CONGRESSMAN JOHNSON: For the past few years we have noted with concern the false or misleading advertising which has been carried in a number of national magazines and other media under the sponsorship of the Electric Power Companies Advertising Program (ECAP). One of the most recent ads in this series was so outrageous that we feel it should not stand without a reply.

The advertisement says, "The promoters of Federal Government public power are trying to get their hands on more of your tax money." This characterization of Federal power programs is completely contrary to fact; under the laws written by Congress, every cent invested in Federal power projects is being repaid, with interest or equivalent.

In the same vein, the advertisement charges that $5.5 billion is "the amount of tax money already spent on Federal public power." It is patently ridiculous to label the Nation's investment over several decades in the development of electric power facilities in conjunction with natural resource development programs as money spent. This failure to distinguish between moneys spent and invested comes with ill grace from an industry financed by billions of dollars of invested capital.

The figure of $5.5 billion is not substantiated in any way in the advertisement, nor does it appear susceptible to any factual explanation. The total investment in Federal power programs is reliably estimated at closer to $3 billion.

The advertisement continues: "The lobbyists and pressure groups who promote public power are pushing the idea that Congress should spend $10 billion more on this costly program, to be collected from you and other Americans, of course. (This $10 billion must be assumed to be another Madison Avenue straw man.)

The reference to "lobbyists and pressure groups who promote public power" is an insult not only to groups such as the American Public Power Association, which advocate orderly Federal development of our natural resources including power, but also to millions of Americans of both major political parties, who over the past half century have supported Federal programs for resource development.

No less insulting is the implication that the Congress authorizes such programs at the insistence of "lobbyists and pressure groups." Savings of lives and millions of dollars from flood control and the economic gains from thousands of miles of navigable streams, irrigation, countless recreational opportunities and the production of billions of kilowatt-hours of electric energy—the fruits of our Federal water resources development program—are a tribute to the wisdom and foresight of many Members of the Congress. To suggest that great Americans of the past and present—Norris, McNary, Rayburn, and Hill, for example—fought for maximum comprehensive and beneficial development of water resources because of the urgings of lobbyists and pressure groups not only taxes credulity but represents the grossest sort of slander.

The advertisement contends that investments in Federal power are "all so unnecessary" because "America's many independent electric companies are able—and ready—to supply all the electricity the Nation needs—without your tax money."

That many of the greatest power developments in the country would not have been developed if the Federal Government had not done the job is a matter of record. The power companies once thought it all so unnecessary when the Tennessee and Columbia Rivers were harnessed by the Federal Government, yet projects constructed over the protests of the power companies were crucial factors in our national strength during the blackest hours of World War II. History demonstrates that complete reliance upon private monopoly to develop our power resources will jeopardize orderly progress—and perhaps even survival.

That the electric companies function without your tax money is open to serious question. Under sections 167 and 168 of the Internal Revenue Act of 1954, the privately owned electric utilities collect each year from their ratepayers millions of dollars in the name of taxes which are not paid as taxes. These funds, according to the Federal Power Commission, are equivalent to interest-free loans; their benefits will run into billions of dollars.

This advertisement is only one flagrant example of the campaign being waged against the public interest by the power companies with the electric consumers' dollars. Pictures of children and even of the Holy Bible have been invoked in advertising attacking Federal power programs.

We do not believe that such calumny is proper for public utilities. The Public Utilities Holding Company Act of 1935 was enacted by the Congress following revelations that related not only to financial abuses by power companies and utility holding companies but also to "educational" programs of the utilities and their efforts to "mold public opinion." (The latter phrase has been used by one medium to describe the purpose of the ECAP advertisements.)

While we do not question the right of private power companies to express opinions and oppose public power programs, we cannot believe that this freedom offers any license for a mass conspiracy by monopoly to brainwash the American people on the facts about an essential service.

The nature of these advertisements is such that, in our opinion, the Congress should inquire into their propriety. The present ECAP advertising is reminiscent of the propaganda campaigns which were exposed in the utility investigations by Congress and the Federal Trade Commission a quarter of a century ago. We urge the Congress to launch a new investigation, reviewing the effectiveness of the Holding Company Act in dealing with monopoly abuses in the electric power field and inquiring into the need for additional legislation to protect the public from what Theodore Roosevelt aptly described as "a monopoly far more powerful * * * than anything known to our experience."

Sincerely,

ALEX RADIN.

Challenge in Science

EXTENSION OF REMARKS
OF
HON. JOHN W. McCORMACK
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 4, 1959

Mr. McCORMACK. Mr. Speaker, under leave to revise and extend my remarks I am including herein an article from the Wall Street Journal of March 2, 1959 entitled "Challenge in Science." This article forcefully indicates the danger of the United States in losing its overall scientific leadership within the next decade. In the CONGRESSIONAL RECORD of March 2, 1959, page A-1611, Mr. Speaker, I included a statement of Secretary of Health, Education, and Welfare indicating the failure of our agencies to utilize useful, necessary and available scientific items for the furtherance of scientific programs in our educational institutions. This situation to my mind is indefensible and calls for speedy remedy by those charged with responsibility under existing law.

The article follows:

CHALLENGE IN SCIENCE—RUSSIA SPURS RESEARCH, THREATENS TO SURPASS THE UNITED STATES IN 10 YEARS—SCIENTISTS SAY RACE IS CLOSE IN MATH, PHYSICS BUT REDS LAG IN MEDICINE, CHEMISTRY—MONEY HELPS, MARXISM HURTS

(By John D. Williams)

Despite Russia's eye-catching space feats, the United States, on balance, still ranks No. 1 in science. But the Reds, who got a late start, are advancing rapidly. In some limited areas, their scientific research tops that of the United States—in quality as well as in quantity. In the key fields of mathematics and physics the race is close. Considering Russia's accelerating pace in research and the Russians' intense motivation

to overtake Americans on all fronts, the United States is in danger of losing its overall science leadership within 10 years.

This sobering balance sheet and outlook on the comparative status of scientific progress in Russia and the United States summarizes interviews with nearly 50 top U.S. scientists, along with the findings of several private and Government scientific groups. Most of the scientists recently have visited Russian laboratories and are acquainted, through first-hand observations or the studying of Soviet scientific journals, with the work of their Russian counterparts.

It should be noted quickly that most scientists are reluctant to give any overall scorecard rating of science on a nationalistic basis. "We're not engaged in a world series of science," snaps one physicist. Dr. Norbert Wiener, a leading U.S. mathematician, says, "I don't like the word 'lead.' It's not a game, after all. It's a matter of individuals."

SCIENCE SUPREMACY AT STAKE

Despite these reservations, however, there's no doubt that the United States and the U.S.S.R. are engaged in a race for supremacy in science. The competition is as real as that on other cold war fronts, whether economic, military or propaganda. And the stakes are as high, if not higher, because advances in science are basic to progress on other fronts. Whether for good or for evil, the fortunes of people in most countries nowadays are closely linked with research in everything from astronomy and atomic physics to meteorology and zoology.

Sputniks, Mechta, and Khrushchev's missile-rattling notwithstanding, Russian scientists are not 10 feet tall, nor have they already relegated the United States to a position as a second-rate scientific power. "We oscillate in our thinking of them as either peasants or supermen," says Anthony Oettinger, assistant professor of linguistics and applied mathematics at Harvard University. Nearly all U.S. scientists interviewed agreed the Russians are good—but so are U.S. scientists. American researchers caution that secrecy and a lack of complete information makes an overall appraisal difficult. "There is a difficulty in knowing, but everybody is convinced it's better not to underestimate these guys," says one researcher.

"My impression is that when it comes to specific items of technology where the Russians decide to go all out, they can give us some good competition, and in isolated areas can surpass us," says a top Washington scientist. "But overall," he adds, "the quality of their work doesn't measure up to ours. I haven't seen or read anything that makes me say, 'Gee whiz.'"

ALARMED AT SOVIET PACE

But many U.S. scientists are amazed, and somewhat alarmed, by the quickening pace of Russian research, the intense drive of Soviet scientists and the Kremlin's lid-off-the-money-box approach to wresting leadership in science from the United States and the West. Unless the United States greatly accelerates its efforts, they argue, Russia's present pace could give Moscow overall supremacy in science by 1970 or earlier. And recent history shows Russia is capable of turning basic research into working hardware with amazing speed; for example, the U.S.S.R. came up with the hydrogen bomb, supersonic aircraft, ballistic missiles and space vehicles much sooner than had been expected by many U.S. scientists.

"The scary thing is the Russians' big interest in science now," says John D. Turkevich, a Princeton University chemistry professor who has translated scores of Russian scientific works. Although Professor Turkevich doesn't know of any major scientific field where Russia now leads, he adds: "Where they are ahead is in planning and in utilizing the scientific results obtained in the West more efficiently than we do. And they have a higher appreciation of the role of science for their future development than we do. They've got drive."

"They've been coming up faster than we have," says Prof. John Chipman, head of the department of metallurgy at Massachusetts Institute of Technology (M.I.T.). "The point about the future is that they are turning out more scientists than we and you can draw your own conclusions from that." After a 3-week visit in Russia, Dr. Leon Trilling, associate professor of aeronautical engineering at M.I.T., was "impressed by the dedicated way they work at their jobs. It makes one stop and worry a bit. I feel sure from what we've seen that they are able to do anything they set out to do."

SCIENTISTS, NOT POLITICIANS, HOLD SWAY

Since the first sputnik soared aloft (October 4, 1957), Government officials and American scientists, often supported financially by the National Science Foundation, have been trying busily to learn how good Russian science is and what accounts for its high and low spots. Among other things, they're impressed that the top administrators in Russian research institutes and in the U.S.S.R. Academy of Sciences are scientists, not politicians. These leaders, called academicians, eye the whole broad terrain of science and have much to say about where research money will be spent and where scientific manpower will be concentrated.

American scientists also are impressed by Russia's lavish spending on research and development and the country's huge education program in science and engineering. Russia's new 7-year plan calls for a 90 percent increase in the number of engineering graduates alone. The U.S.S.R. already claims to be graduating about 80,000 engineers annually, compared with about 30,000 yearly in the United States.

HARD TEAM TO BEAT

"They have talented scientists and unlimited funds—a hard team to beat. I feel that we have the talent but not the money," says a California scientist. Speaking of his own field, Dr. Maurice Ewing, an eminent geophysicist at Columbia University, says: "They're catching up at a tremendous rate and their national effort is six times ours. They find funds more readily available. I spend 85 percent of my time trying to get funds."

Soviet advances in science reflect, on part, the single-mindedness which a monolithic state such as Russia can bring to bear in any area. Like all other endeavors in the Soviet Union, science has its own state plans which muster great resources to work on specific problems. Major assignment for the next 7 years: Finding ways to control thermonuclear reactions to harness the power of the hydrogen bomb for peaceful energy. Says an American scientist who has visited Russian science centers: "You get the impression that everything over there is either a priority project or a no-priority project." Of course, state control of science can boomerang. For example, some sciences, especially biology, have been hamstrung in Russia by the necessity of squaring them with Marxist dogma which implies that man is capable of being made perfect.

Here is how Russia and the United States compare in many fields of science and technology:

Astronomy

"The Russians remain weaker than we are in astronomy because they don't have the equipment we do," says Dr. Fred L. Whipple, Harvard astronomy professor who visited the U.S.S.R. not long ago. We have about 40 observatories, double Russia's total. Russia's largest telescope is a 50-inch reflector model taken from the Germans after World War II. The United States has at least three telescopes over 100 inches in diameter. But this year the Soviet Union will complete a 104-inch reflector for the Crimean Astrophysical Observatory at Partizanskoye. And there are reports they have a 15-year project for a 236-inch telescope, larger than our giant 200-inch Mount Palomar instrument in California.

U.S. astronomers discover more celestial bodies, thanks in large part to their superior and more plentiful facilities. Their Russian colleagues appear to spend more time recording motions and positions of stars, the sort of routine astronomy that occupied Western astronomers a good deal more in the 19th century than today. The Russian concentration in celestial mechanics pays off with information needed to chart rocket courses to the moon and planets. U.S. space researchers, jarred by such Soviet space feats as Mechta, fret at our lag in this currently important field.

The United States is stronger in astrophysic studies that delve into the very nature of stars and stimulate advances in atomic physics. In the relatively new field of radio astronomy, which the United States pioneered, both countries are spurring work to catch up to Britain. Radio telescopes "see" further into the universe than do optical instruments because they detect radiations of wavelengths far greater than those of visible light. Thus, radio astronomy promises important discoveries about the universe.

Concludes Dr. Harlow Shapley at the Harvard College observatory: "There is no question that we lead in astronomy. But you have to put Russia down as second. They are good, ambitious, and enthusiastic, and they feel we are to be caught up with."

Biology

The United States has a commanding lead in most branches of this science dealing with all living organisms. Politics have poisoned much Russian work. Take genetics, the branch dealing with heredity, and the current darling of the biological field. The politics of Marxism pressured Red scientists to ignore Mendel's laws of genetics, which, in simple terms, show that such physical characteristics as height and color of eyes depend on the combination of elementary cell units that has been inherited. Trofin Lysenko, a Red plant breeder, with Stalin's backing, led the repression of the valid proofs of such laws in addition to resisting Darwin's evolution theory.

Lysenko proclaimed—wrongly, according to most Western scientists—that acquired characteristics can be passed on through succeeding generations. That is, a dexterous juggler spawns another dexterous juggler and—most important to Marxism—a "good" Communist spawns a "good" Communist. Anti-Lysenko geneticists long were persecuted and purged in Russia, the climax coming in 1948. In the post-Stalin era of Soviet science, Lysenko was thought to be discredited. But Lysenkoism apparently is resurgent. Last August the Soviet Government canceled, at the last minute, visas of a group of anti-Lysenko scientists who had planned to attend the International Congress of Geneticists at Montreal.

In general, U.S. biologists are not greatly impressed by known Russian work in botany (plants), zoology (animals), paleontology (fosils), and entomology (insects). But there are increasing signs Soviet researchers are stepping up studies of flora and fauna.

In zoology, contends one American scientist, Soviet scientists have been too little influenced by Darwin and too much influenced by Ivan Pavlov, a Russian Nobel prize winner who did original work on conditioned reflexes in animals. (In Pavlov's famed experiment a dog was trained to secrete saliva when a bell rang, even though food, which had been presented when the bell rang in the early part of the experiment, was absent.) Says the U.S. scientist: "If I were to write

a book on evolution, I'm sure there wouldn't be a single Russian in the bibliography."

Chemistry

Overall, the United States holds a clear lead. Russian researchers were slow in realizing the value of petroleum and natural gas in compounding new industrial chemicals; they leaned too long on alcohol as the prime source.

But in the hottest current chemical research—on polymers from which new plastics and fibers are being made—"they've come up with the same type of material on the same time schedule as we have," says a chemist. On a recent trip to Russia, one U.S. chemist saw "tubs full" of polypropylene, a plastic material only recently introduced to the U.S. market and first developed in Italy. Russian research reportedly concentrates more than ours on polymers for plastics to withstand extremely high temperatures.

In the vast domain of chemistry, Russia has other specialties. For example, they lead in work on chemical reactions in explosions.

In biochemistry—dealing with living organisms—Russia is well behind the United States and other western nations in the development of drugs. Not one major antibiotic, hormone, or vitamin developed in the past 15 years carries a Russian credit line. "The reason is quite simple," says John T. Connor, president of Merck & Co., Inc., a major U.S. drugmaker. "Moscow found that it was far less costly to pirate western drugs than to discover and develop their own." One U.S. scientist relates how, he recently sent a diabetic Russian colleague the latest type of insulin, which has not yet been compounded in Russia.

A team of U.S. medical observers which visited Russian drug research centers last year noted that the quality of U.S.S.R drug synthesis was equal to the West's but added that quantitatively, the Russians are considerably behind us. For example, while in the West a single medicinal chemical laboratory might synthesize 50 or 100 compounds for evaluation to find the optimal therapeutic agent, a comparable Russian pharmaceutical research institute will synthesize only 5 or 10.

Russian scientists were slow in getting around to vaccines, but their work since World War II generally is considered good—and in some applications, ahead of U.S. efforts. Within the past 2 years Russia has begun using live virus vaccines to help prevent such diseases as mumps, influenza, and measles, as well as polio. Live virus vaccines give longer lasting immunity than the dead types. We have only a live virus polio vaccine under test and we have no live virus vaccines for mumps or influenza. However, in production of polio vaccine, Russia is estimated to be 3 years behind the United States.

Medicine

Russia may trail the United States by as much as 10 years in medical research, claim knowledgable Americans. But a team of medical observers, reporting in the Journal of the American Medical Association, says Russia is making a determined effort to bring its medical research up to the level of its programs in the physical sciences.

Russia has more doctors than the United States but, in general, they're not as good. For the past 15 years Russia has been adding roughly 10,000 new physicians a year, about double the U.S. total. They have some 16 doctors per 10,000 people, compared with our 13. Three out of four of their doctors are women, hardly startling when one considers that nearly half of all Soviet workers are female. Russian doctors receive less training and are backed by poorer facilities and fewer drugs. Nevertheless, they can claim much credit for cutting Russia's mortality rate about 75 percent since the 1917 revolution. Kremlin health officials in 1956 claimed a Russian had a life expectancy at birth of 67 years, compared with 69.5 years for an American.

Mentally disturbed Russians have a tougher time getting therapy than do Americans. There are fewer hospital beds for Russian mental patients and they have only about 4,500 psychiatrists, compared with 10,000 in the United States. "The Russians claim they have less mental illness than we do, but there is no proof of this," says a U.S. authority. "They claim their world outlook is better than ours because they do not have competition which, they feel, erroneously, drives men mad." But Russians use more tranquilizers than Americans, chiefly because they are used as general pain killers.

One top Government expert in infectious diseases believes that Russia may surpass the United States in preventive medicine by pirating and applying on a wide scale our basic research. Other American researchers content that Western science owes it to itself to pay more attention to Russian experimentation. Among Red experiments that intrigue U.S. scientists are those in primate biology and in transplanting a dog's head from one body to another. And they have claimed that transplants of human hearts are theoretically possible, although U.S. researchers say crucial problems have yet to be solved in this field.

Mathematics

The United States still has a tenuous overall leadership, but Russians have made more major contributions to this basic science than to any other and their challenge is serious. American mathematicians claim our work is tops in such branches as pure algebra, algebraic geometry, statistics, the calculus of variations and topology, the qualitative study of geometric figures.

But in some other important fields of math, we can learn from the Russians. Take the field of nonlinear differential equations—a branch of advanced mathematics essential in controlling the guidance of a space vehicle. It would take us years to catch up to Russia in this complex field, argues one U.S. mathematician.

Alarmed by Soviet space guidance feats, which rely heavily on such advanced mathematics, 15 top U.S. mathematicians are investigating the state of this field in the United States at a research subsidiary of Martin Co. in Baltimore. Undoubtedly on the agenda is a study of 10 Soviet books on advanced differential equations; the United States has published only a couple.

"The Russians have an old mathematical tradition going back to the end of the 18th century," explains Dr. Wiener, an M.I.T. mathematician. "The quality of their work in those days was good. Now they have more men and the quality is still very good. And their secondary school mathematics education is better than ours." Moscow is considered the most important single center for mathematics in the world, although the United States has a greater number of mathematics research centers.

To help keep abreast of Soviet mathematics, a group at the University of Michigan is compiling a Russian-English mathematics dictionary. "Russian has overtaken French and is crowding German as the scientific language, particularly in theoretical applied mathematics," says Dr. A. J. Lohwater, director of the project.

In applied mathematics, the United States leads in such areas as automatic language translating, using high-speed computers. Electronic translation equipment can greatly speed scientific research. At least six U.S. universities are now using computers for translating, including Russian into English. Although this work is described as still rather crude, researchers expect it to be very useful within 5 years. Russia's theoretical work on machine translations is considered excellent, but its scientists have done far less actual electronic translating.

The main reason for Russia's lag in this work lies in their computers (BESM and Stela), which do not equal the capacity (operations per second) of U.S. machines.

In the field of measurement, Soviet activities are intense and their claims are many. Dr. Allen V. Astin, Director of the National Bureau of Standards in Washington, has given an example of Russia's challenge in this field:

"Their national standardizing organization has claimed an ability to make regular calibration of temperature-measuring devices up to 6,000 degrees centigrade and their scientific plans call for increasing this calibration competence so that by 1960 they will provide this calibration service up to 12,000 degrees. At the National Bureau of Standards, our regular practice in making direct high-temperature calibrations extends to 2,800 degrees which we usually certify to an accuracy of 8 degrees. On a very limited basis we are able to extrapolate our high-temperature calibrations to 4,000 degrees centigrade, but with some sacrifice of accuracy," reports Dr. Astin.

Physics

"Everything they know we know. They have good men, but not as many as we do," sums up a leading U.S. physicist. Despite the overall leadership of the United States, the race is fierce in certain areas, such as nuclear research. Russians have made some remarkable additions to world knowledge in physics. For example, last year Russian physicists Pavel A. Cherenkov, Igor I. Tamm and Ilya M. Frank were awarded Nobel prizes for their work on certain radiation waves. (Since 1904 only six Russians have won Nobel prizes in physics, chemistry, medicine and physiology, while 47 U.S. citizens have won these coveted awards.)

To advance its studies of matter, Russia has a 10-billion-volt accelerator cyclotron, the world's largest atom smasher. The biggest machine now operating in the United States is the 6-billion-volt synchrotron at the University of California. But a battle of bigness is raging in atom smashers, because larger machines allow scientists to probe deeper into the atom. The United States may step ahead next year upon completion of a 25-billion-volt machine at Brookhaven National Laboratory on Long Island. And the Government's science advisers are urging expenditure of $127 million for a giant atom smasher that could achieve extremely high energies ranging up to 45 billion volts. Not to be outdone, the Russians are talking of a 50-billion-volt machine.

There is no evidence that the Russians have been working any longer—or any more successfully—than the United States and Britain in controlling thermonuclear reactions in the laboratory. Sir John Cockcroft, research chief of Britain's Atomic Energy Authority, figures there is "level pegging" in fusion control work as between the West and Russia. Both sides have expended great efforts to score a major breakthrough on this front. Scientific papers presented at the United Nations' international conference on atomic energy at Geneva last fall showed that scientists of both countries are pursuing similar paths toward fusion control.

Russia has lagged in nuclear research reactors, but recently has been spurring work in this field. Many scientists now believe that little if any difference now exists between Russia and the West in the state of nuclear reactor art.

Soviet experiments in low-temperature research stack up well with those in the United States say many scientists who have visited Russia. In another specialized field, crystallography, Russia has made many major contributions. Because many solid

substances are made up of crystals, this science is important in discovering how to strengthen everything from electronic circuits to airplane components. "We don't come up to Russia in the numbers of men in the field," says Prof. Martin J. Buerger, a noted crystallographer at M.I.T. Another U.S. scientist claims: "Unless remedial action is taken now, American students of the coming generation who will ask their honest adviser, 'Where can I get the best crystallographic training?' may have to be told the sad truth, 'In the U.S.S.R.' "

Other American authorities believe the United States may be in danger of falling far behind Russia in work on thermoelectric conversion and in acoustics. In a report underwritten by the National Science Foundation, Uno Ingard, associate professor of physics at M.I.T., predicted that if the present rate of progress is maintained, the application of acoustical techniques in liquid and solid state physics, as well as applications of ultrasound in industrial processing, will be much further advanced in the U.S.S.R. than elsewhere within the next few years.

Metallurgy

Russia is challenging U.S. supremacy in this field that is vital to the development of better rocket and jet engines. "It's close—we may be a little ahead of them," says one cautious authority. Reports another metallurgist: "They're one up on us in the development of tungsten rhenium (a very heavy high-temperature alloy), but on the titanium alloys we're ahead of them."

Biggest worry: Russia turns out 4,000 new metallurgists yearly, compared with 600 in the United States. American metallurgists are impressed by Russia's ability to speed basic research findings into acutal production and they admire their equipment. "I saw some equipment in their labs which I would like to buy for our labs, such as a microprobe analyzer which costs $125,000," says a U.S. scientist. This device can determine the composition of metal, using only a dustlike particle of the substance.

Geophysics

In this broad field, which includes the study of the earth, the oceans, and the atmosphere, the quantity of Russian research exceeds that in the United States. The quality of their work, however, is erratic; but in some branches, such as earthquake seismology, U.S. scientists concede the Russians are first-rate.

"Geophysics is a science which the Russians have chosen to emphasize, with massive Government support. They're doing experiments in fields we simply can't afford," says Frank Press, a leading geophysicist at California Institute of Technology and a recent visitor to Russian science centers.

Professor Press cites oceanography as a case in point. "They're going strong on oceanographic work," he says. Other geophysicists report that in seismic crustal studies at sea, the United States and the United Kingdom have had a monopoly until recently, but this leadership is now being threatened. Russia has a much larger oceanographic fleet and its research ships, such as the *Vitjaz* and *Ob*, are up to seven times the size of our biggest research ship, the *Chain*. However, some U.S. scientists insist instruments aboard these Red ships are crude in comparison to ours, and that so far they have added little new to knowledge of waves, marine life, and the ships of the ocean floor. And they stress that bigness is not synonomous with excellence.

The findings of oceanographers are not merely of academic interest; their research is of utmost military importance in such fields as the detection and navigation of submarines. Recognizing this, a committee of the National Academy of Sciences recently declared that the United States runs the risk of serious military and political dangers unless deep-sea research is doubled during the next decade.

Russia also is leading the United States in the use of explosions within the earth. Such work is valuable in discovering more about the earth's crust and can be useful in locating oil. In addition, Russia has 100 seismology stations using uniform equipment and with at least 5 persons manning each station. The United States has about 40 such stations, with varied equipment and staffed by only one man each on a part-time basis.

In meteorology, both countries are busily working for a breakthrough in long-range weather forecasting. "We may possibly lead in this research work, but it's a wide open race," says a Tufts University scientist. Another authority claims, "Judged on our present position we are somewhat ahead of our Russian colleagues in cloud physics and theoretical meteorology. But if we continue as we are, within 5 years we'll be neck and neck."

Most meteorologists agree that we still know little of the basic reasons weather behaves as it does. Fourteen U.S. universities hope to discover some of the secrets by setting up a National Institute for Atmospheric Research, supported by Federal funds but managed by the educators. The university planners note that Russia has a Central Meteorological Institute in Leningrad. The nearest thing we have to this is the considerably smaller Air Force Geophysical Research Center at Bedford, Mass.

Russia's scientific resurgence was obvious during the International Geophysical Year which ended at the turn of the year. "My impression is that the Russian contributions to IGY have certainly been commensurate with these of other major nations participating. The quality of their collected data compares favorably with ours," says Professor Henry Houghton, head of MIT's meteorology department. He and some other U.S. scientists believe that Russia leads in Arctic research, partly because the area is closer to their country. Professor Houghton terms Antarctic research a standoff between the countries.

Reds Have Failed Miserably in Cuba

EXTENSION OF REMARKS
OF
HON. ADAM C. POWELL
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 4, 1959

Mr. POWELL. Mr. Speaker, under the leave to extend my remarks in the RECORD, I include the following article:

[From the Washington Daily News, March 3, 1959]

NO ROOM FOR TOTALITARIANS—REDS HAVE FAILED MISERABLY IN CUBA

HAVANA, March 3.—Communists are trying to convince the Cuban people that the hammer and sickle deserve a place in the new government. So far, they have failed miserably.

The Communists were stopped cold in their tracks, in Cuba. On January 1, they came out shouting about all they had done to help Fidel Castro and the rebels oust one of the cruelest dictatorships ever imposed on human beings anywhere. Their arguments were acceptable to a few radicals in the revolutionary movement who dislike Uncle Sam intensely.

NO SALE

However, with responsible officials from Fidel Castro and his cabinet down to minor officers, the Reds struck out.

Castro knew that the Reds, strong in certain Havana unions, could have helped bring on a general strike but they rejected his call last year.

In one of Castro's first statements after his miraculous defeat of Batista's modern army he made it clear what his views on communism were.

"I am not a Communist," he told a nationwide television audience. He emphasized that there could be no room in his government for totalitarian ideas.

His foreign minister, Robert Agramonte, told the press in the first days of January: "Cuba will not recognize the Soviet Union."

However the Communist Party in Cuba (it is called the Cuban Socialist Party) will be allowed to take part in elections, operate its own newspaper, and, in general, make a nuisance of itself.

A WARNING

Communists have been warned they must abide by the Cuban Constitution. Any evidence that they are using their position for subversive activity will subject them to prosecution for committing crimes against the State.

Castro, Cuban President Manuel Urrutia, and the cabinet, have taken their cue from such democracies as France, the United States, and England, in their attitude towards communism. The Cuban leaders believe if given enough rope, the Communists will hang themselves.

They point out that there is room in a democracy for social justice without having to turn to socialism and communism. The revolution was fought, to obtain social justice Castro has said.

PRESS SOLID

The Cuban Communists' strongest enemies, however, are the Cuban press, and the Roman Catholic Church, to which most Cubans belong. From the very beginning all of Havana's newspapers, including the most liberal, Prensa Libre, have repeatedly attacked the Communists.

Most of the bearded rebels who come from peasant stock will tell you they could never be Communists. However, they are quick to point out that they are sorry the U.S. Government sent military equipment to Batista. But surprisingly enough, most of the bearded veterans who average third and fourth grade educations understand the difference between U.S. Government policy and the feelings of the American people in general.

"I know the Americans were sympathetic to our cause," one 2-year veteran said. "But the people in Washington made a bad mistake."

Any American Can Be an Unoffical Ambassador of the United States

EXTENSION OF REMARKS
OF
HON. RAY J. MADDEN
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 4, 1959

Mr. MADDEN. Mr. Speaker, Mr. David Sheer, chairman of the legislative committee of the Anselm Forum, Inc., of Gary, Ind., has forwarded the following article to me by Oliver Starr, Jr., from the Gary, Ind., Post-Tribune. I am submitting the same for consideration of Congress and the readers of the CONGRESSIONAL RECORD.

If the movement originated by Harry Plissner, of New York, and now spon-

sored by the Anselm Forum, Inc., of Gary Ind., becomes national, it could develop into our greatest accomplishment in promoting international good will with people of all nations and contribute greatly to prevent future wars:

PLEASE SEND ME AN AMERICAN FRIENDSHIP

(By Oliver Starr, Jr.)

Do you want to become an unofficial ambassador of the United States?

Reuben Olson, 4456 Jackson, of the Anselm Forum, can arrange it. All you need is some old magazines and a desire to write to a friend of America across the seas. You may get a letter like the one received in Gary recently which said: "Please send me an American friendship."

These words written by a Chinese letter-writer tell the impact of a new people-to-people program started only 6 months ago by a New York businessman.

How one man has released a great tidal wave of friendship for America from all corners of the earth is another remarkable testimonial to the power of an idea. As a result people from such far off places as India, China, South Africa, Australia, Germany, and Denmark are writing letters to people in Gary, Ind., to tell of their eagerness for friendship with America. The people of Gary in turn are spreading the story of democracy to all points of the globe.

The New Yorker's name is Harry Plissner who one day last spring while reading the news of Little Rock and other racial tension areas decided the rest of the world probably was getting the wrong impression of America. He made up his mind to try to do something about it. He found out that Americans throw away about 30 million magazines a month while millions of persons in other lands are thirsting for knowledge of all kinds. It gave him an idea. He dashed off 20 letters to leading newspapers all over the world, telling readers that he had American friends who were willing to send them magazines free. (The cost to the sender is only from 7 to 14 cents postage, depending upon the size of the magazine.)

The response literally swamped Plissner. In one month more than 14,500 letters poured in. He had to quit his business of running a trailer court to manage his magazine friendship campaign. By advertising in U.S. newspapers, radio and television, Plissner got 20,000 American volunteers to help him. Letters are coming to him now at the rate of 1,000 a day.

In Gary, Reuben Olson heard about Plissner's program. He wrote for a supply of letters and a short time later his mailbox was brimful with letters from all over the world.

By contacting individuals and organizations, Olson so far has located 205 correspondents in northwest Indiana for overseas letter writers. He feels the program has a tremendous potential for improving world relations.

"We're talking about exploring outer space," Olson points out, and then adds: "We're not satisfied with our own little world."

"This new program is exploring inner space. People are just aching to reach across the pond and shake hands. When brother meets brother across the sea it makes the tensions of today's world a little easier to bear."

Another reason why this program is having such impact is because many of the people who are writing to America are people in high places, holding important positions in business, education, and government.

COLLEGE STUDENT

Mrs. Martin Schwegel 3810 Johnson, found her correspondence with a Taiwan University college student one of the most stimulating experiences in her life.

The college girl, Yun Ching (which means Blue Cloud in English), writes that she is taking 13 subjects and has 34 hours of studying each week. During the period when the Communist Chinese were shelling Formosa she wrote that every student was called upon to give aid to a little village of Kinman which was undergoing bombardment.

A special week was observed called Give Your Best Regards to Kinman. The students gave food, money, and their blood to beleaguered Kinman.

Yun Ching in one letter tells of the Chinese legend of the moon-cake and how the Chinese threw off their oppressors, the Mongols, partly by means of inserting instructions in the moon-cakes for the revolutionaries.

STEELWORKERS

A Hobart steelworker who has been corresponding with a Chinese seminary student scoured this region in December to find a Chinese Bible for his friend for Christmas. The Chinese religious student was overjoyed with the gift and now can't wait for the opportunity to come to America to meet his benefactor. Here are a few excerpts from the current batch of letters received in Gary by Olson for distribution: A graduate of a Chinese Naval Academy on Formosa writes: "Get interesting in international affairs so that I wish I could have some papers of the New York Times to read. Luck will be mine and at last I give my best wishes to you."

BANK EMPLOYEE

A bank employee in the Central Bank of India writes: "I would like to contact people in banks and know more about banking done in your country."

An employee of the Central Broadcasting Station at Taipei, Formosa, requests old American magazines as, "It is indeed very difficult to buy or to read magazines concerning mechanical engineering such as radio, TV, electric power, engineering electronics, rocket, radar, car, etc."

A student in the Political Staff Officers College of Free China on Formosa writes that he has read of Plissner's offer and says: "Indeed it's not only strength the friendship between the Americans and Chinese, but also urge exchange in culture in each other. Now I am studying in the Political Staff Officers College. I would like to appreciate on the efforts it will be made by you. I am wishing you have a good time."

A man writes from Kongandoor in Kerala, India, of the beauty of his city: "I am extremely glad to take advantage of this rare opportunity so generously offered to the people of India. I may tell you in this connection that Kerala although smallest of the Indian States is a beauty spot and it is remarkable for its natural scenery. I am living in a village whose beauty attracts many people. It is on the banks of a river and it is noted for its fertility and luxuriant growth of vegetation. I always welcome visitors to this part of Kerala."

LEPER

A man from Penang, Malaya, writes: "I am a leper, and this island is a leper settlement, separated by a channel about a mile wide from Penang. As I am a leper and an amputee, and unable to work, I cannot afford to buy reading materials. I need these magazines to pass my time as well as improve my English. I will share them with my English-speaking friends here."

CLERGYMAN

An English pastor from the Unitarian Church in Ipswich, England, writes: "I am a firm believer in the need to foster Anglo-American understanding, and if you can kindly arrange ot have some of these magazines sent to me, I will be very glad to pass them on to others when I am finished."

A communication from Mahatma Ghandi Memorial College in India says: "Surplus, hard-cover books that have to do with medicine, engineering, architecture, etc., are sorely needed by Mahatma Ghandi Memorial College. Students are very poor and cannot afford to buy textbooks essential to their studies. They must use the limited volumes in the college library and must wait many days before the books are available."

Another breakthrough in world understanding is going on in the medium of sound. A new organization called World Tape Pals is promoting the exchange of sound tapes between people of all nations. Anselm Forum has had its own tape exchange program going for several years but is also joining World Tape Pals to get new leads. On its own Anselm took part in recording tapes with the representative from Ghana, an attaché from the Israeli Embassy and a religious leader from Johannesburg, South Africa. The tapes were sent to each of the respective countries.

COUNCILMAN AND TEACHER

A Roman Catholic steel mill open hearth operator, a Negro city councilman and a Jewish school principal plan to make a tape during Brotherhood Week which will be sent to points around the world to show how brotherhood as practiced in Gary is more typical of America than some of the articles on racial tension which they might have read.

A Gary schoolteacher plans next week to make a tape with the children in her class for exchange with an English class of the same grade.

"The oversea friendship program," said Olson, "is not only an opportunity to foster good relations with people in other nations but also a chance to learn and broaden our culture, for there is not a single nation on the face of the globe whose citizens have not made a definite contribution to the progress of mankind."

Olson said that the people-to-people program once more illustrates the truth of the words of Rev. F. W. Backmeyer, minister emeritus of the First Presbyterian Church, who said: "We no longer live in a place smaller than the world."

Proposed Reduction of National Debt

EXTENSION OF REMARKS

OF

HON. JIM WRIGHT

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 4, 1959

Mr. WRIGHT. Mr. Speaker, several of us in this Chamber, notably including the gentleman from Texas [Mr. IKARD], the gentleman from Louisiana [Mr. BOGGS], the gentleman from Florida [Mr. ROGERS], the gentleman from Arizona [Mr. UDALL], the gentleman from Tennessee [Mr. LOSER], the gentleman from Nebraska [Mr. BROCK], the gentleman from Florida [Mr. MATTHEWS], the gentleman from Kansas [Mr. HARGIS], the gentleman from Texas [Mr. CASEY], the gentleman from Iowa [Mr. COAD], and others, have urged the adoption of a systematic program of national debt retirement.

Under leave to extend my remarks, I am including a chart of proposed amortization based upon a total national debt of $280 billion with annual payments of $2.8 billion upon the principal amount and interest payments estimated at 3.5 percent:

National debt of $280 billion

[In billions of dollars]

Year end	Total debt	Payment on principal	Interest at 3.5 percent
0	280.0	2.8	9.800
1	277.2	2.8	9.702
2	274.4	2.8	9.604
3	271.6	2.8	9.506
4	268.8	2.8	9.408
5	266.0	2.8	9.310
6	263.2	2.8	9.212
7	260.4	2.8	9.114
8	257.6	2.8	9.016
9	254.8	2.8	8.918
10	252.0	2.8	8.820
11	249.2	2.8	8.722
12	246.4	2.8	8.624
13	243.6	2.8	8.526
14	240.8	2.8	8.428
15	238.0	2.8	8.330
16	235.2	2.8	8.232
17	232.4	2.8	8.134
18	229.6	2.8	8.036
19	226.8	2.8	7.938
20	224.0	2.8	7.840
21	221.2	2.8	7.742
22	218.4	2.8	7.644
23	215.6	2.8	7.546
24	212.8	2.8	7.448
25	210.0	2.8	7.350
26	207.2	2.8	7.252
27	204.4	2.8	7.154
28	201.6	2.8	7.056
29	198.8	2.8	6.958
30	196.0	2.8	6.860
31	193.2	2.8	6.762

99	2.8	2.8	.098
100	0	2.8	.000
		280.0	494.900

[1] At the 29th year, the total paid for the payment on the principal and the interest amounts to 9.758 billion.

this is 0.042 billion less than the 9.8 billion we are paying per year at the present time, and will continue to pay on our present program.

On the above program, we will have paid out 494.9 billion in interest, and 280.0 billion in principal, or a total of 774.9 billion. If we just keep on paying interest, we will have paid 980 billion, and still have the 280 billion debt left, or a total of 1,260 billion. The difference is 485.1 billion to the good, and our debt is paid.

Address Delivered by Henry Ford II Before the Student Body of Yale University

EXTENSION OF REMARKS

OF

HON. J. ARTHUR YOUNGER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 4, 1959

Mr. YOUNGER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following very timely address delivered by Henry Ford II, president of the Ford Motor Co., to the student body of Yale University in Woolsey Hall at New Haven, Conn., on Thursday evening, February 19, 1959:

I must say that I'm surprised to find myself at a podium I had always regarded as the special domain of a small, select, and austere group known as brains. My unsuitability for that role is evident in that I find myself billed as speaking in answer to the comments made here in November by Mr. Walter Reuther—a spot no real brain would be trapped into.

As a matter of fact, I am sure I would have to agree with Mr. Reuther on many of the broad goals and aspirations that he describes so eloquently.

When we consider what we as a people want out of life, the kind of world we would like for our children, most of us would come up with substantially the same answers.

Most of us would agree that we want a society that offers the greatest possible opportunity for freedom and for individual growth and self-fulfillment. Samuel Gompers had a simpler way of putting it when he said that what labor wanted was more. He might have said more and better. In purely material terms, we all want more and better—more income, more security, more independence, more freedom, more and better education, better medical care, more leisure to do the things we want to do. As a nation, we have vast unfulfilled social needs. A substantial number of American families still do not earn enough to support a decent American standard of living. Millions are still crowded into big city slums. Our whole educational system falls too far short both in quality and quantity of the attainable ideal for a society of such resources. Our facilities for caring for the aged, for the mentally ill, and for combating crime and juvenile deliquency are inadequate.

I'm sure that most of us also are concerned with those peculiarly difficult moral and spiritual problems that arise in an economy of plenty. We are concerned about the human consequences of bigness in government, industry, and labor, of the impact of mass communications on our cultural life, and the effects of increasingly scientific organization of people for economic purposes—the total effect which has been described as the society of the bland leading the bland.

I'm sure we are all deeply concerned with the problem of peace and the exceedingly difficult questions posed by the new Communist economic cold war.

As you know, Mr. Khrushchev has lately taken to predicting the ultimate triumph of his system through economic conquest. There will be no war, he says, because communism will bury us in the competition between its system and ours.

This is no empty threat. We can no longer hide behind the comforting thought that communism is inherently unworkable as an economic system. We have been sharply challenged in basic science and industrial technology. We see evidence of swift growth in both the Soviet Union and Red China—growth under forced draft, admittedly, and at a terrible human cost—but growth that nevertheless must be impressive to people in nearby underdeveloped areas.

Quite apparently Mr. Khrushchev thinks it is only a matter of time until the resources of most of Asia and Africa fall to Communist hands. If the Communist sphere, through the forced development of vast raw material and manpower resources, can flood the world markets with low-priced goods, it could isolate America and Western Europe politically and economically, and at the very least reduce the free world to relative impotence.

And today many intelligent observers are predicting that, if present trends continue, the balance of world power may shift radically to Asia, within the lifetime of this audience. They suggest that, certainly within the lifetime of our children, we could be surpassed in economic power by both China and the Soviet Union.

I don't mean to suggest that our future survival depends on matching either Russia or Red China, or both, in the rate of productive growth in the near future. One reason they are moving ahead so fast is that they have so much farther to go than we. For us to carry on an all-out economic race, comparable to the arms race, would be foolish. And it is quite possible, furthermore, that if these countries reached their goals, the result would be a great lessening of world tensions and a substantial watering down of Marxist dogma.

Nor would I suggest that we can solve all our domestic social problems and meet the challenge of Communist economic competition merely by increasing our own wealth and economic power at a faster rate. More material wealth is by no means the sole or even the primary cure for all our problems.

I do believe we must continue to demonstrate that our kind of economic system can maintain its dynamism and bring ever greater social benefits without infringing on our personal, political, or economic freedoms. And I think it is obvious that we cannot achieve the greater social benefits we all desire, nor can we do the kind of job we ought to be doing in the free world, without spending money.

Some people argue that we could make a much better showing right now if we would merely be a little wiser and a little less selfish, if taxpayers would stop fighting tax increases, if farmers would give up some of their subsidies, and veterans some of their benefits, and if Congressmen would stop pork-barreling. That may be. But it hardly seems realistic to suppose that we are suddenly going to be transformed into a nation of saints or hair-shirt addicts. It's a pretty good bet that we will go right on being the frail and fallible human beings that we are.

To be realistic, our best chance of acting wisely and well as a nation is to make it easier for all of us to do the things that we know we ought to do.

The trick is to arrange things so we can do more and more without having to sacrifice more and more. And the way to do that is to expand our economic base as rapidly as we can soundly do so. If we are able to do that, we can and will have more of everything: higher living standards; more tax revenues; more social benefits; a more effective foreign economic program.

On the whole, of course, this country has done exceptionally well, better than any other, in terms of dynamic economic growth.

But I think it is a reasonable proposition that we can and should do better than we have done in the past by increasing our rate of growth.

How do we go about doing that? I suppose we might start by trying to define exactly the things we would like to achieve in order to maximize our progress.

Ideally, we want the fastest possible continuing increase in the productivity of manufacturing, agriculture, and services. Productivity, of course, is not the same thing as production. Increasing productivity means increasing the amount of goods or services produced with available resources—labor, capital, management, and materials. The more efficient use of all these elements determines the increase in productivity.

Then we would want to increase production to utilize as fully as possible our industrial capacity and to maintain consistently high levels of employment.

We would of course also want continuing high levels of consumption necessary to absorb and sustain a rapid increase in the production of goods. We would want to find ways to decrease the costs and inefficiencies of distributing goods.

And while doing all these things, we would want a stable economy—one that is not subject to sharp business cycles, chronic deficit financing, chronic inflation, or a combination of the three.

These are all eminently desirable objectives. In a relatively primitive economy, under the iron whip of a dictatorship, it should not be difficult to do some or all of these things, for a time at least.

In a more complex and delicately balanced free economy, it's not quite so easy. If you succeed, for example, in increasing sharply your productivity performance, you may displace people from jobs in substantial numbers. If you try artificially to sustain high levels of employment and production, you wind up with surplus goods, and you will almost certainly resist the kind of action that would give you the increased productivity you want.

That is not to say that we cannot by intelligent, sound planning and action increase our rate of economic progress. It can be done. But there is, in my opinion, a right way and a wrong way to go about doing it.

The right way, to put it very simply, is to provide the best possible conditions for the economy, industry, agriculture, and the various services to grow in a natural and balanced manner, and to use the powers of government intelligently to abet this natural process. I have a number of ideas on this subject. Before I go into them, I'd like to take a good searching look at what I consider a very wrong approach to the problem.

I have in mind the approach espoused by certain elements in our society who advocate what I would call the galloper treatment.

Now a galloper is a little cotton stocking filled with powdered carbon. It was used back in prohibition days to hasten the aging of whiskey in the barrel at a time when it was not considered practical to let it mellow and ripen in the natural order of things.

The advocates of giving the economy the galloper treatment are do-it-now men. They want sweeping social measures and they want them now, and all at once. They are frustrated by the perverse contradictions of the economy that keep us from achieving all the things we want now. They appear to feel quite earnestly that the issues facing this country are so grave that we cannot entrust our future to the imperfect and relatively uncontrolled movements of the free market economy.

And though they say, and indeed may believe, that they are in favor of the profit incentive and private enterprise, they say it with a great and obvious lack of conviction.

For they also like to charge that business is inherently morally inferior because it is motivated by the desire for personal gain, that it is greedy, that it lacks constructive social imagination.

The galloper viewpoint is a crisis viewpoint. It sees our national life as a series of cataclysmic happenings and unlimited desperate needs, each one calling for immediate action—usually involving a total mobilization of our resources under strong, central guidance.

This, of course, is a fair approximation of what might be called the traditional extreme leftwing economic viewpoint in our society. I discuss it at such length because this viewpoint once again appears to have politically powerful advocates, after a long period in which it could make no significant headway in either political party.

While it will be disavowed, I am convinced, and I believe that objective study demonstrates, that this is the view held by the single most influential element in the American labor movement. I do not join my deeper-dyed colleagues in viewing the galloper advocates as cynical, Machiavellian demagogs driven by personal ambition or by alien philosophies. I have no reason to doubt that they are honestly and earnestly concerned with promoting the well-being of society.

But I take very strong issue with many of their basic ideas and with many of their methods. I don't know of anybody or any group of people smart enough to mastermind and manipulate artificially our economy without doing much more harm than good. And I am concerned today because I believe that this group has a very good chance of imposing its basic views upon our society.

In terms of unfettered power, big labor is the strongest single center in the American economy. There is broad agreement today, except perhaps among labor-oriented economists, that the big union today is in a position of unrestricted monopoly power. It is using that power not to increase the growth of the American pie, but to cut out a larger share for its constituents. In the process, it is unquestionably thwarting the very improvement in productivity and the increased economic growth that it says it wants.

There can be no question that the unions today are politically powerful and effective. In a growing number of States, unions have achieved increasing influence if not practical control over legislatures, courts and administrative agencies. I have in mind, for example, the recent Michigan Supreme Court decision which, in effect, would force industry to finance strikes against itself.

These gains enable some unions not only to tighten the screws on management, but also to advance broad social and political goals of their leadership.

I believe, in fact, that the giant AFL–CIO is functioning less and less as a primarily economic organism. Today, it takes care of labor's traditional economic concerns with its left hand, while its right arm is plunged up to the elbow in politics. It is, by its own admission, using political action to achieve economic and other ends that it cannot achieve across the bargaining table. And in a time of relative political apathy it is, I think, the most aggressive, ascendant force in American politics.

And, finally, I believe that this economically powerful, politically powerful force has among its leaders a few men who, in their zeal to accomplish their own brand of social ends, have been careless about means, to put it as gently as I can. Either they are very poor economists or they are not willing to let objective economic truth stand in their way.

They are masters of the righteous slogan, the thinly veiled appeal to selfish interest, the glib response to the serious and complex problem. They answer the important and valid generalization with the fast, flashy and often false particular. Because they are politically adroit and highly persuasive publicists, economic understanding is being done a measurable harm, misinformation is multiplied, and the democratic process itself is impaired. As Adlai Stevenson used to say: "It is better to lose than to mislead the people."

Now I realize that such methods are the traditional methods of political oratory. I don't mean to condemn them as such; I do think they should be recognized for what they are.

For all these reasons, the giant unions, their economic monopoly power, their political influence, their methods and their motivating philosophies deserve the most earnest scrutiny by all thoughtful Americans, Democrats and Republicans, liberals and conservatives, who are seriously concerned about preserving important fundamental values of our economic and political system.

I have made a number of flat and broad assertions here and I will make more, because there are a lot of things I want to say and just not enough time to document them all. I would like to point out one or two major areas wherein what union leaders say and what they do offer particularly sharp contrasts. It is perhaps extraneous to mention, by the way, that what the fellows at the top say in public often has precious little resemblance to what they say at the grassroots to the rank and file.

The politically vocal group in labor have lately been beating the drums for a substantial increase in national productivity. Some would like to see us move from the historical average annual growth of about 2.3 percent to something more like 5 percent.

If union leadership seriously wants increased productivity, I can think of no better place for it to start than with its own bargaining philosophy and demands. It is common knowledge that many trade unions have traditionally and strongly resisted new methods and tools leading to productive increases. Certain unions in the construction trades, for example, have stubbornly and effectively held back progress at a cost of untold billions of dollars to homeowners and to the whole economy.

The old trade union psychology has carried over into the newer industrial unions, though I must say in fairness that most of our present industrial labor leaders have not seriously attempted to block the introduction of new and more productive machinery—despite their outcries against automation. Nevertheless, many of the barriers to increased productivity are union made.

The labor contracts of various industries contain provisions that seriously hamper progress in efficiency, including featherbedding, union participation in determining work standards, extreme seniority rules, and actual disincentives to outstanding performance. On the latter point, in our 1958 negotiations, the UAW seriously proposed that promotion should be based exclusively on seniority, and that merit should not be considered—a proposal to which we did not agree.

In view of all this, incidentally, I am always puzzled to find union leaders speaking of increased worker productivity, as though workers must sweat harder in order to produce more. Improved productivity means less human sweat, not more. Industrial productivity generally is increased through investment in better, more efficient plant, better machinery, better methods and processes, better scheduling, and so on.

In this sense "management productivity" is a more appropriate term than "labor productivity."

The union leaders who say they want more productivity—while steadfastly resisting it—also say a lot of other things. They say they believe in profits and the incentive system. They say they want all groups in the society, including business, to share in the produc-

tive growth of the economy. They say they do not want wage gains that are inflationary, and that they don't want to redistribute the pie, but merely to share in a growing pie. The fact that so often they do the exact opposite of what they say does not necessarily mean that they are insincere. It may just mean that they feel they must do a lot of things they don't really want to do in order to hold their jobs.

Take the wage-price inflation dispute. In the years following World War II, labor hourly wage rates had climbed at a faster rate than in any like period in our history. In 1956 and continuing well into 1958, we had a series of even sharper increases in hourly wages and fringe benefits in major manufacturing industries. These averaged from 5 to 6 percent a year, or from two to three times the longrun average annual growth in productivity for the economy. Since about 80 percent of the final cost of manufactured products is attributable to labor content, we found ourselves in a full-scale wage inflation. Higher wages in industry brought demands for higher wages and salaries throughout the economy, and the inflationary pressures spread.

Of course, industrial labor—and it alone—was insulated against the inflationary effects of its own wage increases. Many labor contracts contain escalator provisions, known as cost-of-living allowances, which provide automatic wage increases equal to the rise in consumer prices. They also have additional guaranteed annual wage increases in the form of an annual improvement factor. Negotiations for wage increases usually start from on top of this base.

In 1958 people began to wake up to these facts, and the public reaction to rising living costs put the big unions on something of a spot. Union leaders are always under pressure to get regular and bigger wage and benefit increases for their membership. However, a point had been reached where they could not get those increases out of the normal productive growth, wage costs forced prices upward, and the added wages that went into the unionized worker's pocket inevitably came out of somebody else's pocket—mainly from the pocket of the farmer, the teacher, the preacher, the Government worker, and retired people on fixed incomes, who did not have the economic power to protect themselves.

In the face of this pressure, union leaders came up with the theory that what we had was not wage-caused inflation but profit-caused inflation, that industries with monopolistically administered prices were pricing their products in such a way as to extort bloated profits from a helpless public.

As a matter of fact, the aggregate statistics for the movements of prices, profits, and wages over a substantial period of time directly contradicted this thesis.

Of all major components in the economy, business profits alone have failed to share in the exceptional growth of the past decade. Compensation of corporate employees increased from $90 billion in 1948 to $160 billion in 1957. Increases both in total employment and rates of pay contributed to this rise. For example, average hourly wage rates in manufacturing industry increased about 50 percent in this 10-year period. Corporate net profits, by contrast, stayed at about $17 to $18 billion a year despite greatly increased investment and sales. The return on capital invested in manufacturing declined from 16.3 percent to 11.1 percent, or about one-third, over the same period.

I have no idea whether the rise in compensation and wage rates is just and fair on an abstract moral basis. But I do think we must ask whether the failure of profits to keep pace with economic growth is healthy for this country and its people. Each year it takes more and more capital investment merely to sustain a consistent level of profits. If our labor leaders want dynamic growth, they should be concerned that industry gets enough profit both to create and to lure substantially greater capital investment.

The fact is that when the statistical evidence failed to support the union's price-inflation theory, they ignored the facts that did not fit their thesis. They indulged in highly selective statistical argument. For 3 years, they made great capital of the fact that General Motors made some very substantial profits in 1955.

During our own 1958 negotiations, we were constantly beaten over the head with GM's 1955 profits and Harlow Curtice's 1955 paycheck. About our own profits, which were worse than nonexistent at the time, we heard nothing. So if anybody happens to give you an argument based on Harlow Curtice's pay or the number of times United States Steel has increased its prices, I hope you will ask him to open the book a little wider and let you see the rest of the figures.

Now of course the insidious thing about wage-cost inflation is that it cannot be stopped by any normal economic procedure. We have here an absolutely unlimited appetite with virtually unlimited power to gratify itself.

Taking at face value the statements of union leaders that they do not want inflationary wage increases, that they want to encourage increased productivity and the capital formation necessary to achieve it, it is most unrealistic to assume that they will match their actions to their words under the present circumstances.

Our big unions need help. The first step is to relieve them of the burden of monopoly power so that once again they will meet management on a basis of real power equality, and competitive market forces can work to keep profits, prices, and wages in balance. To do this requires sound action limiting monopoly power of unions. Such action would also help to correct the abuses that unrestricted power has made possible in certain unions. Another advantage in limiting union power would be to relieve some of the growing union pressure on government—including the administrative, legislative, and judicial authorities, both State and national—so that Government may continue impartially to balance the conflicting powers of labor and management, and not act as a partisan of one group or the other.

At the same time, there must be effective political action to oppose the political action of unions. I can assure you that finding the vitality to match the political vitality of the union movement will be no easy task. It is a fact of life that the great majority of our voting population is not in the entrepreneurial group and is largely indifferent, if not actively hostile, to industry. People generally do not recognize their personal stake in the business corporation.

People seeking direct social benefits from Government know what they want and are willing to work to get it. The recent political triumphs of unions in such States as Michigan, Indiana, Ohio, and California are the result largely of active participation in politics by the whole union organization and many of its members.

While business has been politically active, it has not been effective because of its failure to generate broad participation by people in local politics. I suspect also that it has erred in identifying itself and its causes too exclusively with the extreme conservative political viewpoint. It spends most of its time trying to convert the faithful; it has notably failed to appeal effectively to the large mass of independent voters and has almost totally defaulted in terms of making its influence felt within the more moderate elements in both political parties.

It seems to me that the best hope for stopping the present political drift toward a Government-controlled economy, and for opening the door to exuberant economic growth, lies in the political activation of a large, moderate, politically inactive middle-income group in our society. This group amounts, by one estimate, to 30 percent of the electorate. It is the fastest-growing group in the country, composed substantially of white collar and middle management employees. It could be playing a dominant role in politics. If it can be mobilized, it would provide a solid and very wholesome buffer to extremes of either the right or the left.

Today business is actively seeking to organize this latent political power and to regain the ground it has lost as a result of its own indifference and blindness. We need not and indeed must not think of this job in negative, stop-union terms.

Let me assure you that, despite my remarks about certain aspects of union activities, I am not in favor of union busting.

I appreciate fully the valuable contributions of organized labor to our society. I believe that over the long run, in a free enterprise economy, industrial workers need good unions with intelligent and honest leadership to represent them. We might never have had today's overly powerful unions if it were not for the bad, unwise, irresponsible behavior of many businesses of an earlier era.

But I am opposed to unrestricted power. I am against it in business. I am against it in government. I am against it in labor. Monopoly, unrestricted power in any form, is inconsistent with the values and effective functioning of our kind of society.

Though unions argue that they are not a proper subject for monopoly control because they represent human beings, rather than commodities, the fact is that unions can and do restrict trade just as effectively as any other economic force.

I do believe that bringing labor's economic and political power within reasonable bounds will have valuable consequences for the whole country. It will temper one particularly insidious form of inflation, and that will mean greater stability throughout the economy. It will stop the constant squeezing of profits between the pincers of rising costs and price resistance, and that will mean increased incentive to invest in new products, new plant and equipment.

It will be one important step toward building a more dynamic economy along the sound and healthy lines that I mentioned earlier—that is, by providing the best possible conditions for the whole economy, including industry, the services and agriculture, to grow in a natural and balanced manner.

Now let me admit that up to this point I have not said much that the boys down at the Union League Club would not applaud. Clamp down on the unions? Resist direct Government interference in business? By all means, they would say. They might take issue with me, of course, for not having proposed a reduction of Federal Government activities and the Federal budget to the levels of the Harding administration.

But if business can't come up with anything better than merely negative proposals, if it can't come up with a positive and workable program for a stronger and more dynamic economy, then it will certainly lose out in the political race with those who paint a more brilliant picture of the future, who offer action now—however ill-conceived it might be—and who appeal directly not only to the desire for more, but to commonly held, deep-seated American ideals—the ideal of caring and caring well for our sick and aged, our helpless and indigent; the ideal of giving our young the best we can give them of sound health and good education; the ideal of helping to the best of our ability less fortunate people in other lands, not merely because it is to our advantage to do

so, but because we are part of a common humanity, and we cannot say: "Am I my brother's keeper?"

This is the kind of appeal that stirs the minds and hearts of the American people, as it does those of people everywhere. Before such an appeal, the dry dissertations of many businessmen on the virtues of the private enterprise system blow away like dust in the wind.

Certainly I believe in the private-enterprise system. I believe it can go on giving us the great benefits of economic and social progress it has given us in the past. I believe in it, not because I think it is divinely ordained, but because it works better than any other system yet devised. It works because it effectively harnesses aggressive human drives to broadly constructive purposes. It works because it provides incentives that seem to stimulate masses of people to vigorous effort and a constant restless search for greater efficiency.

But I recognize also that the private-enterprise system is not really a system at all. What we have is a loose and tremendously varied array of private and public enterprises, held together by the cohesive force of certain underlying principles—free incentive and a degree of freedom of choice and action established by law and by custom. We have three to four million centers of initiative in this country versus one in Russia.

Again, I recognize, as all of us must, that as our society has grown more complex, Government has had to play an ever greater role, direct and indirect, in our economy. Realistically, over the years ahead that trend is not likely to be reversed.

Our problem as businessmen is not to dig in our heels and resist any and all kinds of governmental activity. Our problem is to try to see to it that Government does the right kind of things, that it avoids those measures that are economically harmful—the subsidies that perpetuate marginal industries and marginal agriculture, or that try to sustain marginal industrial areas, for example—and that it provides more of the services and facilities that promote genuinely worthwhile economic purposes without shackling economic freedom.

In that context, I would like to suggest several general areas of action that I believe hold great potential for a new productive explosion in the American economy.

First, I would suggest an attack by all elements of our society on the existing barriers to increasing productivity in industry, agriculture, and services. Let's try harder to get rid of the old-world craft guild psychology that has no place in our dynamic, fast-changing economy—the psychology that locks people into marginal jobs and obsolescent skills.

Second, I suggest that we make possible greatly increased business capital investment by permitting business profits to share reasonably in our economic growth, and by wiser taxation, particularly in terms of more realistic and faster depreciation allowances for writing off plant and equipment and encouraging the building of new.

Third, we must try to stimulate greater consumption of goods and services. The way to do this effectively is to intensify sharply our development of new or greatly improved products that will persuade people to get out their wallets and buy. Industry must utilize much better the latent creativity of the people it employs, and venture more in introducing new products. We should develop better incentives to encourage new product ideas; publicize and commend originality in product design; and use the resources of government, trade organizations, and the like to anticipate needs for new kinds of products and to exploit more fully the vast potential of recent scientific discoveries and new technologies.

Fourth, we should use the resources of industry and government more effectively to maintain high and stable levels of employment and income.

I think we would all agree that the one single factor in the private enterprise economy that leads to great political pressures toward the welfare state is its cylical nature and its need for mobility within the work force.

While we can minimize cycles in the free enterprise economy, there is no way of eliminating them entirely. Buying habits change. Excessive inventories of certain goods accumulate from time to time. Plants shut down and people are laid off. At times whole industries become obsolete, and their employees are forced to find new jobs and learn new skills.

Again, technological advances in industry and agriculture displace people from farms, from factories, from special labor skills.

All of these things create worry, unhappiness, and economic problems for the people involved. Ultimately they turn to the State to solve their problems.

Now the fact is that a remarkable and wonderful thing has been happening in our country. In the postwar period there has been a great increase in nonfarm and nonindustrial employment—in the Government, in education and other social services, in recreation and tourism, in business services. A whole new and greatly varied world of opportunity has opened up for millions of Americans. Because of this change in type of employment most people went right on working through the postwar recessions.

We ought to be concentrating hard on accelerating this trend by increasing greatly the educational opportunities open to our whole populace. We should be upgrading people and skills at the fastest rate possible. We need better-educated people in vast numbers throughout our society. Right now it is estimated that only about half of our brightest high-school students are receiving the higher education that would enable them to realize their full potential. We are prodigally wasting our most vital single resource.

In the mid-sixties, we will have a great influx of young people into the job market. Many people of superior talents will be competing for routine jobs, of which there may not be enough to go around. We ought to be planning right now to help provide these young people all the higher education they can profitably use.

I am sure many things can be done to help people meet technological and economic change more readily. Today there are many public and private measures that protect people against the excessive economic hardship that was common in an earlier day. There is a certain inflexibility in many of these measures. They tend sometimes to tie people to skills that are no longer in demand and often to hold them in communities where the jobs they held no longer exist.

Business in general has not given the earnest attention it might to the solution of this problem and its own stake in that solution.

In fairness to the businessman who is often charged with a lack of social imagination, I must point out that the unions provide a potent disincentive to the exercise of such imagination. Unions tend to view social awareness as their private domain and to resent sharply any poaching by business on that domain. The hapless businessman who publicly explores a novel economic idea risks having it hurled back at him across the bargaining table, doubled in spades and scarcely recognizable. If he then demurs, he stands publicly revealed as a welsher who won't put his money where his mouth is.

It's awfully hard to be farsighted with that big union thumb in your eye.

But I, for one would like to see business and industry give serious and systematic thought to finding ways in which both private and public resources can be used more intelligently to stabilize employment and income in ways consistent with broad national growth in productive efficiency.

I know that in American management there are many men with the broad vision and the sense of social justice needed to break through the barriers that block the fullest development and growth of our society. I think that the talent, the imagination, and the sound practical judgment of business must be marshaled more effectively to attack these problems.

The American business system has created a great reserve of national wealth out of which we have already established an unheard-of degree of security and prosperity for the American home. We have shored it up with broad public and private social measures—measures which in themselves have strengthened our economy and have contributed to our prosperity. It follows that we businessmen should not allow label-thinking to scare us away from examining fairly and without fear all future means which, consistent with economic and political freedom, will enhance our future prosperity and security as a nation, and encourage people to accept willingly the marginal uncertainties characteristic of any system where initiative is not centered in the Government.

In material terms, our future prospect is breathtaking. The new technologies which have already so vastly altered our lives—atomic energy, electronics, the new chemical, and the new metallurgical advances—are in their infancy. We have had a scientific explosion that has yet to be translated into an economic explosion of like magnitude.

In the face of vast opportunities and the economic challenge of world communism, we simply can't afford to play two-bit poker with protective tariffs and unimaginative foreign policies. Nor can we afford, at home, to sit around haggling about how we will carve up our pie instead of doing the things necessary to free our economic machine and make that pie grow as it has never grown before.

America's potential is more than equal to the stirring challenge we face. By doing promptly and thoroughly the things we know we must do, we can reaffirm in the minds and hearts of men everywhere the deep conviction that human progress—social and spiritual, as well as economic—can best be achieved through freedom and individual initiative.

Cambodia

EXTENSION OF REMARKS

OF

HON. ADAM C. POWELL

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 4, 1959

Mr. POWELL. Mr. Speaker, I wish today to salute the March 6 independence day of the people of the monarchy of Cambodia, His Majesty Prince Norodom Shanouk, and His Excellency Nong Kimny, Ambassador to the United States.

Cambodia is a country of 6 million inhabitants, 400,000 of whom are Vietnamese and 350,000 Chinese. The Cambodian economy is essentially agricultural with rice as a principal crop and source of wealth and rubber a close second. Large-scale industry is virtually nonexistent. Most manufacturing con-

sists of agricultural processing in rubber plants, rice mills, oil mills, with limited industries producing lumber, tile, brick, woven goods, rope, baskets, pottery, jewelry, and skins for local needs. Investigations have not revealed substantial mineral resources, but an adequate geological survey has not yet been made of Cambodia. However, some deposits of iron ore, copper, manganese, gold, coal, zircons, and phosphates have been revealed.

Private capital investment has been little utilized in Cambodia in its economic development largely for the fact that emphasis is on projects which are of the basic type frequently carried on by governments. But, says the report of the U.S. Department of Commerce, it also derives from obstacles to private capital investment. Among obstacles to private capital investment are lack of managerial, technical, and mechanical skills and relatively limited domestic capital. Private enterprise has been slow to invest in Cambodia in response to a climate of economic nationalism which inclines the Government toward close supervision of private economic activity. Thus the Government requires prior authorization of new investments by the Minister of Finance who together may decide which proposed activities are useful to the economy of Cambodia. Moreover, the law requires some Cambodian capital participation and the employment of Cambodian personnel, but it also adheres to the principle of a just and equitable indemnity in case of nationalization, and offers the possibility of a 10- and 30-year guarantee against the risk of nationalization.

Cambodia achieved real and complete independence from France on November 9, 1953. The freedom to determine her future which she now enjoys is jealously guarded. The Cambodians, so Prince Noradom Sihanouk has written, will be lackeys of no foreign powers and their policy will be suited to their national needs.

In their foreign relations, the Prince explains, they are favoring neutrality which neutrality, he asserts, has been imposed on them by necessity—a position forced upon Cambodia by its geographical position, lying as it does between the Western bloc and Eastern bloc countries of North Vietnam and the vast Peoples' Republic of China. What choice have the Cambodians but to try to maintain an equal balance between these blocs?

Morever, the Prince inquires, how could their neutrality be taken seriously is Cambodia maintained diplomatic, commercial and other relations exclusively with the Western bloc? Prince Sihanouk revealed that although China has given, with no strings attached, $25 million in economic aid, they do not forget that American economic and military aid to Cambodia amounted to $40 million for the 1957 and 1959 budgetary year and that it also was offered unconditionally, as is the aid offered by France, for equipment. But, the Prince explains, he wishes aid would be less rigid, particularly American aid since its purpose is to provide the Cambodians with the framework of a modern state.

Finally, the Prince wishes Americans to clearly understand they are not Communist inclined nor flirting with the Reds; certainly Americans must know that the first concern of the Communists is to get rid of the King and the natural elite of any country they succeed in laying hands on.

I would like to close this salute to Cambodia on this 6th day of March 1959, by giving expression in the Congress of the United States to the words of Prince Noradom Sihanouk which appeared in Foreign Affairs, July 1958, for I am convinced the explanation of their policy and the wisdom which undergirds it should be at our fingertips hereafter when we discuss our relations with the Afro-Asian bloc countries:

If I have no particular liking for communism, neither have I any cause or means to join a crusade, even a moral one, against the nations that have adopted that ideology and which since 1954 have not given my country sufficient grounds for complaint. It would be absurd to suppose that a tiny country like mine, geographically situated as it is, would risk provoking the Chinese and Soviet colossi now that planes fly so fast and rockets so far.

We are not a breach in the Western bloc merely because we cannot be a rampart. In the event of a world conflict, we might very well become one of the first victims of a harsh occupation. In that case, the free world would have other things to do besides undertaking our liberation, or rather the liberation of what little remained of us.

Are we selfish or wrong-minded in thinking as we do? I maintain that we are merely being realistic. By practicing a genuine neutrality which eliminates any pretext for aggression we have a chance of not bringing down a storm on our heads; and a storm can be dangerous where there is no lightning conductor.

Our precautions may be to no avail and we may one day be invaded notwithstanding them. (I am not afraid of internal subversion which stands no chance here). If, in spite of our manifest good intentions and our utter propriety in respect to the blocs, one of these should attack us, then I would be the first to advocate reconsidering our policy and invoking aid from the opponents of our aggressors. I profoundly hope that our country will never have to take such a step.

I have quoted here at length the expressions of an Asian country, friendly disposed toward the West but with a mind of its own; with a program for survival that is consistent with its strategic relationship and the aspirations and needs of its people. They are loud and clear enough for all to hear with the force of determination and maturity. It is important that we of the United States listen, comprehend, and react intelligently to the rising expectation unleased in this world and gage our actions accordingly. We must lower our anchors and prepare to ride the tide on an equal surface with justice and humility toward all.

Presidential Commission on the Blind

EXTENSION OF REMARKS
OF
HON. JOHN E. FOGARTY
OF RHODE ISLAND
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 11, 1959

Mr. FOGARTY. Mr. Speaker, I am introducing a bill to provide for the establishment of a temporary Presidential Commission to study the potentialities, problems, and needs of blind persons in the United States in relation to the various federally supported services and programs designed to assist them. The need for a comprehensive, authoritative, and objective study of this type has become increasingly apparent during the past several years. The rapid growth and development of service programs as a result of legislation enacted during and since World War II; changing concepts in rehabilitation, education of the handicapped, social insurance, and social welfare in general; changing public attitudes toward the blind; the steadily increasing population of blind persons—all of these factors emphasize the necessity for a high-level study of programs and services for blind persons in order to objectively determine the adequacy of existing services and to recommend improvement in the light of present and future needs.

My bill would provide for such a study of services and programs supported to any extent by Federal funds with the exception of medical research. As my colleagues know, I have been an advocate of increasing Federal support for medical research as the best hope for eliminating the killing and disabling diseases of mankind; and I will continue to be a strong advocate of effective medical research. However, our concern in this bill is for those persons who must make their way in life without sight—the several thousand premature babies of a few years ago—now of grade-school age—who lost their sight because of excessive oxygen in incubators before the cause was discovered and eliminated, the men and women who are blinded each year in industrial and other accidents, and those who lost and continue to lose their sight through diseases whose cure and cause are not yet known. We are interested in learning how we can better assist such people to become full participants in the economic and social life of the Nation.

My bill calls for a Study Commission consisting of nine members to be appointed by the President from among prominent persons in public and private life and the pertinent professions. It authorizes the employment of a full-time staff and permits the utilization of specialists from voluntary agencies for short periods of time without compensation except for expenses. The duration of the study would be 2½ years, and a total appropriation of $450,000 would be authorized to carry it out. This

amount would cover a per diem allowance of $50 and travel expenses for members of the Commission, salaries and travel expenses of the staff, printing of the final report and staff background documents, office supplies, and the like, for the entire 2½-year period.

The Commission is charged with studying existing Federal laws which provide services or benefits to blind persons; with studying and evaluating the standards of these services; and with formulating and recommending standards where none exist, in addition to any other recommendations it may make for improvement of services. Thus, programs and benefits for blind persons administered by several Federal agencies would be covered as would State programs in which the Federal Government participates financially. Only those voluntary agencies which participate in Federal programs through the purchase of products, such as workshops for the blind, or through the purchase of services would be included.

I know that the study provided for in this bill will result in improving services to blind people and make it possible for many more of them to take their rightful places in the productive life of our Nation.

National Safety Council Award to the Boy Scouts of America

EXTENSION OF REMARKS
OF
HON. ROBERT R. BARRY
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 4, 1959

Mr. BARRY. Mr. Speaker, under leave to extend my remarks in the RECORD, I think it is indeed fitting, in view of the fact that National Boy Scout Week has just passed, that I include herein the remarks of Maj. Gen. George C. Stewart—retired—executive vice president of the National Safety Council, in presenting the National Safety Council Award of Honor to the Boy Scouts of America at the Hotel Statler, Washington, D.C., on February 10, 1959:

REMARKS BY GEN. GEORGE C. STEWART, EXECUTIVE VICE PRESIDENT, NATIONAL SAFETY COUNCIL

This is one of the most pleasant duties I have ever performed.

Like all Americans, I have always had the highest admiration for the Boy Scouts of America. I feel strongly that they are unsurpassed as a powerful force for a better citizenry. I can't imagine this country without the Boy Scouts.

You can imagine, then, how delighted I was, how delighted all of us were, when the Boy Scouts chose safety for their good turn program for 1958.

I am told that all 535 councils of the National Boy Scout organization participated in the program for a total of 28,728 traffic, 20,824 outdoor, and 48,225 home safety projects. These 97,800 projects represented 17,312,000 boy-hours of Scout activity.

This tremendous impetus to a safer America seemed to the National Safety Council to dramatically typify and demonstrate the power of the Boy Scouts and of youth in general to lead the way to a better life in this country.

No one can reckon the results of what the Boy Scouts did for safety in 1958. But the facts are that the traffic death toll came down 1,700 in 1958 from the preceding year, that deaths from home accidents came down 1,000, and that outdoor accidental deaths also came down 1,000—a total in those 3 categories of 3,700.

The National Safety Council sincerely believes that the safety efforts of the Boy Scouts played an important and essential part in achieving that substantial saving in human life.

Certainly there is no more direct or effective way to emphasize safety within the family circle than by having it presented by the boy of the house.

Believing as we do that the headquarters of the nationwide war on accidents is the American home, and that the supreme command in that war is the family circle, we naturally regard the Boy Scout Safety Good Turn program as a major development in this war.

It is a perfect example of two public service organizations working together in the public interest, the council utilizing its technical knowledge and experience in accident prevention, and the Boy Scouts devoting their huge membership and prestige to turning that knowledge and experience into action to prevent accidents.

The Board of Directors of the National Safety Council have unanimously and enthusiastically voted to confer the council's top award—the Award of Honor—upon the Boy Scouts of America for their great contribution to a safer America, the most significant contribution to accident prevention ever made by a youth organization.

It is my great honor to present this award to Dr. Arthur A. Schuck, chief scout executive.

The Turbine Mess

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 4, 1959

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include a very interesting article by Mr. Charles Hannan entitled "The Turbine Mess," which appeared in the February 27, 1959, issue of Electrical Union News, Local 201, IUE, AFL–CIO, published in Lynn, Mass.

THE TURBINE MESS

(By Charles Hannan)

Why are turbine contracts, for which the U.S. Government puts up the money, going to foreign firms rather than to American companies?

Why? Because U.S. Congressmen and American firms, like the General Electric Co., Westinghouse, etc., have failed to press for a change in a law that both the Congressmen and the industrialists know is out of date.

Back in 1938, Congress passed a law on work contracts for which Government agencies put up the money through loans. This law said that if the bid of an American firm was within 6 percent of the bid of a foreign firm, preference should be given to the American firm.

This was a good law in 1938. The 6 percent reflected the actual differences in economies, wages, and living conditions between this country and foreign countries.

But everyone with a half a brain knows that the American standard of living is now much higher than the standards prevailing in Europe. The difference has been growing all the time.

The leeway on bidding today should be about 40 percent at least. The Congress, which passed the first law in 1938, knows this. So do the officials of big companies like GE and Westinghouse, who must offer bids in competition with these foreign firms—and with only a 6-percent leeway.

Why haven't the Members of Congress done something about this? The fact that the difference is much greater than 6 percent has been apparent for years. Why haven't the American firms that have to bid in competition with the foreign firms done some shouting about the antiquated law? Don't they really want business?

Representatives of Local 201, the International IUE–AFL–CIO, Congressman THOMAS J. LANE, some GE representatives, and the Congressional Action Committee of the Greater Lynn Chamber of Commerce have been the only ones to protest this situation, which is leading to the destruction of our turbine business.

Why haven't our Representatives in Congress screamed for a change that would prevent this outrage on the American public?

This is a fight for survival, and we're all in it—like it or not. How about a fight like that put up by Senator HUGH SCOTT, of Pennsylvania?

In the Baldwin locomotive contract fiasco, when work was being given to foreign bidders, Senator SCOTT hollered, screamed, and banged away until the award was reversed.

From whence come the pressures that leave such obvious loopholes through which foreign companies enter to destroy us?

You are in the position of paying taxes, losing your job, and then paying some foreign company to do your work.

So how come there isnt a big, big noise being made by our elected representatives? And here, my friend and fellow worker, is the $64 question: How come companies like GE, Westinghouse, Delaval, Allis-Chalmers, etc., have so little concern for business and their own people as to remain mum until the contracts were awarded to Brown-Boveri of Switzerland and Parsons, Ltd.?

Manufacturers who bid on contracts such as these know what other companies are bidding. Why haven't American firms blown the whistle on the unfair law, when they knew Brown-Boveri and Parsons submitted bids?

Why didn't they come out and say to you and me: "We have a problem, a serious problem. This is a battle for survival. We have to do something, and fast, and we need your help."

No. They wait until "the chickens have flown the coop." Then they start crying about what they lost.

The minute that GE, Westinghouse, et al, knew that these foreign firms were bidding, they knew immediately, that due to the existence of the antiquated law, they had no chance whatsoever of getting the contract awards.

What chance is there in the future of competing with these foreign companies, as long as the bids of American firms can be only 6 percent over those submitted by foreign firms.

Brown-Boveri underbid GE by 40 percent, and Parsons underbid by 60 percent. These foreign companies are making profits even with bids this far below ours.

Even if we (by some miracle) were able to cut our bids by 60 percent, the foreign firms could reduce their bids by 10 or 15 percent and still make a profit.

By the time that automation, cost reduction, job combinations and other corner
